PREFACE

Although the Brahmasūtras, otherwise known as the Vedāntasūtras, with the Bhāṣhya of Śaṅkarācārya have been published over half a dozen times in India, with and without the sub-commentaries upon the Bhāṣhya, it is a fact that none of these editions—not even those issued by the Nirṇayasāgara—approach the Ānandāśrama edition in the accuracy of the text. I have mainly followed that edition (where alone variants from Mss. are noted), except in the matter of punctuation and the objectionable practice of the double *avagraha* (which is a veritable monstrosity!). I have, however, changed some few readings on the authority of Ms. evidence, and supplied the accidental lacuna in Sūtra 19 of Pāda 1. In one case (II. ii. 19, line 1.6) a conjectural emendation, fully discussed in the notes to the passage, has been introduced into the text, enclosed within brackets and placed immediately after the current reading. Otherwise the main improvement made in the text of the Bhāṣhya has been in the matter of its presentation. All quotations in the Bhāṣhya, for instance, have been made to stand out on separate lines, and I have been at pains in verifying the references in the Bhāṣhya, particularly those on Mīmāṃsā matters, of which last many will be found given here for the first time—even Deussen not having listed the same.—The references to the Mahābhārata are to the Kumbhakoṇam edition.—The text has been divided into paragraphs, and sub-paragraphs within a paragraph are marked off by a double line or *daṇḍa*. And I have, for facility of reference, numbered the lines of the Bhāṣhya by threes, separately for each sūtra.

In the Notes I have drawn freely upon all available commentaries, important extracts from which are supplied—rather too few, as some may think, than too many. I have rarely attempted verbal explanations, but have sought mainly to set forth the underlying philosophical concepts, which, in a work

of this kind, matter more than the words. For flowing, philosophic style, perspicacity of reasoning, and high intellectual calibre, the portion here presented is admittedly one of the best introductions to Indian philosophical literature that can be found; and my main purpose in writing the Notes has been to promote an intelligent study of Śaṅkarāchārya's philosophy. Hence I have noticed varying interpretations of the other Bhāshyakāras, have weighed them critically, and have not shrunk from even expressing at times a preference for them. Once in a while (cp. II. i. 23, II. ii. 44, etc.) I had to find them *all* wanting, and even attempt an independent interpretation of my own—although, of course, that was merely to show what way the desideratum might lie.

As the first two pādas of the second chapter are regularly prescribed as texts for those Philosophy students of our University who elect the Philosophy or Śaṅkarāchārya for their M. A. course, and as a large majority of these students do not always feel at home in the original Sanskrit, but have to depend upon an English translation, I have deemed it necessary to furnish such a translation, the more so as Thibaut's excellent translation in the Sacred Books of the East has long run out of stock. That translation is also a bit more free and, once in a while, somewhat inaccurate. I have of course tried my best to make my translation readable by itself (and understandable without a concurrent reference to the original text!); and have for that purpose eschewed all avoidable intrusion of Sanskrit words bodily into the English of the translation.—For the present edition the translation has been carefully revised and all minor inaccuracies removed. In the translation I have thought it more convenient to refer to the pages of the original text, these being given in thick type within square brackets in the body of the translation.

I had intended to append to this edition a full introduction discussing the date, works, and philosophy of Śaṅkarāchārya and a number of other kindred topics. But upon second thought I have deemed it proper to reserve this for a

volume of extracts from Śaṅkarāchārya's works, arranged as a philosophical whole, which I have compiled in connection with another undertaking. In the meantime, and pending the publication of that other work, I may be permitted here to refer the students to my *Basu Mallik Lectures on Vedānta Philosophy*, where the above topics have been succinctly set forth.

The first edition of the present work was published in 1923-1924 in two parts. And although it was primarily designed for University students, it would seem that it has found favour with a much wider class of readers. And I have received several appreciative communications about it from diverse quarters. On the 18th of September, 1924, the late Professor Garbe of Tübingen wrote; "Ihr Buch über Brahmasūtras II. 1, II ist eine Leistung von hervorragender Sorgfalt und enthält in den Noten wichtige und scharfsinnige Beobachtungen." On the 23rd of October, 1924, Prof. Sylvain Lévi wrote from Paris, "I thank you warmly for the kind presentation of so many interesting papers, which I could enjoy thoroughly, as they came in vacation-time. I can say that I have read all of them through, even, or rather chiefly, your extracts of Brahmasūtras and Śaṅkara's Bhāshya. You will hardly believe it, but the fact is that I was just engaged on the 2nd Adhikaraṇa, as I am editing two texts of Buddhist Vijñānamātra philosophy. You came as a blessed help. I cannot thank you enough for your substantial Notes. That is the way how Śaṅkara has to be treated: a well-deserved respect, but no superstition. He had a wonderful power of mind, but, as a man, he had his prejudices and, under his logical apparatus, he was passionate enough to be sometimes an unfair antagonist. This makes his personality so much more attractive." Dr. F. O. Schrader, on the 17th of May, 1926, wrote from Kiel: "Only quite recently I came across your edition of Śaṅkara's Bhāshya on Brahmasūtra II, 1 and 2 and found it so excellent that I purchased at once a copy also for our Indogermanisches Seminar. This is a most useful and stimulating work: exactly what is wanted for young students of Indian

Philosophy." From several Indian students and Professors also I received warm appreciations coupled with pressing requests to translate and annotate along the same lines the whole of the Śāṅkarabhāṣya on the Vedāntasūtras, or failing that, in any case the first four sūtras of the Bhāṣya : the Chatuḥsūtrī. Since, however, I have now reached a stage of life when I ought to concentrate all my efforts on the completion of the engagements already undertaken, rather than accept any fresh ones howsoever tempting, I had to resolutely decline being dragged away by this last suggestion, which I know was most kindly and sincerely meant. The first edition having become somewhat out-of-date, a second edition was urgently called for ; and in view of the reception accorded to the first edition, I could not well decline the responsibility of putting forth a second and revised edition on the market, although it involved the expenditure of a considerable slice of my time, already requisitioned for earlier and more pressing undertakings. My work of the revision of the Notes in particular was considerably facilitated by suggestions for improvement that I received from several Colleagues who had to teach the work ; and special mention is due in this connection to certain acute and detailed comments that I have received from Professor M. Hiriyanna of Mysore. Although the net additions made to the Notes in the present edition extend to more than forty pages, I feel that there may be yet found scope for further improvements. I have therefore to repeat to students, colleagues and scholars who may have occasion to read this edition, the request already made in the earlier edition to communicate to me all errors of omission and commission and all other deficiencies that may be noticed herein, and the removal of which may tend to make this edition of some of the best that one of the greatest philosophers of India has written as useful and informing as possible to those for whom I was led to undertake this task.

To the present edition I have added, in the hope that it may be serviceable to the students, a Glossary of important technical terms from the text here presented, together with

their English equivalents. In the first edition the Index took cognisance of the Notes only. In this edition the scope of the index (the work of my student-friend, R. D. Vadekar, M. A.,) has been enlarged so as to include the Translation. The excellent get-up of this edition is entirely to the credit of the Secretary and staff of the Ganesh Printing Works. Nevertheless the printing of the work in time could not have been achieved if the Manager of the Arya-Bhushan Press had not also, with his usual courtesy, lent a helping hand by printing the concluding portion of the Notes, the Glossary, and the Index. This necessitated giving a separate pagination to the Notes. The Translation, it will be noted, has been thrown in the beginning right by itself, in the hope that non-Sanskritists may be induced thus to make their first acquaintance with Śaṅkara's masterpiece.

Om, Tat Sat : Brahmārpaṇam astu.

BRAHMASŪTRAS II. I-II

WITH

THE COMMENT OF ŚAṆKARA

ENGLISH TRANSLATION

CHAPTER SECOND

QUARTER FIRST

TOPIC I : HETERODOX SMRITIS

(*Sūtras* 1-2)

[Page 1] In Chapter First it was demonstrated, by establishing the consensus of the Scriptural passages (on the points), that the Omniscient Overlord is the cause of the world's origin, like clay, gold, and so forth of pots, ornaments, and other articles; that of the world thus created, He is the cause of stability, as being its controller, like the magician of his magical-illusion; that of the extended world, He, finally, is the author of the re-absorption into His own self, like the earth of the four classes of beings; and that the same Lord is identical with the Soul of us all. The doctrines putting forth Pradhāna and the like as the (First) Cause were also refuted as being not borne out by the Scriptures. Now is commenced Chapter Second, which is to deal with topics such as : the refutation of the objections based on Smritis and on Logic against our own position [Quarter 1]; the presence of fallacious dialectics in the Pradhāna and other theories [Quarter 2]; and the absence of inconsistency in the creation and other theories set forth in the several Vedānta-texts [Quarters 3 and 4]. To begin with, the Author puts forth the alleged contradiction (of our theory) with certain Smritis, and then sets it aside :

If it be objected that our position is open to the fault of leaving no scope to certain Smritis, we demur, as there would otherwise result the fault of leaving no scope to certain other Smritis. 1

The statement that Brahman alone, the Omniscient, is the cause of the world is not admissible. Why ? Since there results

the fault of leaving no scope to certain Smṛitis. Thus there is the Smṛiti known as the Tantra, composed by the Great Sage, and regarded authoritative by those-entitled-to-respect, and other (Smṛitis) also based upon the same, which would all have no scope (at all) in your theory. For, in these Smṛitis the non-intelligent Pradhāna is set forth as an independent cause of the world. As to the Smṛitis of Manu and others, they do have a scope inasmuch as they fulfil their anticipated purpose by prescribing various religious-duties like fire-worship (Agnihotra), which are laid down as injunctions: namely, that a specific caste is to have at a specific period its ceremony of Initiation performed according to specific ritual; that a specific course of conduct is to be followed (after the Initiation); that the Veda is to be studied in a particular mode; that the return (after completion of study) is to be accomplished in a given manner; and that a particular is the method of cohabitation with one's lawfully-wedded wife. Likewise do they prescribe different religious-duties proper to the castes or the life-periods (āśramas) and calculated to secure goals attainable by mankind. But there remains no such scope for the Smṛitis such as those of Kapila and others in regard to the exercise of some kind of an activity. For, these were composed [Page 2] with the exclusive object of teaching the right knowledge that is the means to Liberation. And if these are to have no scope in that connection also, there would result an entire purposelessness of them. Therefore, you must interpret the Vedānta-texts so as not to contradict the (teaching) of these (Smṛitis). — But how can the teaching of the Scriptures, viz., that Brahman, the Omniscient one, is the cause of this world,—after it has been once established by arguments like that [in Brahmasūtra, I. i. 5] about the "Seeing"—be again open to the attack on the ground of the fault of not leaving scope for certain Smṛitis? This attack (we reply) would be nugatory in the case of persons of independent intellect. But the generality of the people, lacking such independent intellect and so unable to ascertain the sense of the Scriptures independently, would have to depend upon Smṛitis composed by celebrated authors, and would accordingly endeavour to ascertain the sense of the Scriptures with their help; and they would have no reliance upon the interpretation put forth by us by reason of their reverence for the authors of these Smṛitis. That sages like

Kapila and others had unobstructed intuitive knowledge is declared in Smṛitis. There is also the Vedic text [Śvetāśvatara, v. 2] —“He who, in the beginning, supports by knowledge that sage Kapila when born, and who would see him while being born.” Hence it is not possible to imagine that the opinion of such persons is not conformable to truth. For they, moreover, establish their view by taking the support of reasoning also. Therefore, the objection is repeated that we must interpret the Scriptures in consonance with these Smṛitis.

This is our rejoinder. We deny (your contention), as it would lead to the fault of leaving no scope to certain other Smṛitis. If, on the ground of the fault of leaving no scope to certain Smṛitis, the view that the Lord is the cause is objected to, then in that case the other Smṛitis proclaiming the Lord as the cause would be void of any scope. We will cite these: Having introduced the Highest Brahman with the words [Mahābhārata, xii. 342. 30]—“That which is subtle and beyond knowledge,”—and having affirmed [ibid., xii. 342. 31]—“He is indeed the Inner Soul of all beings and is styled ‘Knower of the Field;’”—the text declares [ibid., xii. 342. 32]—“From Him, O Best of the Twice-born, the Unevolved, consisting of the three guṇas (aspects) sprang forth.” Also in another place [ibid., xii. 347. 31]—“The Unevolved, O Brahmin, is absorbed into the Person who is free from Qualities.” (And again), “Listen, accordingly, to this condensed statement: ‘The ancient Nārāyaṇa is all this; he creates everything at the creation-time and again consumes it (all) at the sublation-period.’”—This is declared in Purāṇa [cp. Mahābhārata, xii. 307. 115]. And in the Bhagavadgītā [vii. 6] it is said: “I am the source as also the dissolution of the entire world.” Āpastamba [Dharmasūtra, i. 8. 23. 2] likewise declares with reference to the very same Highest Soul: [Page 3] “From Him spring all bodies; He is the root, the eternal and the unchangeable.” Thus in many a place even the Smṛitis show forth the Lord as being both the constituent and the efficient cause.

That unto an opponent who has based his objection on the strength of Smṛitis I should reply on the strength of the Smṛitis themselves—for this purpose it was that the fault of leaving no scope to Smṛitis was above set forth. That the Scriptures pur-

port to declare the Lord as the cause has been already shown. Hence when there ensues a conflict between Smṛitis so that only one (set) of them can be accepted and the other rejected, those Smṛitis that conform to the Scriptures are authoritative, the others being disregarded. This is declared in the treatise on Valid-proofs [Jaimini Sūtra, i. 3. 3]—"When there is contradiction (of a Smṛiti with an existing Śruti or Scriptural text) the Smṛiti is to be disregarded; and where no Śruti (corresponding to a Smṛiti) is preserved, an inference (of its existence is to be made)." That any one can know matters beyond the purview of the senses without (the help of) the Scriptures, it is not possible to imagine, as there is no (valid) ground for it. (If one were to assert) that it is possible for perfect-sages like Kapila, as they have an unhindered knowledge (of everything), the reply is, No: for, this perfection is contingent. For, the perfection ensues from religious practices, and these are to be had from injunctions (given by the Scriptures). Hence the meaning of an already existent (Scriptural) injunction cannot be called into question on the strength of the words of a perfect-sage, who comes into existence after (the Scriptural injunction). And even if one were to turn to these sages (for the right interpretation of Scriptures), yet, as there are many such sages, whenever there results, as before indicated, a conflict between Smṛitis, there remains no mode of reaching a decision unless one resorts to the Scriptures. And for one who (is not such a perfect-sage, and who) derives his knowledge from others, it is not proper to conceive without reason a partiality for some specific Smṛitis, since, if one were to have such a partiality for some particular text, seeing that the opinions of people are extremely divergent, there would ensue the contingency of an absence of all definiteness as to the Reality. Hence, even the mind of such a (misguided) person one should endeavour to enlist to the right path by setting forth the divergent teachings of the Smṛitis, and asking him to discriminate between them according as their doctrines follow or do not follow (the teaching of the Scriptures).

As to the Scriptural-text exhibiting the perfection of knowledge of Kapila which was cited, on the strength of that it is not possible to rely upon Kapila's view even though it be against the Scriptures: for, the text contains merely the general word "Kapila"

and we know from Smṛitis of another Kapila, Vāsudeva by name, who burnt down the sons of Sagara; and furthermore a passage can have no power (for establishing one thing) if its main topic be another thing, as it would then lack all probatory force with reference to the first thing. We also have another Scriptural-text proclaiming the greatness of Manu [Tait. Saṁ, II. ii. 10. 2] —“Whatsoever Manu has declared is medicine.” And Manu has praised the oneness of the Self pervading all things with the words [xii. 91]—“One who sees the Self in all beings, and all beings in the Self makes the (true) offering to the Self, and so wins Self-empire”—and so it follows [Page 4] that he reprobates the opinion of Kapila. For, Kapila does not acknowledge the doctrine of the oneness of the Self in all, as he assumes a plurality of the Selves. In the Mahābhārata [xii. 360. 1] also, after raising the question: “Are there, O Brahmin, many persons or only one?”—and setting forth the opponent’s view [ibid., xii. 360. 2]: “O King, there are, according to those that adopt the Sāṁkhya-Yoga view, many persons,”—the text refutes that view by the passage beginning with [ibid., xii. 360. 3]: “Just as of several persons there is only one source of origin (viz. the earth), so will I declare to you that Universal Person, excelling in qualities”; and it goes on to establish the oneness of the Self in all [ibid., xii. 361. 4-5] by the words: “The Self within me and that within thee and the others that are encased in the different bodies: of them all He is the spectator, not to be perceived by anyone anywhere. He is all-headed, all-armed, all-footed, all-eyed, all-nosed: the one who moves unhindered and at will amidst all the beings.” There is also a Scriptural text about the oneness of the Self in all [Īśa Up., 7]—“When unto the knowing individual all the beings have become one with his own Self, what infatuation, what misery, can there be for that one who realises the oneness (of all)?” Hence it is proved that the theory of Kapila runs counter to Veda, and to the words of Manu who follows Veda, also in its view about the plurality of the Selves, and not merely in its hypothesis of the Prakṛiti as an independent First Principle. As to the Veda of course its authoritativeness in its own subject is not contingent upon anything, any more than that of the Sun in the matter of form-and-colour; whereas that of merely human statements is contingent upon some independent external basis (the Veda or the actual reality), and is

further estranged (from reality) by the intervension of the speaker's memory. Hence in matters that go against the Vedas the objection that certain Smṛitis would be deprived of all scope is no objection. 1.

And for what further reason is the contention that certain Smṛitis would be deprived of every scope, not valid?—

And because there is no finding of the others. 2

Entities other than the Pradhāna, and as the evolved products of the Pradhāna, which are imagined in the (Sāṅkhya) Smṛiti, viz. the Mahat and others, are not met with either in the Veda or in ordinary experience. As to the elements and the organs, these can be asserted in the Smṛiti-text as they are well-established in the world and in the Veda; but Mahat and others to which neither experience nor the Scriptures bear testimony [Page 5], the Smṛiti can have no right to assert, any more than to assert an object cognisable by a sixth sense-organ (there being only five of them). And what appears to be a scriptural warrant for the entities in question has been explained by us as not referring to them in the Sūtra I. iv. 1, beginning with the words—"If it be urged that even the inferred entity (Pradhāna) in some textsetc." The point is that if the Smṛiti-statement is untrustworthy in respect of the effects, it is fit that it should not be trusted in respect of the (First) Cause taught by it. Hence also that a certain Smṛiti becomes devoid of all scope is no defect. As to the support from reasoning (sought for the Smṛiti) the Sūtrakāra will demolish it in the portion beginning with Sūtra II. i. 4—"No: by reason of the disparity-in-nature, etc." 2. Here ends the Topic (1) called Heterodox Smṛitis.

TOPIC 2 : YOGA-SMṚITI

(Sūtra 3)

Thereby is Yoga refuted. 3

By this refutation of the Sāṅkhya-Smṛiti even the Yoga-Smṛiti is to be understood as refuted: so he extends the application (of the same arguments). For, even in that Smṛiti are assumed, in

contravention of the Scriptures, Pradhāna as an independent first cause as well as Mahat and others as effects, none of which are warranted by experience and by the Scriptures. If that be so, because there is the application of the same reasoning, this is already implied in the preceding. Wherefore, then, make a special analogical transference? (We reply :) There is here a special cause for doubt, inasmuch as the Yoga is laid down as the means to right knowledge in Vedic texts like [Br̥h. Up., ii. 4. 5]—"The self is to be heard, thought of, meditated upon"; while we observe in the Śvetāśvatara Upanishad [ii. 8] Yogic prescriptions with manifold details beginning with the assuming of postures etc. in passages like—"Having rendered the body with its three erect parts (the trunk, the neck and the head) even ..". And there are to be found thousands of references to the Yoga in the Veda, such as [Kāṭha, II. iii. 11]—"The steady curbing of the senses is what they call Yoga"; or [Kāṭha, II. iii. 18]—"This teaching as well as all the prescriptions about Yoga"; and so forth. In the Yogasāstra itself with (the Sūtra)—'Now, the Yoga, the means to the perception of Reality'—Yoga is acknowledged to be a means for right knowledge. Hence inasmuch as a portion of it is acceptable, the Yoga Smṛiti would become altogether free from objection, like the Smṛiti teaching the "Ashtakā" rites. It is this additional cause for doubt that is being removed by the analogical transference; since, although a part of it is acceptable, there is seen to be, as pointed out already, a divergence as regards another part of its teaching.

[Page 6] Although many are the Smṛitis treating of the soul and kindred matters, a special effort has been made to refute just the Sāṅkhya and the Yoga Smṛitis. For, Sāṅkhya and Yoga are well-known in the world as the means of reaching the highest end of man, are so accepted by persons-entitled-to-respect, and are armed with specific references to them in the Scriptures, viz. [Śvet. vi. 13]—"Having known that Cause, attainable by Sāṅkhya-Yoga—the God—one is freed from all fetters." The way out is given by the consideration that it is not by Sāṅkhya-knowledge or Yoga-method independently of the Veda that the highest goal is achieved. For, Śruti itself [Śvet., iii. 8] discountenances any other means of reaching the highest goal save the Vedic teaching of the oneness of the Ātman—"Knowing Him

alone one goes beyond Death : there exists no other path for going (beyond)." The Sāṅkhya and the Yoga followers are dualists : they do not recognise the oneness of the Ātman. And as to the Śruti-text cited [Śvet., vi. 13]—"That cause, attainable by Sāṅkhya-Yoga....." etc,—even there one must conclude that the knowledge and the meditation implied by the words Sāṅkhya and Yoga are no other than what the Veda gives, as is clear from the context. And we quite acknowledge that the Sāṅkhya-Yoga Smritis, in that portion where they do not contradict (the Veda), do have a claim to authoritativeness. For instance, the Sāṅkhyas assume the non-contamination of the Puruṣa by declaring him to be above all qualities ; and this is also vouched for by Śruti-texts like [Brih., iv. 3. 16] : " This person is free from attachment." So also the followers of Yoga prescribe house-less life and so forth, and in that conform to the teaching concerning renunciatory attitude well-known to Śrīptural-texts like [Jābāla, 5]—" And then the wandering-ascetic with a discoloured raiment, shaven, and rid of all possessions.....".—The preceding reason should be taken to have refuted all Smritis founded upon reasoning (as opposed to Vedic Revelation). If these be thought to aid the perception of Reality by teaching how to reason and excogitate, let them do so. Our point is that the knowledge of the Reality proceeds merely from Upanishadic texts, as is clear from passages like [Tait. Br., III 12. 9. 7]—" No one not knowing the Veda can have an idea of that Great One," or [Brih., iii. 9. 26]—" I ask unto thee that Person taught (only) in the Upanishads." 3. Here ends the Topic (2) called Yoga-Smṛiti.

TOPIC 3 : DISPARITY IN NATURE

(*Sūtras* 4-11)

No: by reason of the disparity of this (world) [from Brahman]; and its being so (we learn) from the Scripture. 4.

[Page 7] To the view that the Brahman is the efficient as well as the constituent cause of this world, the objection based upon Smritis has been refuted. Now is to be refuted the objection based upon reasoning. How (one might ask) can there be room for an objection based upon reasoning urged against this

Vedic view already demonstrated? For, must not the Veda be deemed absolutely valid in its teaching concerning the Brahman, as in that concerning religious-practice?—This might have been a bar to further procedure if Brahman had been an entity cognisable only by the Scripture, and not open to the other means of knowledge, like unto religious-practice, which implies a specific course of action. But Brahman is declared to be (not the result of a process of action, but) an already accomplished entity; and in the case of such an accomplished and existing entity, for instance the earth, there is scope for the activity of other means-of-knowledge. Hence, just as, whenever Scriptural passages contradict one another, all the other passages are so interpreted as to conform to one specific passage, even so, when there is a conflict between the Scriptural passage and another means-of-knowledge the text in question ought to be always so interpreted as to conform to the means-of-knowledge. The more so, as reasoning comes nearer direct experience inasmuch as it establishes an unseen object on the analogy of a seen object; whereas the Scriptural passage is further removed (from experience) because it tells what it wants to tell as a mere “so it was.” And Brahma-knowledge becomes admittedly a means to absolution after removing away all ignorance only when that knowledge results in a realisation in one’s own experience: that being its actual, tangible fruit (distinguishable from the remote, intangible fruit of the Dharma or religious practice). Scripture itself [Br̥h., ii. 4. 5] says—“The Ātman is to be heard, to be reflected upon.....”, and in this, by prescribing a ratiocination in addition to mere hearing, it shows that reasoning also is to be duly resorted to. Hence, once more, we repeat our objection on the basis of reasoning: “No: by reason of the disparity of this (world) [from Brahman].”

The assertion that the sentient Brahman is the cause and constituent of the world cannot be maintained. Why? Because this (world, the) effect is disparate-in-nature from its constituent-cause. For, this world which is alleged to be an effect of the Brahman is seen to differ in nature from Brahman, being non-sentient and impure, whereas Brahman is different in nature from the world, since the Scriptures declare it to be sentient and pure. And we nowhere observe the relation of cause and effect between things disparate in nature. For, effects like ornaments

can never be produced from the clay, nor pots and the like produced from gold. It is out of clay alone that products possessing-clay-characteristics are produced, and out of gold alone, those possessing-gold-characteristics. So similarly, this world possessing the characteristics of pleasure-pain-infatuation can properly become the effect of a cause which is constituted of the characteristics of pleasure-pain-infatuation, and not of Brahman, which is disparate-in-nature from it. And as to this disparity of the world from the Brahman it can be inferred from the appearance of impurity and non-sentiency. For, the world certainly is impure being constituted of pleasure, pain, and infatuation, as giving rise to happiness, affliction, and dejection, and producing conditions high and low like the heaven and the hell. The world is likewise non-sentient inasmuch as it makes up the bodies and the organs, and so subserves the purposes of a sentient being. For, where there is parity-in-nature there cannot obtain [Page 8] the relation of the principal and the auxiliary. Two lamps, for instance, cannot subserve each other's purpose.—One might urge against this that, on the analogy of the master and his servant, even a sentient body and instrument can subserve the purpose of the experiencing-soul. But no. In this case of the master and the servant it is the non-sentient part of the latter that subserves the purposes of the former who is sentient. It is, that is to say, just the intelligence and other non-sentient paraphernalia of the sentient servant that subserves the purpose of the sentient master; and it is not the case that the sentient soul (of the servant) does himself become subservient or recalcitrant with reference to the master's sentient soul. The Sāṅkhyas indeed maintain that the sentient souls have a nature not liable to accretion or depletion, and are devoid of any activity. Therefore the body and the organs (and all things that serve as instruments) are non-sentient. Nor is there any ground for the belief that objects like logs-of-wood or lumps-of-clay are sentient. In fact this distinction between sentient and non-sentient objects is patent to the world. Hence it follows that because of a disparity-in-nature from Brahman, this world cannot have Brahman as the constituent-cause.

Now, if some one were to say—"On the strength of the declaration in the Scripture to the effect that this world has a sentient being as its cause—I am prepared to conclude that the whole

world is itself sentient, inasmuch as the nature of the constituent-cause is known to continue in its effect ; and that the non-perception of the sentiency can be explained by postulating a peculiar modification of it. Just as, that is to say, in the case of the souls that are of admitted sentiency, we do fail to perceive their sentient character in their states of sleep, fainting, etc., even so there might be a failure to perceive the sentiency in the case of objects like the log-of-wood and the lump-of-clay ; and that on the ground of this very difference between them, viz., the perceptibility and the non-perceptibility (of their sentiency) and the absence and presence of colour and other qualities, we can explain without contradiction the relation of the principal and the auxiliary between the body and the organs on the one hand and the soul on the other, even though both equally participate in sentiency, the present case being quite explicable on the analogy of flesh, soup, rice, etc., which—although all equally earth-products—subserve each other's purpose by reason of the peculiar properties inherent in each,—the same circumstance also serving as an explanation of the well-known fact of the differentiation (of the world into sentient and non-sentient classes).”—One urging these considerations may somehow or other succeed in explaining away the disparity-in-nature based upon sentiency and non-sentiency ; but the disparity based upon purity and impurity he can in no-wise remove.

Nor can he explain away the first disparity, says (the Sūtra) : “ Its being so follows from Scripture.” The sentient nature of all things in the world, even though nowhere an object of anybody's experience, is inferred merely on the strength of the Scriptural assertion about the world having a sentient first cause, because one has an absolute faith in the Scripture. But the inference is contradicted by Scripture itself, seeing that even from Scripture one learns of its being so. By ‘ its being so ’ he implies disparity from the constituent-cause. The Vedic text [Tait. Up., ii. 6] speaks of “ the intelligent and the non-intelligent,” and so asserts that a portion of the world is non-sentient, and from this it follows that the world is different-in-nature from Brahman. 4.

[Page 9] But is it not a fact that in some places in the Scriptures we hear of the sentient character of the elements and sense-

organs, regarded usually as non-sentient? As for instance [Śat. Br., vi. i. 3. 2-4]—"The Earth spoke;" "the Waters spoke;" or [Chh., vi. 2. 3-4]—"That Light saw;" "those Waters saw;" and such other passages, declaring the sentiency of elements. Also concerning the sense-organs we have statements like [Br̥h., vi. 1. 7]—"Those Prāṇas (faculties) indeed, contending for self-supremacy, went to Brahman;" or like [Br̥h. i. 3. 2]—"They then said unto Speech: do thou chant for us"—where the sense-organs are referred to (as sentient). In reply he recites—

But that is a statement concerning the Superintendents, because of specification and correlation. 5.

The word 'but' dispels the doubt raised. We must not at all assume the sentient character of elements and sense-organs from Scriptural passages like—"The Earth spoke," and so forth, since this is a statement concerning the Superintendents. There is here a statement about sentient Divinities superintending elements like the earth, and organs like the speech, and performing activities proper to sentient beings, such as speaking, conversing and so forth, and not about mere elements and the sense-organs. Wherefore? Because of specification and correlation. For, there is a specified difference consisting of sentient-nature and non-sentient-nature between the experiencing-souls on the one hand and the elements and sense-organs on the other, as already mentioned; and that will not be explicable if everything were sentient. Further in the "Dispute amongst the Faculties," the text of the Kaushītakis, with a view to remove the doubt as to mere sense-organs being intended, and to comprehend the sentient Superintendents, makes a specification by using the epithet Divinities: Thus [Kaush. Up., ii. 14]—"These Divinities, forsooth, contending for self-supremacy....."; and further on [ibid., ii. 14]—"All these Divinities, indeed having recognised the pre-eminence of the Life-Breath....". There are also taught everywhere, in correlation (with the elements, organs, and other abodes), such sentient superintending Divinities in the Samhitās, Brāhmaṇas, Histories, Purāṇas, etc. A Scriptural text like [Ait. Āraṇ., ii. 4. 24]—"The Fire, becoming the speech, entered the mouth"—supports the existence of a Divinity guarding over the functions of the sense-organs. Further, in the concluding part of the

passage concerning the "Dispute of the Faculties" [Page 10] statements like [Chh., v. 1. 7]—"And then the Prāṇas went up to their father Prajāpati and said....."—where we are told of their approaching Prajāpati for ascertaining who was pre-eminent, and thereafter, on his advice, of their going out of the body one by one, and so arriving at the pre-eminence of the Life-breath by the method of concomitance and non-concomitance, and then [cp. Bṛih., vi. 1. 13]—of the offer of tributes unto him, —all these dealings, similar to our own, as taught (in the Scriptures) further confirm the statement concerning the Superintendents. We can also understand the 'correlation' as referring to the act of 'seeing' of the highest superintending Divinity (Brahman), as mentioned in the text [Chh., vi. 2. 3]—"That Light saw"—after the Divinity had entered into(become correlated with) the effects produced by it. 5.

Therefore there does exist a disparity-in-nature between the Brahman and the world; and by reason of this disparity the world cannot be an effect of the Brahman. To this objection he now furnishes a reply—

But we do see it. 6.

The word 'but' turns back the (opponent's) objection. The statement that this world cannot have Brahman for its cause by reason of the disparity-in-nature: this is not an absolutely valid proposition. For, we do notice in the world the production, from admittedly sentient beings like men, of hair and nails etc., which are disparate-in-nature from them, as also from admittedly non-sentient things like cow-dung, that of scorpions etc. But (you might reply) it is merely the non-sentient bodies of men etc. that are the causes of the non-sentient hair, nails, and so forth, and so likewise the non-sentient bodies of scorpions, etc. that are the effects of non-sentient things like cow-dung. We answer Even so, that one of the non-sentient effects (body of the scorpion) should have an aptitude to be the abode of a sentient being, while another (hair, nails etc.) should not: this itself does constitute the disparity. And great indeed is the divergence in nature due to the process of evolution between entities like (the bodies of) men and (their products,) the hair, nails, etc., or between things

like cow-dung and (the bodies of) the scorpions and the like, as they so much differ in colour and the rest. For, were the cause and the effect to be absolutely similar, there would be an end to the very relation of cause and effect between them. If, however, it be urged that of entities like (the bodies of) men in regard to (their products,) the hair, nails, etc., or of things like cow-dung in regard to (the bodies of) the scorpions and the like, there is at least the characteristic of "earthness" which is persistent, we reply that if that were all, then of the Brahman in regard to (its products,) the ether and so forth, there is evidently the characteristic of "existence" which is so persistent. In fact, we want you to say whether, when on the ground of a disparity-in-nature you object to the world having Brahman as its constituent-cause, you mean by the disparity-in-nature the non-inherence of the entire mass of characteristics of the (cause) Brahman in the effect, the world; or the non-inherence (in the effect) of even a single characteristic (of the cause), whatever it be; or, finally, the non-inherence of (just one specific characteristic, viz.) the sentiency. In the first alternative there would result the contingency of an annihilation of the very relation of cause and effect throughout; for, in the absence of some specific difference between them, you cannot call one thing the cause and another its effect. The second alternative remains unproven. For, there does persist in ether and other (effects of Brahman) the characteristic of existence [Page 11] which belongs to Brahman, as we have already said. For the third alternative you cannot assign an illustrative example. For, unto the follower of the Brahma-philosophy, what possible example (acceptable to him) can you urge proving that a certain object destitute of sentiency is known not to have Brahman for its cause, seeing that he holds the view that all the mass of effects has Brahman alone as its constituent-cause? The conflict of this your view with the Scriptures is quite on the surface, as we have already proved that the Scriptures purport to teach Brahman as the efficient as well as the constituent cause of the world.

Next, as to the assertion that inasmuch as Brahman is an accomplished, existential entity, there is a possibility of its being open to other means-of-knowledge, that is entirely gratuitous. For, in the absence of colour and other qualities, Brahman cannot be

an object accessible to direct-perception. Also in the absence of (known) inferential marks it is outside the range of inference and the other means-of-knowledge. It is, on the contrary, cognisable only from the Scriptures, like, for instance, religious duty. To the same effect is the passage [Kāṭha, I. ii. 2]—“It is not a knowledge to be obtained by reasoning: it can be best comprehended, My dearest, only when declared by another;” as also another passage (Rigveda, x. 129. 6-7)—“Who indeed has known, and who can here declare.....from whence this creation has emanated?” These two Vedic-stanzas indicate the inscrutable nature of the Cause of the World even for those that might have attained to perfection of power and vision. A Smṛiti also declares [Mahābhārata, vi. 5. 12]—“Those objects indeed that are beyond the pale of thinking—to them one should not apply logic;” and another [Bhagavadgītā, ii. 25]—“He is declared to be non-manifest, unthinkable, and unmodifiable,” as also others like [ibid., x. 2]—“Neither the host of gods nor the great sages know of my origin: I am indeed the source of the gods and of the great sages of every sort.” And as to the view that the Scripture itself, prescribing ratiocination over and above the hearing, seems to assign a place of honour also to reasoning, not by such pretensions can there be gained a possible scope for sheer reasoning. For, it is only reasoning conformable to the Scripture that is here to be resorted to as being contributory to intuitive knowledge; such reasoning, for instance, as—(i) because the true-nature of sleep and the true-nature of waking-life are both exclusive of each other, therefore the soul (who experiences both the states) is in reality unconnected with the attributes of any of them; (ii) because in sound-sleep the soul rids himself of all worldly concerns and becomes of the nature of the Self who is pure existence, therefore the soul is in reality of the nature of that Self who is freed of all worldly ties and whose essence is pure existence; or (iii) because the phenomenal-world springs from Brahman, therefore, according to the axiom that the cause and the effect are non-different from one another, the world has no existence apart from Brahman; and so on. And in the Sūtra [II. i. 11.] beginning with “By reason of the non-stability of reasoning” he is going to exhibit [Page 12] the deceptive nature of mere ratiocination.—Then as to the person who argues on the strength of the Scriptural

assertion about a sentient cause to the world, that the whole world is itself sentient, even he can conceivably explain the Scriptural statement concerning the distinction between the sentient and the non-sentient, viz., [Tait. Up., ii. 6]—"The intelligent as also the non-intelligent"—by declaring (the common characteristic of sentiency) to be manifest in some objects and non-manifest in others. It is our opponent, on the other hand, who cannot explain the Scriptural assertion about the distinction. How? Because in the passage in question, viz., [Tait. Up., ii. 6]—"It transformed itself into the intelligent as also the non-intelligent" the Highest Cause is declared to transform itself and assume the form of the entire world. And just as one that is sentient cannot properly become non-sentient, because the two are disparate-in-nature, even so, one that is non-sentient cannot assume the form of the sentient. We, of course, have refuted the argument based on disparity-in-nature and hence have to assume, just in conformity with the Scripture, a sentient First Cause. 6.

If (you urge that the effect, viz., the world) would become non-existent, we say, No: for, that is a mere negative statement (without an actual object to be negated). 7.

If the sentient and pure Brahman, void of all qualities like sound, is desired to be the cause of an effect which is contrary-in-nature to it, as being non-sentient, impure, and possessed of qualities like sound, then in that case you will have to admit that the effect had no existence prior to its origination; and that would be unacceptable to you, who hold the view of the existence of the effect (in the cause) prior to production. To this contention we reply that it is no valid objection. For, it is a mere negative-statement: It is a mere denial (of the antecedent existence of the effect), and there is no real object to which the negation is to be referred. Neither also can your negative-statement come in the way of the recognition of the existence of the effect (in the cause) prior to the production. How so? Because just as, in the present time, this effect (the world) has an existence only in and through the Cause (Brahman), even so, we can understand it to have an existence also prior to creation. For, surely, even in the present time, this effect has no existence independent and irrespective of the existence of the Cause, as is clear from statements

like [Brih., ii. 4. 6.]—" All would forsake him who recognises anything as existing elsewhere than in the Self. " And the same kind of existence, in and through the Cause, holds good in the case of the effect even prior to the creation. But (we are asked) do you not hold the Brahman, void of qualities like sound and so forth, as the cause of the world ?— (We answer) most assuredly ; but the effect with its qualities of sound and the rest possesses no existence — as apart from its existence in and through the cause—now, any more than prior to creation ; so that it will not be possible for you to urge that the effect remains altogether non-existent prior to production. In fuller details we will expound this our position when we discuss the non-distinctness of the effect from the cause in Sūtra II. i. 14 below. 7.

Because during [the period of] re-absorption (or dissolution) there would result the contingency of its being like that : therefore, the theory is illogical. 8.

• Says the objector at this stage :—If the effect that has the characteristics of grossness, divisibility-into-parts, non-sentiency, finiteness, impurity and so forth, is to be assumed to have Brahman as its cause, then at the time of the Dissolution, when the effect would be restored to the causal state and re-absorbed (into the cause) and so [Page 13] would become undistinguishable from it, the effect would, by its own characteristics, contaminate the cause, so that during re-absorption there would arise the contingency of the cause Brahman also possessing, like the effect (world), impurity and other characteristics. Hence the Upanishadic view as to the omniscient Brahman being the cause of the world does not stand to reason.—Again, once all the distinctions have merged undistinguishably together (into Brahman), at the time of the succeeding creation there cannot necessarily result a new creation with a (similar) distinction between the experiencing souls and the objects of experience, as there is nothing to restrain (the two classes) from being mixed with each other. For this reason also the view is unreasonable.—Once again, after the experiencing-souls have become, during the Dissolution, non-distinguishable from Brahman, if we were to assume a newer creation, although the occasion for it, viz., the Karman (of the souls), no longer exists—being merged into Brahman—then there is

sure to result the contingency of the liberated souls also becoming liable to be born in that creation : which also is another defect of logic (in the Brahman theory).—Should this world, finally, be imagined, even during the state of Dissolution, to remain just distinct from the Highest Brahman, then there can be no Dissolution strictly so-called, to say nothing of the objection that the effect can in-no-wise remain distinct from the cause. Therefore also the theory is illogical. 8.

To this we reply—

Not so : because there do exist parallel instances. 9.

There is not at all in our theory anything of illogicality. As to the defect pointed out, viz., that the effect, being re-absorbed into the cause at Dissolution, would by its own characteristics contaminate the cause, that is no defect. Why ? Because there do exist parallel instances. Instances can indeed be pointed out in which an effect merging back into the cause does not by its own characteristics contaminate the cause. For example, earthen plates, etc., which are the products of clay, the constituent cause, although during the period of their separate existence (as plates etc.) they are divisible into classes such as very good (high), very bad (low), and middling, they do not yet contaminate with these their characteristics their constituent cause, the clay. Similarly different ornaments fashioned out of gold, when they, after their destruction, become re-absorbed into gold, do not by their own characteristics contaminate the gold. Likewise also, the four classes of beings which are produced out of the earth do not by their own characteristics contaminate the Earth when absorbed back into it. It is for your view of the case that no parallel instance can be cited. For, Dissolution itself would be impossible if the effect were to remain within the cause just by its own nature. It is to be noted here, however, that although there is non-distinctness in nature between the effect and the cause, it is the effect that is of the nature of the cause, and not the cause of the nature of the effect, as is clear from Scriptural statements about (word-)initiation (of creation) : and this he will state later under Sūtra II. i. 14.—Furthermore, your objection covers a far less field than there is warrant for, when you urge that the effect, at the time of re-absorption, would by its characteristics contaminate

the cause. The contingency holds equally well during the time that (the world actually) endures (as the world), as we (through-out) maintain non-separateness between the effect and the cause. For, there are Scriptural texts like [Br̥h., ii. 4. 6]—"All this that there is, is the Ātman," or [Chh., vii. 25. 2]—"The Ātman itself is all this," or [Muṇḍaka, II. ii. 11]—"Formerly all this was the immortal Brahman itself," or [Chh., iii. 14. 1.]—"All this verily is Brahman," [Page 14]—that declare the non-sepa-rateness in all the three times of the effect from the cause. The way out of the contingency that is available in these cases, viz., that the cause is not contaminated by the characteristics of the effect, because the effect itself as well as its characteristics are superimpositions of Nescience, that same also holds good in the condition of Dissolution.

There is also this other parallel instance : Just as a magician is not in all the three times affected by the magical-illusion which he himself spreads out, because (the illusion) is not a reality, even so is the Highest Self not affected by the world-illusion ; and again, just as the one (Soul) who is seeing a dream is not affected by the illusions of the dream-vision, because that illusion does not follow him over into either the waking or the deep-sleep conditions, even so the one enduring Soul who witnesses all the three conditions without himself undergoing any change, is in no way affected by all the three states that mutually exclude one another (none of them running over into the other). That the Highest Self should appear to have these three states is itself sheer illusion, comparable to the appearance of a rope in the form of a snake and the like. On this point there is a pronouncement by the Teachers who are the knowers of the traditional teaching of the Upanishads [Gaudapāda-Kārikās, i. 16]—"When the Soul, thrown into sleep by the beginningless Illusion, wakes up from it ; it is only then that he realises the non-duality wherein there is neither birth, nor sleep, nor dreaming." So then, the defect urged on the ground of the contingency that, during the state of re-absorption, the cause also, like the effect, would be affected by grossness and other qualities is no longer tenable. Next, the objection that, after the merging together of all distinctions whatsoever, there cannot be pointed out any principle to regulate the subsequent creation together

with its distinctive classifications : that is also nugatory, and just for the reason that parallel instances exist. For, just as, in the conditions of deep-sleep or Yogic-trance and the like, even though one might attain therein to one's innate nature of freedom-from-distinctions, still inasmuch as his Nescience stands unsublated, when he wakes out of it, there does exist for him the same old distinctive classifications : even so it could be in the present case. To this effect is the Scriptural statement [Chh., vi. 9. 2-3] —“All these creatures are absorbed into the (Brahman which is) Existence, and yet do not know that they are absorbed into It. Be they here a tiger, or a lion, or a wolf, or a hog, or a worm, or a butterfly, or a gnat, or a fly : whatsoever they are that they re-become.” Just as, although the Highest Self is beyond all distinctions, yet, during the subsistence of the world, we do observe uninterrupted, all these dealings based upon distinctions, like unto the (affairs of the) dream-world (while it endures),—the dealings being grounded upon a false knowledge—even so, during the state of re-absorption also, we would infer the existence of (a latent tendency for) making distinctions, grounded likewise upon (unsublated) false knowledge. — By the same argument can be set at rest the contingency as to the liberated souls being born again, seeing that, in their case, all false knowledge has been sublated by right knowledge.—Lastly, as to the other alternative-contingency raised towards the end, viz., ‘ should this world be imagined, even during the state of Dissolution, to remain just distinct from the Highest Brahman ’ that is refuted by us inasmuch as we do not at all make the assumption. Hence our Upanishadic doctrine is quite logical. 9.

And because your own view is open to the same objection. 10.

[Page 15] And in the view of our opponent also the same common deficiencies would become manifest. We explain how. As to the contention that by reason of the disparity-in-nature the world cannot have Brahman for its constituent cause, that is equally applicable if it were to have the (Sāṁkhya) Pradhāna for its constituent cause, since in this view also the world which has qualities such as sound etc. is assumed to proceed from the Pradhāna which has not those sound and the other qualities. And for that very reason, i. e., because of the assumption of the pro-

duction of a disparate effect (from the Pradhāna), there would result the same contingency of the acceptance of the doctrine of the non-existence of the effect prior to its origination. So also, in the state of Dissolution, if the effect were to be assumed to remain non-distinct from the cause, the contingency of " this becoming like that " holds equally true. So likewise when all the effects, with all their specific individualities sublated, have become, in the condition of Dissolution, non-distinguishable (from their cause, the Pradhāna), the distinctions such as—this is the material-constituent attached to this Self, this the one attached to this other : all these which, prior to the Dissolution, were restricted to each person, they cannot possibly be, in a subsequent creation, regularly and necessarily assigned (to the same persons), as there is no adequate ground for the restriction. And if we assume that such a restriction could be made even in the absence of adequate ground, then the liberated souls can be liable to bondage once more, because even in their case there is the same absence of adequate ground (which by hypothesis is no bar). And if you were to make the supposition that it is only *some* of the distinctions that would become non-distinguishable, i.e., that would be completely absorbed into the Pradhāna, and not the others, then those that do not become (so absorbed) will have to be considered as not the effects of the Pradhāna. Thus all these deficiencies are common to both the sides and should not be urged against only one of them ; and so (the sūtra) emphatically declares the deficiencies to be not deficiencies, inasmuch as they have to be necessarily admitted. 10.

And also because of the non-stability of reasoning. And should you claim to reason otherwise, even so there results the contingency of non-release. 11.

For this additional reason also one should not raise any objection on the basis of mere reasoning against a matter which can be known only from the Scriptures ; since, that is to say, all reasonings are void of traditional authority and so lacking in stability, being just spun out of the sheerest guesses of men—there being no goad to keep such guesses under check. For, we find that reasonings put forth by certain learned persons with great ado are perceived to be fallacious by others more learned than

these, while those put forth by these again are proved to contain a fallacy by some others still, so that it is not possible to assign any stability to reasonings, because there is such a difference in the faculties of men. And if one were to follow the lead of a supposedly stable process-of-reasoning endorsed by a person of well-established eminence like Kapila or some other person, even so there results the absence of stability, inasmuch as we observe the existence of a mutual divergence of views amongst propounders-of-systems like Kapila, Kanāda and the rest, although they be admitted to possess a well-established pre-eminence. And if you were to say—we would reason in some other manner so as to avoid the fault of an absence of stability. For, surely, it is not possible to hold that there does not at all exist any stable (unshakeable) reasoning. To go no further, this very non-stability of reasonings is (sought to be) established by reasoning itself, inasmuch as, having observed the non-stability of a certain number of reasonings, you imagine the non-stability of other reasonings of the same class. If all reasonings were to be unstable [Page 16] there would result the contingency of an annihilation of all worldly dealings. For, we do see in ordinary life people proceeding to acquire or avert (respectively) the pleasure or the pain in the path-way that is yet to be traversed on the analogy of the path-way that has been or is being traversed. Moreover, whenever there ensues a divergence of views as to the real intention of a Scriptural text, it is reasoning, consisting in an exposition of the purport of a sentence, which enables us to refute the false (prima facie) interpretation and fix the correct one. Manu also holds the same view when he lays down [xii. 105]—" Direct perception, and inference, and the Śāstra consisting of various Scriptural texts : these three one should master thoroughly well if he is desirous of ascertaining (the nature of) purity in religious-practice;" and again [xii. 106]—" It is he who tries to harmonise the injunction about religious-practices laid down by Sages with a reasoning not going against the teaching of the Vedas and the Śāstras: he alone knows what is true religious-practice and none other." In fact the so-called absence of stability is exactly a point of honour for reasoning; for, that serves as an incentive for throwing out defective reasoning and accepting one that is free from all defects. For, surely, because our forefathers were fools, that should constitute no ground at all

why we ourselves should act like fools. Therefore the instability of reasoning is no fault-in-argument. To this the reply is : Even so there arises the contingency of an absence of release. Although in a sporadic case or two reasoning appears to be well-grounded, still in the present instance, in any count, there does arise the non-release of reasoning from the fault of instability ; for, a knowledge of the actual Reality as it is, which is perfectly unfathomable and on which depends man's final emancipation, cannot be even distantly guessed except with the help of the Scriptures. For, as we have already said, this is an object not falling within the ken of direct-perception as there is an absence of colour and other qualities in it, and not within that of inference and other means-of-knowledge, owing to the absence of inferential marks etc. belonging to it. Further, all the disputants who believe in a final release do equally assume that the release is achieved by right knowledge ; and this right knowledge, because referring to an existing reality, must be uniform. We declare that to be the highest truth which always endures in one and the same form ; and the knowledge of this truth is known as the true knowledge in the world : e. g., the knowledge that fire is hot. This being so, it is absurd that persons should maintain a diversity of views regarding the nature of the true knowledge. Contrariwise, the divergence in views based upon reasoning—their mutual opposition (and inconsistency)—is admitted on all hands. For, what one logician puts forward, claiming that that alone is the true knowledge, that is upset by another ; and what this other one establishes, that is controverted by another still : this is already well-known all through the world. How can a knowledge arrived at by reasoning, and having no fixed and uniform content, ever become true knowledge ? Nor is it a fact that the propounder of the Pradhāna theory is acknowledged by all the logicians as being the most pre-eminent amongst those that know how to reason, so that it might have been possible to accept his view as being the one most true. And it is of course not possible to call together in one place and at one time all the logicians that have been, that are, and that will ever be born, so that the joint-view of them all, when referring to one and the same object and delivering itself in an identical manner, might be regarded as the true knowledge. The Veda, as contrasted with these, is eternal and is the source of the right knowledge, and it

[Page 17] can properly have a fixity of subject-matter and form-of-contents, so that it would be impossible for any logicians of the past, the present, and the future to gainsay the claim for correctness which the knowledge based upon Veda can rightfully have. Hence it follows that it is this very Upanishadic knowledge that is the true knowledge. And as the claim for being true cannot be established for any knowledge other than this, there would result (by following this other knowledge) a non-release from worldly-fetters. It thus stands established that, in conformity with the Scriptures and in conformity with reasonings consistent with the Scriptures, it is the sentient Brahman that is the efficient and the constituent cause of this world. 11. Here ends the Topic (3) called Disparity-in-Nature.

TOPIC 4: REPROBATE THEORIES

(*Sūtra* 12)

Hereby are also explained (away) theories, reprobated by men-of-position-and-competence. 12.

Because it offered the closest analogy unto the Upanishadic theory, because it was supported by very weighty reasonings, and because, in some of its sections, it was accepted by some competent followers of the Vedic view,—for these reasons it was that the objection against the Upanishadic teachings, put forth upon the basis of reasoning and claiming to find support from the theory that recognised the Pradhāna as the cause (of the world), has been thus far answered. Now, there continues to be brought forward, by some persons of feeble intellect and on the strength even of such theories as that of the Atoms, an objection based upon (mere) reasoning against the statements in the Upanishads. To meet that he makes an analogical-transference (of the present argumentation), following the (well-known) maxim of overthrowing the main assailant only (and ignoring the minor ones). What are accepted (*parigrihyante*) are called *parigrahāḥ*. Those that are not *parigrahāḥ* are styled *a-parigrahāḥ*. The *a-parigrahāḥ* of the men-of-competence-and-learning (*Śiṣṭāḥ*) are designated (in the text of the *sūtra*) as the “*Sish-ṭāparigrahāḥ*” or theories not accepted by the wise. By virtue

of the present argumentation in refutation of the theory that regards the Pradhāna as the cause, we have to consider as refuted, after a setting forth of their untenable nature, the theories such as those which recognise the atoms and the like as the cause (of the universe)—theories which in none of their portions have been at all countenanced by persons of authority like Manu, Vyāsa, and others. The refuting argument being identical, there remains now no further ground at all for raising any objection. For, there holds good even in their case the fact of the impenetrability by (mere) logic of the highly mysterious (cause of the universe), of the instability of reasoning, of the resulting absence of release if one were to reason in any other mode, and the contradiction with the Scriptures: these and the like are the grounds of refutation. 12. Here ends the Topic (4) styled Reprobate Theories.

TOPIC 5 : OBJECTS TURNED SUBJECTS

(*Sūtra* 13)

If it be urged that by reason of the objects (of experience) becoming one with the experiencing subjects there would result an absence of discrimination, we reply, it might happen as in ordinary life. 13.

Once again, from another view-point, but on the strength of reasoning itself, the theory that regards the Brahman as the cause is being objected to. Although we grant that Scriptures might be the sole authority in their own proper province, yet where their subject-matter falls within the range of another means-of-knowledge, it is but fair that it should conform to this other means. This holds good in the case of several ritualistic and laudatory texts. Reasoning, likewise, should be unauthoritative in matters not falling strictly within its field, e. g., in regard to what constitutes and what does not constitute correct religious-practice. Well, what are you driving at? This being conceded, it is not right that the Scripture should run counter [Page 18] to something already well-established by other means-of-knowledge. But what makes you say that anything already well-established by other means-of-knowledge is contradicted by the Scriptures? The

reply follows. This distinction between the objects of experience and the experiencing subject is well-established in the world : the subject being the sentient soul within the body and the objects, the qualities like sound and the rest. Thus Devadatta is the experiencing subject, and cooked-rice the object of experience. Now this distinction would be rendered nugatory, if the subject were to be transformed into the object, or the object transformed into the subject. And such a mutual transformation in their case would ensue by reason of their being believed to be one with Brahman, the Highest Cause. And it is not right that this well-established distinction be rendered nugatory by the Scripture. For, we must postulate the existence of a distinction between the experiencing-subject and the objects-of-experience in the past and in the future, similar to what there actually exists to-day in the present. Hence, because of the resulting contingency of an annihilation of this well-established distinction between the experiencing-subject and the objects-of-experience, the final conclusion, making Brahman the cause (of the universe), is not tenable. If some one were to start such an objection one should answer him thus : It might happen as in the ordinary life. Even in our view the distinction in question can obtain without difficulty, since we observe analogies to it in the world. To explain : although foam and wave and ripple and bubble and the rest, as being just the modifications of the ocean, are not distinct from the ocean, whose essence is water, there can yet obtain a distinctness amongst themselves as also mutual relation between them such as conjunction etc. with one another. In this instance although the foam, ripple, and the rest, as modifications of the ocean, are not distinct-in-essence from the ocean which is constituted of water, yet there does not result any confusion of the one with the other. And even while such a commingling of them into one another does not take place, yet it is not that they possess an essence distinct from that of the ocean. Just so in the present case also there need not ensue the mixing up of the one with the other in the case of the experiencing-subjects and the objects-of-experience ; nor likewise need they be regarded as having an essence distinct from the Highest Brahman. — It is to be noted here that although the experiencing-subject is not a modification of the Brahman, inasmuch as the Scriptural text [Tait. Up., ii. 6]—“Having created it, He thereupon entered into

the same"—speaks of the subsequent-entrance of the unmodified Creator himself into his creation, and his becoming himself the experiencing-subj-ect, yet once He has entered into his creation there does exist a distinction caused by specific-limitations, just as there is one in the Ether caused by limitations such as the Ether-within-a-jar and the like. Consequently, it has been stated that there can exist, on the analogy of the ocean and the ripples, the distinction between the experiencing-subject and the objects-of-experience, although they are both of them identical-in-essence with Brahman, the Highest Cause. 13. Here ends the Topic (5) entitled Objects Turned Subjects.

TOPIC 6 : WORD-INITIATED WORLD

(*Sūtras* 14-20)

'There is non-distinctness (of the world) from that (i. e., Brahman), because of the statements regarding (Word-)Initiation, and the like. 14.

Assuming this ordinary distinction in the shape of the experiencing-subject and the objects-of-experience we have formulated our refutation, saying that it might happen as in ordinary life. But this distinction does not exist from the point of view of the highest truth, inasmuch as we learn of the non-distinctness of the two : the effect and the cause. The effect is the multiform expanse of the world including the Ether and the rest ; [Page 19] the cause is the Highest Brahman ; and, from the point of view of the highest truth, we learn of the non-distinctness, i. e., non-existence as apart from it, of this effect from that cause. How ? Because of Scriptural statements such as (word-)initiation and the like. To begin with the statement concerning (word-)initiation, there, after promising the knowledge of *all* consequent upon the knowledge of *one*, by way of the needed illustrative example it is said [Chh., vi. 1. 4]—" Just as, My dear boy, by just one lump-of-clay everything fabricated out of clay can become comprehended, the modified-form being only a word-initiation,—a mere name,—as the clay alone it having any reality." The point intended is this : When one lump of clay is comprehended in its real nature as clay, all fabrications of clays such as jar, plate, or water-

pot, being in reality no more than the clay-in-essence, can become comprehended, inasmuch as the modified-forms are a fabrication of mere word, are a name only and are originated by word alone, as when it is said that here is a jar, a plate, a water-pot, and so on. The modified-form as such has not at all any reality of essence: it is a mere name only, an unreality; the reality belonging to it only as it is clay. The above is an illustration used for the Brahman in the Scriptural text. The statement about word-initiation occurring here leads us to consider, by an application of the illustration to the matter-in-hand, the entire mass of created-objects as having no existence apart from the Brahman. And later, after declaring that Light, Water, and Food are the effects of Brahman, the same text proceeds to assert that the effects (of this triad) of Light, Water, and Food have no real existence as apart from Light, Water, and Food, with the words beginning with [Chh., vi. 4. 1]—"Fireness has vanished from the fire (as an independent reality), the modified-form being only an initiation by words, a mere name, the true reality being just the three colours (red, white, and black—belonging respectively to Light, Water, and Food)."—The sūtra speaks of 'statements regarding (Word-)initiation and the like,' and by 'the like' are to be adduced texts declaratory of the oneness of the Ātman, like [Chh., vi. 8. 7]—"All this has 'that one' as its essence; 'that one' is reality; 'that one' is the Self: and "That thou art"; or [Brīh. ii., 4. 6]—"All this that there is, is this very Self"; or [Muṇḍaka, II. ii. 11]—"Brahman alone is all this"; or [Chh., vii. 25. 2]—"The Ātman alone is all this"; or [Brīh., iv. 4. 19]—"There is nothing at all of the manifold in the world." For, we cannot otherwise understand the possibility of the knowledge of one thing giving the knowledge of everything. Hence, just as the ether contained within a jar, within a water-pot, etc., is not distinct from the great mass of ether in its entirety, and just as the water in the mirage and the like is not distinct from the sandy-plane and so forth, seeing that the former have a form that anon appears and disappears, and so are not capable of being described in their real essence;—even so, we have to understand this entire mass of worldly-phenomenon consisting of experiencing-subjects and objects-of-experience, as having no real existence as apart from the Brahman.

An objection: Why not regard the Brahman as possessing

more than one nature in reality ? Just as a tree has more than one branch, even so is the Brahman endowed with more than one power and activity. Accordingly, both the oneness and the manifoldness are true in reality, just as the tree has [Page 20] oneness when considered as tree, but manifoldness when considered as branches ; or just as the ocean has oneness *qua* ocean, but manifoldness as foam, ripples, etc.; or just as, again, the clay as clay is one, but as jar, plate, etc., manifold. Out of this two-fold nature, the knowledge of that portion which refers to oneness would bring to pass the Scriptural declarations as to emancipation, etc., while by the portion referring to manifoldness would be accomplished the secular and the Scriptural requirements belonging to the Sphere of Works. And in this way also illustrations as to clay and the like would be harmonised.—To this we say—No. For, in the illustration [Chh., vi. 4. 1]—“As clay alone there is reality,” the constituent-cause is alone emphatically declared to be the exclusive reality, the statement about Word-initiation assigning unreality to the entire mass of modified-forms. The same should hold true also of the theme for which the illustrations were adduced. For, there is a definite declaration [Chh., vi. 8. 7]—“All this has ‘this one’ as its essence; and that is the Real”—to the effect that the Highest Cause is alone real ; while there is the teaching [ibid., vi. 8. 7]—“That is the Self : That thou art, O Śvetaketu”—that the Self-within-the-body is one with the Brahman. This oneness with Brahman of the Self-within-the-body is self-subsistent : it is not something the truth of which has to be established by extraneous efforts. So, when this oneness-in-essence with Brahman, declared in the Scriptures, comes to be realised, it serves to annihilate the ordinarily-understood distinct-individuality of the Self-within-the-body, just as the knowledge of the rope as rope drives away the (mistaken) knowledge of it as a snake and the like. And once the individuality of the Self-within-the-body is sublated, all the ordinary dealings based upon that become nugatory—dealings for establishing which one had to assume the existence of a second distinct aspect of the Brahman as manifold. This is borne out by passages such as [Brīh., iv. 5. 15]—“When, on the contrary, all this has become in his case just one with the Self, then what is there for him to see and what means to see it ?”—which declare the absence of all phenomenal-dealings based upon

actions, means to actions, and fruits of actions, in the case of one who has realised the Brahman as the essence (of everything). Nor can it stand to reason to assert that this (perception of the) absence of all the phenomenal-dealings is merely contingent upon certain specific conditions; for, the statement [Chh., vi. 8. 7]—"That thou art"—does not declare the (Self's) oneness-in-essence with Brahman as bound up with any specific conditions. Further, the illustration of the thief [Chh., vi. 16] declares the bondage for one who states the untruth, and the release in the case of one who states the truth; and so vouches for the sole ultimate reality of oneness only—the manifoldness being an apparition raised up by false knowledge. For, if both were to be true, how can a creature, immersed in phenomenal-world as he is, be spoken of as a prevaricator? And the text [Brh., iv. 4. 19]—"From Death he comes by death, who sees manifoldness here"—declares as much by its deprecation of a belief in manifoldness. Nor can this view [Page 21] cogently explain how emancipation can be the result of knowledge; for, there is no scope (in this view) for any kind of false knowledge which gives rise to worldly-bondage and which is to be driven away by true knowledge. For, when both of them are true, how can it be said that the knowledge of oneness drives away the knowledge of manifoldness?

But an objector might say, if we assume absolute oneness, there being no manifoldness, the ordinary means-of-knowledge such as direct-perception would be rendered nugatory as having no scope for them, like perceptions as to the form of a human being when applied to objects like pillars (which are not human beings). So also the Scriptural prescriptions as to what should and what should not be done—depending as they do upon distinctions, would also be null and void in the absence of that (manifoldness). Likewise, too, the Scriptural teaching as to emancipation would, in the absence of that, come to nought, since it is contingent upon distinctions like that between the teacher and the taught. Besides, how can we reasonably believe in the truth of the doctrine of the oneness of the Self propounded by the Scriptural teaching about emancipation, when the Scripture itself is to be false?—To the above objection we reply that our theory is not open to the fault urged. For, prior to the realisation of the

Brahman as the only true Reality, all ordinary views-and-practices whatsoever can well be true, like the phenomena of the dream-life prior to awakening. As long as there has not taken place the realisation of the oneness of Self as the only Reality, so long nobody has, born within him, the notion as to the unreality of all the modified-forms that fall into the (three) categories of the means-of-knowledge, objects-of-knowledge, and fruit-of-knowledge. On the other hand, all creatures, under the influence of Nescience, and throwing overboard the oneness-in-essence with the Brahman which is theirs by right, conceive a notion with reference to the (various) phenomenal-forms, regarding them as of their own essence or as belonging to them, and designating them (respectively) as the 'I' or the 'mine'. Therefore, prior to the awakening of the consciousness of the Brahman as the only true Reality, all secular and Scriptural requirements can find a satisfactory warrant. Just as for the ordinary man, gone asleep and visualising in dreams objects high and low, there does exist, prior to the awakening, a knowledge which he thinks to be direct perception, and which he (for the time) even firmly believes in—there being, be it noted, no notion at the time of the fallaciousness of that 'direct-perception'—even so in the present case. — But, it might be asked, how can we possibly explain the knowledge—which is true—of the Brahman as the only Reality, when it is to result from an Upanishadic statement which falls within the sphere of the untrue? For, surely, one bitten by a rope-mistaken-as-snake never dies; nor is it possible, with the help of the water-in-the-mirage, to achieve purposes like drinking, bathing, and the like. But that is no objection; for, we do meet with effects, such as death, resulting from even suspicion of poison and the like; and in a man during the state of dream we do see the effects (quivering etc.) of snake-bite, bath, and the like. Should it be urged that even this effect is unreal, this is our reply: Although in a man during the state of dream the effects due to snake-bite, bath, and the like be false, yet there is the fruit of them in the form of the man's consciousness of what had happened, which is true, seeing that it does not disappear even in the wakeful condition. For, assuredly, no man whatsoever, when awakened from dreaming, although realising as false the effects due to snake-bite, water-baths, and the like which he saw in the dream, ever regards his experience of them

as untrue.—Incidentally, from the fact of the persistence of this consciousness of dream-experience in the man who has seen dreams we have to understand a refutation of the theory which regards the body itself as the Self.—We have a Scriptural passage to the same effect [Chh., v. 2. 9].—"When, while some activity intended for a definite end is proceeding, one sees a woman in his dreams, in that dream-vision of his he should understand a prosperity for him"—[Page 22] which avows for the acquisition of a prosperity which is real from a dream-vision which is unreal. In the same manner Ait. Āraṇ. [III. ii. 4. 7]—after declaring that, when certain omens capable of being experienced during waking-life have presented themselves, "one should consider that he will not live much longer," goes on to say (ibid., III. ii. 4. 15)—"Now the dreams: One sees (in the dream) a black person with black teeth; and that person kills him"—that even these varied dream-visions which are unreal presage death which is real. And that is indeed well-established, in ordinary life, with persons who are skilled in (drawing inference from) invariable concomitance and non-concomitance, viz., that such-and-such a dream-vision conduces to weal and such-and-such an one to woe. So too we observe the knowledge of the true 'A' and other (sounds) as resulting from the knowledge of the untrue symbolic lines (standing for them).—Finally, here is this ultimate (decisive) argument to prove the oneness of the Ātman: viz., there is nothing further beyond it of which an expectancy exists. While in an ordinary statement such as, 'one should make an offering,' there arises the expectancy as to 'unto whom,' 'with what,' and 'in what mode,' no such expectancy is known to arise in connection with the declaration [Chh., vi. 8. 7]—"That thou art," or [Bṛih., i. 4. 10]—"I am Brahman," inasmuch as it intends to convey the knowledge of the absolute oneness of the true essence of everything. It is only when some other object exists as a remainder that there might arise the expectancy; but there does not exist any other object remaining apart from and beyond the Ātman, which can give rise to the expectancy. Nor is it possible to urge that such a knowledge never does arise; for, there are Vedic texts like [Chh., vi. 16. 3]—"And then indeed he did realise," and there are also prescriptions for securing that knowledge such as hearing (the Vedic texts, Bṛih., iv. 6) and repeating them after the teacher [Bṛih., iv. 4. 22]. And it is not possible to urge

that this knowledge is fruitless or erroneous ; for, we see the fruit of it, viz., the cessation of Nescience ; and there arises thereafter no other knowledge to negative the (earlier) knowledge (as happens in the case of an erroneous knowledge). Of course, until this absolute oneness of the Ātman is realised, all secular and Scriptural affairs which are due to a compound of truth with falsehood, remain, as we have already stated, quite undisturbed. Hence, when the absolute oneness of the Ātman is brought home by this ultimate (decisive) means-of-knowledge, all the earlier activities based upon distinction are annihilated, and there then remains no more any scope for imagining the Brahman to possess manifoldness.

Another objection : we gather, from the assigning of illustrative examples such as the lump-of-clay, that the Scriptural texts intend to set forth the Brahman as one capable of being modified : for, objects like the lump-of-clay are known in ordinary life to be capable of assuming modifications. We answer, No. For, texts like [Bṛih., iv. 4. 25]—" He, indeed, is this great unborn Ātman, the ageless, deathless, immortal and fearless Brahman"; [Page 23] or [Bṛih., iii. 9. 26]—" He is that Ātman, the Not-this, Not-that"; or [Bṛih., iii. 8. 8]—" It is neither gross nor subtle",—and others deny unto the Brahman every kind of modification and declare it to be immutable. And it surely is not possible to understand one and the same Brahman as both capable and also incapable of assuming modifications. Why may it not be possible, like standing and moving (in the case of one and the same man)? No : because we have declared the Brahman to be immutable. Unto the immutable Brahman, of course, there cannot be assigned manifoldness of nature like standing and moving. We have already said that the Brahman is immutable and eternal inasmuch as all kinds of modifications are denied of it. Nor can we imagine that, just as the realisation of the oneness of the Ātman with the Brahman is the means to salvation, even so the realisation of it as capable of assuming the modifications in the form of the world might have been intended as another independent means for some other assignable fruit ; for there is no valid proof for the supposition. The Scripture declares the fruit to follow just from the realisation of the Ātman as being one with the immutable Brahman ; for instance, the text [Bṛih., iv. 2. 4] which

begins with—"He is that Ātman, the Not-this, Not-that," and concludes [Brīh., iv. 2. 4]—"Now indeed, O Janaka, thou hast attained the Fearless One." From this it follows that in a context where the prevailing theme is the Brahman, when it has been proved that the winning of the fruit is to result just from the realisation of the Brahman as destitute of all specific attributes whatsoever, any statements therein that are met with and that have no special fruit declared in their connection—e.g., the statement as to Brahman being modified in the form of the world—are to be understood merely as subordinate means contributory to the Brahma-realisation, in accordance with the maxim—"In a context where some fruit is declared in connection with the main-theme, any statements made without specification of a special fruit connected therewith have to be regarded as subordinate (to the main-theme)"—and not as though they are capable of yielding an independent fruit of their own. For, it is absurd to declare that from a realisation of the Brahman as susceptible of modifications there might result the fruit, viz., the Ātman's susceptibility to modifications, since the nature of emancipation has to be eternal and immutable (which it cannot be if the Ātman who is to get the emancipation were to be by nature mutable). — But, for one who holds by the theory of the oneness of the Ātman with the immutable Brahman, because for him there is absolute oneness, there would result the non-existence of a controller of the world and the objects-controlled, and so a contradiction with his own solemn-declaration as to the Lord being the cause (of the Universe). To this we say, No: For the (Lord's) omniscience turns upon the mere unfolding of the embryonic Names and Forms which go to make up the Nescience. It was on the basis of texts like [Tait. Up., i. 1]—"From that Ātman sprang forth the Ether"—that we had made the solemn-assertion [Brah. Sūtra, I. i. 2]—"From which (arise) the origination etc. of this (universe)"—intended to declare that it is from the omniscient, omnipotent Lord, whose nature is eternal, pure, unfettered, consciousness, that there result the world's origination, subsistence, and dissolution, and not from the non-sentient Pradhāna or from some other principle. That solemn-assertion of course stands: nor do we assert here anything which runs counter to it. How can you say that, when you declare in the same breath the absolute oneness of the Ātman without anything as

a second to it? Listen how we declare, nothing self-contradictory : In the Scriptural texts, and in the Smṛitis (based upon them), we are told that the omniscient Lord has—as if forming a part of his nature but not really explicable either as having that nature or as not having that nature—the Name and the Form, the fabrications of Nescience and the germinal-principles of the phenomenal-world,—which are designated [Page 24] as the Illusion or as the Power or as the Nature of the omniscient Lord. The omniscient Lord is distinct from these two, as is clear from the passage [Chh., viii. 14. 1]—“It is indeed the Ether which achieves the Name and the Form : that which is beyond these two is the Brahman,” as also from texts like [Chh., vi. 3. 2]—“Let me unfold the Name and the Form”; or [Tait. Āraṇ., iii. 12. 7]—“The Wise One, having congregated all forms, assigns the names and keeps on calling out the same;” or [Śvet., vi. 16]—“He who makes the one seed manifold.” Thus the Lord becomes the Lord only when conforming himself to the limitations of Name and Form made out by Nescience, like unto the ether as conforming to the limitations of the jar, the water-pot, and the like. And He it is who, from the point of view of ordinary life, rules over the sentient-selves styled the individual-souls, who are as if a portion of Himself—analogueous to the ether as limited by the jar—and who conform to the bodies (kārya) and the organs which are all the creations of Name and Form,—all of them the fabrications of Nescience. Thus, then, the Lord’s character as Lord—His omniscience and omnipotence—is merely contingent upon His being characterised by these limitations that consist of Nescience; while from the point of view of the ultimate truth there cannot reasonably remain any scope herein for the ordinary conceptions of controlling, being controlled, omniscience and the like, when the Ātman has once attained through knowledge his real nature in which all limitations are at an end. This has been declared by texts like [Chh., vii. 24. 1]—“Wherein he neither sees anything beyond it, nor hears anything besides it, nor knows anything other than itself : that is the Plenum;” and [Br̥h., iv. 5. 15]—“When in his case everything has become his very Self, what can he perceive, and with what can he perceive?” Thus in the state of highest Reality all the Upanishads vouch for the annihilation of all phenomenal-dealings. To the like effect also the Bhagavadgītā [v. 14-15]—“The Lord

creates, of these people, neither their function-as-an-actor, nor their activities, nor the joining of their actions with (corresponding) fruit : it is Nature that does it all (automatically). Nor does the Lord receive either the sin or the merit of anyone : the knowledge is obscured by Nescience, and as a consequence of it the creatures all go deviously "—wherein is set forth, the utter absence, in the state of highest Reality, of ordinary conceptions such as that of the controller and the objects-controlled, and so forth. From the point of view of ordinary perception, on the other hand, there are statements even in the Scriptures referring to the Lord, the Controller, etc. Thus [Brīh., iv. 4. 22] —“ He is the Lord of all, the Over-lord of all beings, the Guardian of the creatures, the embankment that steadies all these worlds so as to prevent their falling into utter confusion :” [Page 25] and likewise too the Bhagavadgītā [xviii. 61]—“ The Lord is stationed, O Arjuna, in the heart-region of all creatures, causing by His Power-of-Illusion all the beings to turn round and round, as though mounted upon a wheel. ” The author of these Sūtras on his part declares the ‘ non-distinctness from It ’ from the point of view of highest Reality ; while from the ordinary, phenomenal view-point he declares that ‘ it might happen as in the ordinary life, ’ making the Brahman equivalent to the great ocean (of the illustration), and so following the mode-of-explanation by the modification-theory—without as much as explicitly controverting the phenomenal creation—particularly as it might be of some utility in meditations on the Qualified (Brahman). 14.

And because there is a perception (of the effect) only upon the existence (of the cause). 15.

For this reason also there is non-distinctness of the effect from the cause ; because, namely, it is only consequent upon the existence of the cause that the effect is perceived, and not upon its non-existence. For example, it is only when the clay is there that a jar is observed or when the threads are there, that the cloth is observed. Such an invariable perception of one thing is never observed as being necessarily contingent upon the existence of quite another thing. A horse, for instance, being distinct from a cow, is not invariably found only where a cow exists ; nor, to

take another instance, is a jar invariably found only where the pot-maker exists, since they are two distinct things although between them exists the relation of an effect and its efficient (but not the constituent) cause. But, one might object, we do observe the invariable presence of one thing consequent upon the existence of another (and a distinct) thing, as for instance, the perception of the smoke (only) upon the existence of the fire. No, we reply. For, even though the fire be extinguished, we do observe smoke, as contained in a cow-boy's pipe, for example. Our objector might possibly characterise the smoke as being in a particular condition (for instance, continuous and copious and uprising) urging that this kind of smoke does not exist where the fire is non-existent; but even so there is nothing defective in our argument. For, we are going to say that the ground of the non-distinctness between the effect and its cause is the fact that our idea of the former is (invariably) coloured (and interpenetrated) by the form of the latter. Such a relation does not exist between the fire and the smoke.

As another alternative we might read the Sūtra as—"And because of the existence of the direct-perception (of the non-distinctness of the cause and the effect)." It is not merely on the basis of the Scriptures that there is non-distinctness between the effect and the cause: there is such non-distinctness also on the strength of a direct perception of it. For there does exist a direct perception as regards the non-distinctness between the effect and the cause. Thus, in an aggregate of the threads which make up the cloth, as apart from and beyond the threads, there is not at all observed such (a new and distinct) thing as a piece-of-cloth, the effect: what we do actually observe are mere threads extended lengthwise and breadthwise; and likewise (there are merely) the fibres in the threads (constituted out of them) and the smaller segments in the fibres. From such a direct perceptive cognition we can take back the chain of inference to the three colours: red, white, and black [out of which, according to Chh. vi. 4, everything is made], and then (as their still more ultimate basis) the mere wind and the mere ether; and, finally, the Brahman as the sole Absolute without a second—where, as we have said, all means-of-knowledge reach their most ultimate stay-and-support. 15.

And because of the (antecedent) existence of the subsequent (effect in the form of the cause). 16.

For this reason also, there is non-distinctness of the effect from the cause: because, prior to its origination, the Veda declares the existence of the effect, which belongs to a subsequent time, in the cause, and in the form of the cause. [Page 26] Thus [Chh., vi. 2. 1]—" All this, My boy, was undoubtedly existing in the beginning;" or [Ait. Ār., II. iv. 1. 1]—" The Ātman verily was alone all this in the beginning"—wherein there is declared a co-ordination between the effect referred to by the word 'this' and the Cause. If a thing does not exist within another, and as being of one essence with the other, it does not arise out of that; e.g., oil from sand-grains. Consequently, since, prior to origination, it was non-distinct, so the effect, even subsequent to production, has to be inferred to be non-distinct from the cause. Moreover, inasmuch as Brahman, the Cause, does not at all deviate from existence in all the three times, so likewise the effect, the world, does not also deviate from existence in all the three times; and since existence as such is one only, therefore also there is non-distinctness of the effect from the cause. 16.

If you say 'Nay' by reason of the designation (of the Cause) as 'non-existence', the reply is—No: because, as appears from the remainder of the statement, it is (a designation) by opposite specification (merely). 17.

One might urge: But in places the Scriptural texts do also designate the effect as non-existence prior to the origination: Thus [Chh., iii. 19. 1]—" All this was in the beginning just non-existence," or [Tait. Up., ii. 7. 1]—" Non-existence, indeed, was all this at first." From this designation of the effect as non-existence there cannot be said to be an existence of the effect prior to origination. To this we answer, No. For, this designation of the effect as non-existence is not intended to declare the utter non-existence of it prior to origination, but, as contrasted with the specification of the effect as in an evolved state of its names and forms, there is another specification of it as in an unevolved state of its names and forms; and it is by this other specification that there is here a designation of the effect—existing as it certainly

is prior to its origination, and non-distinct as it also is from the form of its cause. How do you know this? From the remainder of the statement. A statement which is of doubtful import in the earlier part is determined in meaning by its latter part. Here, for instance, in the text [Chh., iii. 19. 1]—" All this was in the beginning just non-existence"—the very same (effect) which at the outset is referred to by the word 'non-existence,' that same is again pointed to by the word 'that' and is specified as 'existence' in [Chh., iii. 19. 1]—"That was existence." [If 'that' had stood for mere non-existence,] as non-existence can have no relation with the prior or the posterior time, the word 'was' should not properly have been used of it. So also in [Tait. Up., ii. 7. 1]—"Non-existence indeed was all this at first," in the part of the statement to follow we have a specific mention to the effect [ibid., ii. 7. 1]—"That of itself transformed its own self," [Page 27] which means that it was not before absolutely non-existent. We conclude therefore that this designation of the effect prior to its origination is merely of the nature of an opposite specification. In ordinary life anything with a fully-evolved name and form is known as a fit object for being called existence; hence, prior to its evolution with names and forms, it can be taken in a secondary sense, and declared to be as though 'non-existence.' 17.

And from reasoning, as well as another Scriptural passage. 18.

From reasoning also we can infer the existence of the effect prior to its origination and its non-distinctness from the cause; as also from another Scriptural-passage. We will first describe the reasoning. We observe in ordinary life milk, clay, gold, and so forth—and none but these—resorted to by people who are desirous of (producing respectively) curds, jars, ornaments, etc. Persons wanting curds do not resort to clay, nor those wanting jars, to milk. This cannot be reasonably explained if the effect were taken to be non-existent. For (should it be so), prior to the origination, everything being everywhere alike non-existent, why should curds be produced out of milk alone and not out of clay, and why should a jar be produced out of clay alone and not out of milk? If (to obviate the objection) it be supposed that, although (the effect be everywhere) equally non-existing prior to its ori-

6 [Brahmasūtrabhāṣya, Trans.]

gination, yet it is in milk alone that there exists a certain subtle (predisposing) form of the curds, and not in clay; and in clay alone that there exists a certain subtle (predisposing) form of the jar, and not in milk: then, inasmuch as the antecedent condition is characterised by this subtle (predisposing) form, there results a throwing overboard of the theory of the (antecedent) non-existence of the effect (in the cause), and the establishing of the theory of the (antecedent) existence of the effect (in the cause). If, as another alternative, one were to posit in the cause a certain potency for invariably producing certain specific effect only, this potency cannot serve as a determining principle of the effect if it were to be either distinct (from effect) or altogether of the nature of non-existence; for, its non-existence or distinctness would not be specifically restricted to (particular effects and not others). Hence, the potency has to be of one essence with the cause, and the effect has to be of one essence with the potency. — Moreover, it is necessary that between the cause and the effect, as between the substance and its qualities, we should assume an identity of-essence, as there is no distinctness between them such as there is between a horse and a buffalo. And even with the hypothesis of the Intimate-Relation (*samavāya*) if there has to be assumed a relation (of some sort) between the Intimate-Relation itself on the one hand, and the intimately-related objects on the other, between this (new-relation) again and the things which it keeps in relation, a yet newer relation of some kind has to be assumed, and so on *ad infinitum*, which would lead to the contingency of non-finality. If, on the other hand, there is no assumption of such a relation, there would be the contingency of the breaking asunder (of the relation). Should you here urge that the Intimate Relation, being itself of the nature of a relation, would be related to the objects without the necessity of any intervening relation then (the quality called) Contact, being no less of the nature of a relation, ought to be related (with the objects in contact) without requiring an (intervening) Intimate Relation (as you assume). The assumption of an Intimate Relation is also purposeless because (pairs) such as the substance and its qualities are actually perceived as being identical-in-essence.—How, moreover, would the effect which is an aggregate of parts subsist—if it is to do so—upon its cause, viz., its constituent parts? Would it subsist upon (i) all the parts taken toge-

ther, or would it subsist upon (ii) each one of them singly (and by turn)? If it were to sub-sist (i, a) upon all the parts (collectively), then there would arise the contingency of the non-perception of the whole-as-such, because there cannot possibly be (in one act of perception) a perceptive-contact between the entire whole and the sense-of-perception. Thus, for illustration, (the quality of) plurality, residing as it does upon the total number of things that go to make it up, cannot be perceived by perceiving the constituent things singly. If it were to sub-sist (i, b) upon all the parts, but *serialim* [one segment of the whole coming into contact with its corresponding constituent-part], then [although the difficulty of non-perception disappears, yet] there will have to be imagined to the whole (a series of) constituent parts other than those out of which it was actually produced so as to make it possible for the former series of parts to exist upon the latter series in succession. For, it is by a series of constituent-parts distinct from those of scabbard that the sword fits into its scabbard. Such a supposition would further lead to a *regressus in infinitum*, because there will have to be imagined each time, [Page 28] a new series of constituent-parts to the whole by means of which it could reside upon the series of its constituent parts first imagined (and thereafter a second new series, and so on). On the other hand (case ii), if it were to reside (wholly and completely) upon any single one of its constituents, then while the whole is performing its function in one part, it cannot perform its function in another part. For, if Devadatta be present in Srughna, he cannot on that very day be present at Pāṭaliputra also. If there be a presence simultaneously in more than one place, there will have to be more than one personality: as for instance, of Devadatta and Yājñadatta respectively residents of Srughna and Pāṭaliputra. Were you to urge that, like the genus "cow-ness" (which, although one, resides upon each single species, the cow, wholly and completely) the constituted-whole might reside wholly and completely upon each one of its constituent parts, and so no defect obtains in our view, we reply, no; because we never have that sort of perception. For, were the constituted-whole to reside like cow-ness wholly and completely on each constituent-part then, just as we perceive the "cow-ness" in each cow by direct-perception, so ought we to be able to see the whole in each part by direct-per-

ception; but such a perception never takes place as by necessity. Moreover, if the whole were to reside upon any single part fully and completely, then inasmuch as a thing gets its status by performing its function, and inasmuch as the whole (which, is to perform the function) is only one, even by the horn (which by hypothesis is equal to the whole animal) it ought to perform, say, the function of the udder, or by the chest, the function of the back. But we never notice anything of the kind.

Further, if the effect were to be non-existent before its origination, then the (process of) origination would have neither a (grammatical) subject nor any substantiality. For, origination is certainly an action, and as such necessarily requires, like the action of going and so forth, a (grammatical) subject. That we should have an action and that it should be without a (grammatical) subject is a contradiction. When we speak of a jar originating, if the origination is not to have the jar as its (grammatical) subject, we will have in that case to imagine some other (grammatical) subject for it, (say, the potsherds). And similarly when we speak of potsherds etc. originating, we will have to imagine something-else as being the (grammatical) subject of that action. If that were true, when 'one says 'the jar originates' he will have to be taken to say that it is the 'pot-maker and other causes that are originating. In ordinary life, however, when there is a statement made about the origination of a jar one never understands that even the pot-maker and so forth are being originated: rather, these are understood to have been already originated. — If, further, one were to argue that the origination of, and the acquiring-of-a-concrete-individuality by, an effect is simply the effect's coming into [samavāya] relation with its cause, and with the (genus,) existence (respectively). you have to explain how one that has not yet obtained a substantiality can have any relation at all. A relation is possible only between two existing entities, and not between an existing and a non-existing entity, or between two non-existing entities.—Moreover, (when you speak of the non-existence of an effect prior to its origination,) since 'non-existence' is void of all characterisations, its delimitation as 'prior to origination' is inadmissible. In ordinary life it is existing entities like houses and fields that are seen to possess such delimitations, and not a non-existence.

For, surely, an attempt at delimitation like—"The barren-woman's son was the king before the coronation of Pūrṇavarman"—cannot convey any specification as to when the barren-woman's son, who is void of all reality, became or is or will become king. If ever, forsooth, the barren-woman's son were to come into existence subsequent to the operation of the causal agencies, then only would it stand to reason that the non-existing effect might step into existence subsequent to the operation of the causal agencies. We, however, hold the view that since the barren-woman's son and the non-existing effect are both of them equally non-existing entities, therefore, just as the barren-woman's son could not step into existence subsequent to the operation of the causal agencies, even so would the non-existing effect not come into existence subsequent to the operation of the causal agencies. It might be objected: if that were so, the operation of the causal agencies would be reduced to purposelessness. For, just as nobody ever busies himself (when producing a jar) to induce (the clay, pot-maker and other) causes to (assume an existential form) because these are already existing entities, even so, [Page 29] if the effect were to exist prior to origination, and were to be of one essence with its cause, then nobody would exert himself to endow the effect with the form-of-existence. But people do thus exert themselves. Hence, with a view to make the operation of causal agencies purposive, we would be inclined to regard the effect as non-existing prior to its origination.—The objection is not valid, we reply, since the operation of causal agencies will have motive enough in that thereby the cause is to be made to assume the form of an effect. That this 'form of the effect' again is also of one essence with the cause, inasmuch as what does not already exist in the cause as of one essence with it, cannot, as we have said, be originated. Besides, owing to a mere difference in the (external) form being observed, there cannot be assumed to be an otherness in the thing's real essence. For, surely, Devadatta (seated) with his hands and legs drawn together does not pass over into another entity in essence when one observes him in (another) position with his hands and legs stretched out; for, there is the recognition of his being the very same individual. In a like manner our parents etc., even though we observe them day after day in different varying postures, do not become different in essence, inasmuch as there is the recognition

that he is my father, brother, son, etc. (as the case may be). And if one were to object that this may be right in those cases where the ultimate limit of a difference in birth has not been crossed (and the individuals do not utterly disappear from us), but not so in the other cases : we say, Nay. For even in (the ordinary case of a cause-effect relation, viz.) milk and so forth assuming the form of curds, we see the transformation taking place before our very eyes. And even where, as in the case of the seeds of a Banian tree and the like (where the transformation into sprouts etc. takes place while they are) concealed from our sight, when the seeds spring up into our view after the accretion to them of other parts similar to their own, and so assuming the form of a sprout and the like, then we are to call it their birth ; and when these same parts waste away and we (ultimately) cease to see them, then we are to call it their death,—if it is the intervention of a birth and a death thus understood that is to make what was non-existence to become existence and what was existence to become non-existence, then we will have to recognise the child in the foetus and that lying on its back (after birth) as two distinct ones. Similarly too we will have to assume a distinction (of individuality) even in the conditions of childhood, youth and old age which would entail the contingency of giving the go to the ordinary dealings with the parents and the like.—Hereby the (Buddhist) doctrine of Momentariness is also to be understood as refuted. —He, on the other hand, who considers the effect as non-existent prior to its origination : in his theory the operation of causal agencies will have no material on which to operate : for, as the non-existent (effect) cannot be the material, it would be like the employment of various weapons such as sword etc., for the purpose of hacking the ether to pieces. If you contend that the operation of causal agencies can have (the clay) the inherent cause as the material to work upon, we say, No: for, it would involve an unwarranted license in logic if the causal agencies operating upon one thing (the inherent cause) were to bring into existence another (and quite a distinct) thing. And if it be held that the effect is merely a subtle-form of the inner-essence of the inherent cause, we demur, because that would bring you round to the doctrine of the (antecedent) existence of the effect (in the cause). Hence it follows that it is the very (causal) substances, milk and so forth, that come to be designated as effects when they stand

forth under the form of (the effects like) curds and the like. Consequently even after a hundred years one will not be able to reach the conclusion that the effect is distinct from the cause. Accordingly, it is (Brahman), the First Cause that, right down to its most ultimate effects, assumes, like an actor, the forms of the various effects, and so comes to be the basis of all the phenomenal dealings. Thus from reasoning we arrive at the doctrine of the existence of the effect prior to its origination, and its non-distinctness from the cause.

We arrive at the very same conclusion even from another Scriptural-text. Since in the preceding Sūtra there was cited a Scriptural-text which designated the cause as 'non-existence,' it is a text different from that which is meant by 'another' Scriptural-text, and which designates it as 'existence,'—namely one like [Chh., vi. 2. 1] : "Existence alone, My dear boy, was all this in the beginning, one and without-a-second." [Page 30] And the passage [in Chh., vi. 2. 1]—"And now some declare that it was nothing but 'non-existence' in the beginning"—introduces the view as regards (the effect being) 'non-existence,' and, calling this view into question by the words (following)—"How could existence be produced out of non-existence?"—reaches the final conclusion that—"Nothing but existence, My dear boy, was all this in the beginning." Here, inasmuch as, in the condition prior to origination, the effect which is denoted by the word 'this' is placed by the Scriptural-text in co-ordination with the cause which is denoted by the word 'existence,' there follow the (two) conclusions as to the (antecedent) existence (of the effect) and its non-distinctness (from the cause). If the effect were non-existent prior to origination and were to come into the relation of 'sama-vāya' while it is being subsequently produced, then it would be distinct from the cause. Under this supposition the solemn-declaration [Chh. vi. 1. 3]—"By which what has not been heard becomes something already heard...."—would be rendered nugatory. The solemn-declaration on the other hand is ratified (only) by believing in the (antecedent) existence (of the effect) and (its) non-distinctness (from the cause). 18.

And like unto a piece-of-cloth. 19.

And just as a piece-of-cloth, when rolled up, is not clearly

perceived as to whether it be a piece-of-cloth or some other substance: but the same when spread out is, by that spreading out, clearly perceived (as when one says—) the object that was rolled up is the piece-of-cloth itself. And just as, while it was rolled up, one did have the perception of it as a piece-of-cloth, but did not know it as possessing a specific length and breadth; and just as the same piece-of-cloth, while it is being spread out, is perceived as possessing a specific length and breadth, but it is not felt that it is a piece-of-cloth distinct from the one having the rolled-up form: in exactly the same manner an effect such as a piece-of-cloth is non-manifest while it subsists in the form of its causes like the threads, etc., and is rendered manifest for perception by the operation of the causal agencies like the shuttle, the loom, and the weaver. Thus the Sūtra means that the maxim of the rolled-up and the spread-out piece-of-cloth establishes the non-distinctness of the effect from the cause. 19.

And like unto the life-breaths etc. 20.

And just as we observe in the world the different life-breaths, such as the Prāṇa, Apāna, etc., abiding just in the form of their root-cause, when they are curbed in the (Yogic) process of breath-control, and so performing only the function of continuing the life, but not the other (wonted) functions such as withdrawing, expanding, and so forth; and just as, these same varieties of life-breath, when again released, perform likewise their other (wonted) functions—withdrawing, expanding, etc.—over and above that of the continuance of the life; and just as the different varieties of life-breath are not distinct from the Breath (or Prāṇa) which has these sub-varieties, seeing that all alike have the moving-air as their essence: even so, analogously, is the effect non-distinct from the cause. [Page 31] Hence, inasmuch as the entire world is an effect of Brahman and non-distinct from it, the solemn Vedic declaration, namely [Chh., vi. 1. 3]—"By which what has not been heard becomes something already heard, what has not been thought becomes something already thought, what has not been known becomes something already known....."—is fully ratified. 20. Here ends the Topic (6) styled Word-Initiated World.

TOPIC 7 : CREATOR HIGHER THAN THE SOUL

(*Sūtras* 21-23)

In consequence of the designation of the other One as this, there arises the contingency of his not-doing what is beneficial, and so forth, 21.

It is from another aspect of it that the doctrine of a sentient first cause is now being attacked. If indeed one were to postulate a sentient being to initiate the creative process, there would arise the contingency of defects such as not doing what is beneficial, and the like. Why? Because of the designation of the other One as this. For, the Scripture designates the other One, viz., the embodied soul, as being of the essence of Brahman, since there is an awakening of the consciousness in the following form [Chh., vi. 8. 7]—"That is the Self : That thou art, O Śvetaketu !" Or (interpreting another way) the Scripture designates the other One, viz., the Brahman as being the true Self of the embodied-soul, inasmuch as in the passage [Tait. Up., ii. 6]—"Having created it, into the very same He entered"—it is the Creator Brahman in the unmodified-form that is set forth as having subsequently entered all the effects, and so become the true Self of the embodied-soul. And in the text [Chh., vi. 3. 2]—"Let me thereafter enter (the creation) with this soul—this Self—and unfold the names and the forms"—the Highest Divinity designates the soul as the Self and hence points out that the embodied soul is not other than the Brahman. Therefore, the creative-function appertaining to Brahman is (eventually) that of the embodied-soul itself. As a consequence, being as he is, a free, independent creator, he should do just what is exclusively beneficial to him and what would cause him comfort, and not what is harmful to him, such as this net-work of manifold miseries, to wit : birth, death, oldage, disease and what not. For, no one who retains his freedom would fashion a house of incarceration for himself and therein enter. Nor would he, being by nature extremely pure, conceive a relation of ownership with the altogether impure body. And even though inadvertently fashioned, he would at his will abandon whatever might cause him pain, and take up what might cause pleasure. And (above all) he would

remember : it was by me that this wondrous globe of the universe was fashioned. Every one, in fact, after doing a thing, clearly remembers that he has done it. Further, just as the magician does, without any effort and whenever he wills it, wind up the magical-illusion spread out by himself, even so ought the embodied-soul too (be able to) withdraw this creation. But, of a fact, this embodied-soul is not able to withdraw even his own body (and limbs) without making an effort. Thus then, as we do not notice the doing of any beneficial actions etc., it follows that the creative process emanating from a sentient cause cannot stand to reason. 21.

But It is more-and-beyond, as there is an intimation of distinction. 22.

[Page 32] The word 'but' turns back the objection. That Brahman, omniscient and omnipotent, and eternal, pure, sentient and free by nature, and which is over and above and distinct from the embodied-soul : it is That which we declare to be the Creator of the world. To It the contingencies, such as not doing the beneficial etc., do not apply. For, to It there does not exist anything beneficial to be achieved or anything harmful to be averted, as it is by nature eternal and free. There does not exist in Its case anywhere any hindrance to knowledge or to power, because of Its omniscience and omnipotence. The embodied-soul on the other hand is not of this nature, and to it do apply the defects such as not doing the beneficial etc. But this soul we never declare to be the creator of the world. Whence do you get this ? On account of an intimation of distinction. Declarations like [Brih., ii. 4. 5]—"The Self, forsooth, My dear, is to be seen, to be heard, to be reflected upon, to be meditated upon ;" or [Chh., viii. 7. 1]—"He is to be sought after, to be cognised ;" or [Chh., vi. 8. 1]—"It is then, My dear boy, that one becomes of-one-essence with Existence ;" or [Brih., iv. 3. 35]—"The embodied-soul, surmounted by the Omniscient Self....."—and many more of a like nature, which assert a distinction of the agent and the action and so forth, designate the Brahman as being more-and-beyond the individual soul.

But it might be urged that there is also an assertion of non-

distinction, such as [Chh., vi. 8. 6]—"That thou art"—and the like. How could contradictories like distinction and non-distinction be both true? But that is no objection. For, in more than one place it has been established that there is a possibility of both on the analogy of the (elemental) ether and ether-in-the-jar. Further, when there has been awakened the consciousness of the non-distinction by declarations such as [Chh., vi. 8. 6]—"That thou art"—and the like which point out that non-distinction, then there results a falling away of the individual soul's relation to the phenomenal world, and also of the idea of the Brahman as being its creator, inasmuch as that right knowledge wipes out all kinds of dealings-in-phenomena, which are (just) a pageant set afoot by false knowledge. From that point of view, where is the creation, and whence can there be defects such as not doing the beneficial etc.? This transmigratory-world which gives rise to these notions of not doing what is beneficial etc. is an erroneous-perception based upon the failure to discriminate between (the Brahman and) the limiting-adjuncts, consisting of this whole assemblage of bodies and organs, which are the fabrications of names and forms that are themselves figured forth by Nescience: it has, as we have stated time and again, no existence from the point of view of the Highest Truth—even like the feeling of the 'I' as being the subject of birth, death, cutting, piercing, and the like (which really belong to the body only). As long, then, as the notions of distinction (and dealings based upon these) remain un-sublated, so long the intimation of distinction contained in texts of the nature of [Chh., viii. 7. 1]—"He is to be sought after, He is to be known"—testifies to the Brahman being over-and-above (the individual soul), and so dispels the contingency as to our theory being open to defects like not doing what is beneficial, etc. 22.

And, because of the analogy of stones and the like, there is no cogency in that. 23.

[Page 33] Just as in the world, in the case of stones, which all partake of the common characteristic of 'earth-ness,' there are some stones, very precious, like diamonds, lapis lazuli, etc., others of medium excellence like crystals, and others of low value, only fit to be thrown at dogs and crows, so that we notice

a manifold variety amongst them; and just as of seeds which are grounded in the same soil we notice a very large variety in their leaves, flowers, fruits, smell, sap, etc., as in a sandal or a *kimpāka*; and just as one and the same food-juice produces diversified effects like blood, etc. and like hair, down, and the rest: even so it stands to reason that one and the same Brahman should give rise to the differentiation between the individual selfs and the Highest Self, and to the manifoldness of the creation. Hence, there is no cogency in that, that is to say, there is no cogency in the defect imagined by our opponent. The word 'and' (in the sūtra) suggests a cumulation of arguments like the authoritative-ness of the Scripture, the nature of the modified forms as merely due to word-initiation, and the other analogous instance of the diversity of things visible in the dreams. 23. Here ends the Topic (7) entitled Creator Higher than the Soul.

TOPIC 8 : CREATOR'S CAUSAL PARAPHERNALIA

(Sūtras 24-25)

If one says No, because the accumulation [of causal paraphernalia] is observed, we demur: for, it is like the milk. 24.

The statement made that the sentient Brahman, one without a second, is the cause of the world, cannot be maintained. Why? Because the accumulation [of causal paraphernalia] is observed. For, in ordinary life, we observe pot-makers, [weavers], etc., the authors of jars or pieces-of-cloth or the like, producing their respective handicrafts after having furnished themselves with materials and instruments like clay, staff, wheel, threads and such-like accumulation of manifold causal paraphernalia. The Brahman, however, you intend to set forth as being devoid of any assistance. If it is not going to gather together other means-of-work, how can you maintain its character as a Creator? Consequently, Brahman is not the cause of the world. To this we reply that it is no [valid] objection; for, as in the case of the milk, this can be explained as a consequence of its peculiar innate-nature. Just as in the world we find milk or water of its own accord getting modified into curds or ice without needing for it any extraneous means, just so it might be in this case too. — But it

might be urged, even the milk and the like do require extraneous means, like heat etc., while they are becoming transformed into curds, etc.: how can you then say—‘for, it is like the milk’? This is no objection. That kind of modification and that degree of modification which milk of its own accord undergoes, that same kind and degree of modification towards the form of the curds is merely accelerated by the use of heat etc. If indeed milk were not to possess of its own accord an innate proclivity for becoming curds, even the heat etc. would not by force succeed in transforming it into curds. For, surely, the wind or the ether cannot be perforce compelled to assume the form of curds by heat and the like. The presence of causal auxiliaries merely contributes to the perfection of the effect. But Brahman is already possessed of a perfection of powers : not by anything extraneous is its perfection to be brought about. There is a Scriptural text to that effect [Śvet., v. 2]—[Page 34] “There exists neither the body nor the organs to Him, and we do not see any one who is His equal or His superior; we hear of His highest and diversified power, as also, of knowledge and strength and activity, which are His by nature.” Therefore we can understand, even of the one solitary Brahman, in consequence of its possessing a miraculous power, this diversified modification, as in the case of the milk. 24.

And also like [the analogous cases of] the gods etc. of ordinary experience. 25.

This may be so. In the case of non-sentient objects like the milk etc. there can well result the modification in the form of curds, without the necessity of any extraneous means, because that is an observed fact. But pot-makers etc., who are sentient beings, are observed to proceed to produce their respective handicrafts not without a full equipment of means and instruments. How then can the Brahman, sentient as it is, start the activity without any assistance? — We reply, like the [analogous cases of] gods, etc. Just as in the world we notice gods, manes, sages and such other personalities of great prowess,—sentient too as they all are,—yet, irrespective of any extraneous means and by reason of being endowed with peculiar potency, creating, alone and by the act of mere meditation, many a body and a palace and a car and the like

of diversified make-and-pose—as can be asserted on the authority of the Samhitās, the Brāhmanas, the Histories, and the Purāṇas; and just as the spider spins out webs out of itself, or the female crane conceives without semen, or the lotus-plant moves from one lake to another (adjoining) lake without requiring any extraneous means of travel: even so the sentient Brahman too can create the world out of itself and without standing in need of any extraneous means.—If against this one were to urge that analogies of the gods etc., which are adduced for the Brahman, are not quite on a par with the case sought to be explained by analogy. For, the gods etc., do have their non-sentient body which can serve as the material for fashioning miraculous objects like other bodies etc. and not their sentient souls; while in the case of the spider it is its saliva produced by eating smaller insects which, when hardened, becomes the thread of the web: and as to the female crane, she conceives upon hearing the noise of a thundering-cloud; and as concerning the lotus-plant, finally, from one lake it approaches another lake by its own non-sentient body, which is propelled by an (in-dwelling) sentience, as does the creeper the tree; and it is not a case that, being itself non-sentient, it is able to perform the movement towards another lake. Therefore, all these analogous instances do not fit in with the Brahman. To this our reply should be: that is no defect. For, what was wanted to be conveyed was just the difference of these cases with the (other) parallel instances of the pot-makers and the like. While, then, the pot-makers etc. and the gods etc. are both equally sentient, the former, before beginning an action, stand in need of extraneous means, but not the latter; in an analogous manner the sentient Brahman for its parts could also similarly [Page 35] dispense with *all* extraneous means—this was all that was intended to be conveyed by the adduced analogies of the gods and the like. The point is that it is not an invariable rule that exactly the same potency that has been observed in the case of the one should precisely tally with that of all others.

25. Here ends the Topic (8) entitled Creator's Causal Paraphernalia.

TOPIC 9 : IMPARTITE'S PART-MODIFICATION

(*Sūtras* 26–29)

The conclusion then stands established that the cause of the world is the sentient Brahman, one without a second, which, on the analogy of the milk and the like, or the gods and other instances, assumes a modification of itself, without standing in need of any other extraneous means. By way of a further probing of the ascertained conclusion of the Sāstra, he is now bringing up another objection once more—

Either a wholesale transformation, or a disturbance in the Scriptural-texts about the impartiteness. 26.

There would arise the contingency of “ whole-sale transformation ” that is to say, modification in-the-form-of-the-effect of the whole Brahman, because there can be no parts to it. If Brahman had been, like the earth and similar objects, constituted of parts, then it would have been possible for one of these parts to get modified, while the other part could have remained unmodified. But we learn of the Brahman as being impartite from Scriptures like [Svet., vi. 19]—“ Without digital-parts, without activity, tranquil, stainless, spotless,” or [Mundaka, ii. 1. 2]—“The Purusha verily is divine, devoid of definite dimensions, unborn, and possessed of both the without and the within,” or [Bṛih., ii. 4. 12]—“This Great-Being is endless and unfathomable and solidly constituted out of knowledge alone,” or [Bṛih., iii. 9. 26]—“He is that Ātman (describable as) ‘not-this,’ ‘not-that,’” or [Bṛih., iii. 8. 8]—“Neither gross nor subtle,”—and others which deny all specifications in its case whatsoever. So then, as there is not any possibility of a modification in one part, the contingency of a whole-sale modification having arisen, there would result an outright destruction (of the Brahman), which would also involve the futility of the instructions to seek and obtain a sight of the Brahman, seeing that the effect is to be seen by us all without any effort whatsoever, and there is no possibility of the Brahman remaining over and above the effect : hence too the Scriptural statement about Brahman being unborn would be vitiated. And if, with a view to the removing of this defect, you

were to assume parts to the Brahman, still the texts just adduced teaching the impartite nature of the Brahman, would become disturbed. Furthermore, if we assume parts to it, there arises the contingency of its non-eternality. In every way then this theory cannot possibly be sustained : Thus the objection. 26.

But on account of the Scripture : the Scripture being the (only) basis of it. 27.

By the word ' but ' he dispels the objection. There certainly exists no flaw in our theory. To begin with, there is not the contingency of a whole-sale transformation. Why? From Scripture. Just as the Scripture declares to us the creation of the world from Brahman, [Page 36] even so there is a declaration as to the existence of the Brahman independently of its modifications, inasmuch as there is an assertion of the Cause and its modifications as being distinct from one another : namely [Chh., vi. 3. 2]—" And the Divinity reflected : ' having by means of this soul, this Self, subsequently entered these three divine entities, let me unfold the names and the forms, ' " or [Chh., iii. 12. 6]—" Thus much is his greatness : greater than that is the Purusha. All the beings form a quarter of Him, His immortal three-quarters are in the heaven ; " and the like. Also there are passages which speak of the heart as His abode, and passages which speak of the (individual soul's) merging back into Existence. If the entire Brahman had been used up in the process of transformation into its effect, then the specification referring to the condition of deep-sleep, namely, [Chh., vi. 8. 1]—" Then, My dear boy, he becomes merged back into Existence "—would become inapplicable inasmuch as the individual soul remains always merged into the essence of the modified Brahman (as being itself a modification of the Brahman), while (beyond the Modified Brahman) there exists no unmodified-Brahman (into which it can become merged during deep-sleep). Also there are texts placing the Brahman beyond the pales of our perceptive-organs, whereas the modifications of the Brahman (which by hypothesis exhaust the Brahman) are always within the range of the perceptive-organs. Hence there does exist an unmodified-Brahman.—Nor does this involve a disturbance of the Scriptural passages regarding impartiteness, because we assume likewise its impartiteness on the strength of

the Scriptural declarations themselves. For, Brahman has the Scriptures as the only basis and the word-testimony as the only means-of-proof, and it is not open to sense-perception. We have therefore to believe in it just as the Scripture teaches it. And the Scripture propounds both these in the case of the Brahman : its part-transformation and its impartiteness. Why, in the case of charm-beads, spells, herbs and the like, as we know them in the world, we see their manifold potences depending upon differences in place, time and other circumstances, and giving rise to many self-contradictory effects. Now, if even these cannot be determined by mere logic, in the absence of special instruction as to what specific thing has what particular potences helped by an assignable set of auxiliaries, what particular spheres of action, leading to what particular consequences: how much the more reason there is not to expound, except with the concurrence of the Scripture, the characteristics of Brahman, the real nature of which is beyond the ken of even thought! Thus, likewise, declare those well-versed in the Purāṇas [Mbh., vi. 5. 12]—"Those objects indeed that are beyond thought : them one should not bring under the yoke of logic. That which is beyond the normal-phenomena—such is the definition of the Unthinkable." Hence it can arise only from Scripture: this understanding of the true-nature-as-it-is of things that are beyond the pale of sense-perception.

But, it might be urged, even the Scripture cannot make us acquiesce in a self-contradictory statement, such as, that the Brahman is impartite, that it assumes a modification, and that the entire whole is not modified. If Brahman be at all impartite, either it ought not to be ever modified, or the entire whole ought to be modified. And to assume that in some of its aspects it gets modified, while in the others it remains [Page 37] unmodified, virtually makes it possessed of parts owing to this assumed difference in aspects. For, it is only in matters pertaining to an action that even a self-contradictory teaching like [under Jaim. Sūtra, x. 8. 6]—"He takes the Shodāśin-cup in the Atirātra rite : He does not take the Shodāśin in the Atirātra rite,"—can have the perceived contradiction therein composed by resorting to an option in practice; because an action, after all, rests upon an individual's will. But in the present case even recourse to option cannot possibly remove the contradiction, because the nature of

reality does not depend upon any man's will. Hence the view contains an ineradicable difficulty. We reply that it is not so; because we can assume the differences in the aspects (of the Brahman) as merely the fabrications of Nescience. For, surely, owing to a difference in aspects fabricated by Nescience, the thing-as-it-is cannot be rendered liable to partition. Because to a person suffering from eye-disease the moon appears as if double, the moon in reality cannot of course be double. It is through a difference in aspects consisting of names and forms which are the fabrications of Nescience—aspects, one of them developed and the other undeveloped, and both of them not susceptible of a discrimination as to whether they are or are not other than That (Brahman)—that the Brahman comes to be the basis of all phenomenal dealings involving liability to modification; whereas in its ultimate real nature It transcends all the phenomenal dealings and abides as ever unmodified (and unmodifiable), seeing that the distinction of names and forms is a fiction of the Nescience and is merely word-initiated, so that (in reality) it does not militate against the impartiteness of Brahman. Nor need we suppose that the Scriptural statement about modification primarily intends to teach the modification itself, because no fruit is made known as resulting from such a comprehension. It is, on the other hand, intended to teach the real-essence of Brahman as devoid of all phenomenality, because a fruit is declared as resulting from that comprehension. Thus a Scriptural passage [Bṛih., iv. 2. 4]—introducing the theme with—"This is that 'Not-this,' 'Not-that' Ātman"—goes on to say: "Now hast thou verily reached the Fearless, O Janaka!" Accordingly, in our theory there exists no possibility of any flaw. 27.

And besides we do have similar and manifold creations in the self also. 28.

Further, one need not here contentiously ask, how one and the same Brahman can have a multiform creation without violating its real nature, since, even in a self who is one and who is seeing a dream, a multiform creation without violating his real nature is declared to arise in the text commencing with [Bṛih., iv. 3. 10]—"There there are no (real) cars, nor yoke-animals, nor paths; and yet he creates the cars, the yoke-animals, and the paths." And in

ordinary experience too we come across manifold creations of elephants, horses, and the like amongst the gods and amongst the magicians, etc., without thereby vitiating their real (unitary) nature. Similarly, even in the unitary Brahman—and without destroying its real nature—there can exist a multiform creation. 28.

And because the same objections can be urged against your own view. 29.

[Page 38] In our opponent's own theory also the same flaw exists. The view endorsed by the follower of the Pradhāna-theory is that the impartite, infinite Pradhāna, void of sound and other qualities, is the cause of the effect, which is divisible into parts, of limited dimensions, and possessed of sound and other qualities. Even in that view there arises the contingency of a wholesale modification of the Pradhāna which is impartite, or a vitiation of the assumption of its impartiteness. But it would be pointed out that they do not at all assume the Pradhāna to be impartite. There are the three eternal qualities of Sattva, Rajas, and Tamas. The Pradhāna is merely a state of equipoise of these (three qualities), and so with these very parts it is capable of division into parts. But the present defect cannot possibly be remedied by this kind of liability to partition, since Sattva, Rajas, and Tamas are each of them equally impartite. And if one of these in turn, with the other two as auxiliaries, is to be the constituent cause of a similar world of phenomena, then (by parity of reasoning) there does arise the contingency of the same objection being urged against your own view. But inasmuch as reasoning is always unstable [Brahmasūtra, II. i. 11,] if you are inclined to (flout our reasoning and) believe in the Pradhāna's being in fact capable of partition, then there presents itself the contingency of its being impermanent, etc. And if your idea were that it is the potences as inferred from the diversity of effects that are the (so-called) parts, those can be made equally available in defence of the propounder of the Brahman-theory. — In a like manner in the case of the follower of the theory of Atoms, when he assumes the conjunction of one atom with another, if, as being without parts, the atom is to come into contact with another atom in its entirety, then, as there could be no further increase in the

size, the result (of the conjunction) would be a mere atom (and not a binary). And if the atom were to come into contact at some of its parts, then that would militate against the ascription of impartiteness to the atom, so that in this theory also there arises the same contingency (as in ours); and that ought not to be therefore pressed against just one of the opposing theories only. As for the propounder of the Brahman-theory, he *has* refuted the objection directed against his own view. 29. Here ends the Topic(9) entitled Impartite's Part-Modification.

TOPIC 10: FULLY-EQUIPPED DIVINITY

(*Sūtras* 30-31)

We have said that even from the unitary Brahman there can properly arise this manifold assemblage of modification in consequence of the Brahman being endowed with manifold potences. But, it might be asked, how do we know that the Highest Brahman is joined to such manifold potences? The reply follows—

[The Divinity is] endowed with everything, because it is thus declared. 30.

We have to assume that the Highest Divinity is equipped with all powers. Why? Because it is thus declared. For, the Scripture declares the joining of the Highest Divinity with all powers: for instance [Chh., iii. 14. 4]—"Possessed of all actions, all desires, all odours, all tastes; encompassing all this, the unspeaking, the unconcerned;" or [Chh., viii. 7. 1]—"He of truthful desires and truthful purposes;" or [Muṇḍaka, I. i. 9]—"He who knows all and realises everything;" [Page 39] or [Bṛih., iii. 8. 9]—"It is at the behest of this, the Immutable One, O Gārgī, that the sun and the moon stand sustained;" and others of like import. 30.

If you say Nay, by reason of the absence of organs (of perception and action), the explanation has been already given. 31.

This might be. But the Scripture declares the Highest Divinity as being devoid of all organs, as for instance [Bṛih., iii. 8. 8]—"Without the eye and without the ear, and without speech and

without mind;" and the like. How can such a Divinity, albeit endowed with all powers, be able to proceed to activity? For, even the gods and others although sentient and endowed with all powers, we learn, are able to proceed to various activities only because they are equipped with a spiritual body and spiritual organs. Moreover, when there has been a denial of all characterisation to the Divinity in the text [Bṛih., iii. 9. 26]—"Not-this, not-that," how can the Divinity be coupled with all potences?—What was to be said in answer to the above has been already stated before. This Brahman is altogether unfathomable, and penetrable only to the Scripture, but impervious to reasoning. Besides, we cannot lay down the rule that what potency was seen in the case of one, in the same manner it should exist in the case of another also. That the Brahman, in whose case all specifications have been denied, can yet be joined to omnipotence has been already explained by us by setting forth the distinction of aspects as imagined by Nescience. The Scriptural text likewise [Śvet., iii. 19]—"Without hands and feet, and yet swift and able to grasp: He the eyeless sees, He the earless hears"—declares, in the case of the Brahman—albeit destitute of all organs—the possession of all kinds of potences. 31. Here ends the Topic (10) entitled Fully-Equipped Divinity,

TOPIC 11: FINAL END OF CREATION

(*Sūtras* 32-33)

The theory of a sentient First Cause is, from another point of view, again called into question—

No: because of purposiveness (of all activities). 32.

That the sentient Highest Soul should have created this globe of the Universe does not stand to reason. Why? Because of the purposiveness of (all) activities. For, in this world, we never observe any sentient person—where he proceeds to act after previous deliberation—commencing any activity, however slight be the effort involved in it, if it does not sub-serve some purpose of his own: much less an activity involving such a very heavy exertion. And there is the Scriptural text [Bṛih., ii. 4. 5] confirming this consensus of commonsense—[Page 40] "Not indeed, My dear,

does all this become dear unto one in the interest of all this, but rather does all this become dear in the interest of one's own Self." And there is involved a very heavy exertion in this activity, viz. that of creating this globe of the Universe with all its array of details high and low. If now all this (mighty) activity of the sentient Highest Soul is to be assumed to minister to his own (specific) ends, then the absolutely self-sufficient nature of the Highest Self, as endorsed by the Scriptures, would be vitiated. If, on the other hand, there be no purposiveness (in the activity), there would result an absence of the activity itself. And in case you were to say that, just as we at times observe even a sentient person, in a frenzied state, performing, by reason of his intellectual apparatus being out of gear, activities that aim at no benefit to himself, even so might the Highest Self be taken to have gone about the action, then, in that case, the omniscience of the Highest Self, as attested by the Scriptures, would be overthrown. Hence, that a sentient being should have been the author of the creation is a theory that does not hold together. 32.

But, as in ordinary life, it might be mere sport. 33.

The word 'but' negatives the objection. Just as in the world, in the case of one who has all his desires fully satisfied—say of a king or of a royal minister—we do observe, in the way of playings and recreations, various activities of the nature of mere sport and not in anywise aimed at any other extraneous purpose; and just as (movements like) up-breathings and out-breathings etc. take place by very nature and without aiming at any extraneous purpose: even so in the case of the Lord also there can take place, by His very nature, an activity of the nature of mere sport and without aiming at any other purpose. For, of course, there cannot be imagined to exist in the case of the Lord any other purpose, whether we view at it logically or in the light of the Scriptures. Nor can you gainsay what is only the (intrinsic) nature of any one. And although the creation of this entire globe of the Universe might appear to us as a very heavy exertion, yet to the Highest Lord it is but sheer sport; for, He has immeasurable powers. And although indeed, in ordinary life, even in the sports there can be attributed some slight purpose, still, in the present case, not even such a purpose can possibly be posited, because of

the Scriptural declaration of His self-sufficiency. Nor can there result a cessation of the activity, or a frenzied activity, because the Scriptures avow both the creation and the omniscience. Nor finally, should this fact be forgotten that the Scriptural account of creation—as it comes within the sphere of the phenomenal-dealings in names and forms, which are but the figurations of Nescience—is not to be understood from the point of view of the highest truth, but is to be taken as having been aimed at setting forth the Brahman as the real essence of everything. 33. Here ends the Topic (11) entitled Final End of Creation.

TOPIC 12 : INEQUALITY AND CRUELTY

(*Sūtras* 34-36)

Once again is brought up an objection against the Lord being the cause of the origination etc. of the world, with the object of strengthening the view solemnly averred, following herein the maxim of infixing a peg [by shaking it and the soil at its root]—

There is no inequality, nor cruelty, because of (the Lord's) showing due-consideration : so, in fact, it declares. 34.

[Page 41] The Lord cannot reasonably be the cause of the world. Why? Because there arises the contingency of His inequality and cruelty. For, He makes some—e.g., the gods etc.,—experience greatest happiness; others—e. g., the beasts and the like—He makes suffer the greatest miseries; while others still—e. g., men etc.—He allows to experience (both these) in moderation. That the Lord should have created the world with such an unequal dispensation argues in His case the presence, as in that of an ordinary mortal, of love and hatred; and so there arises the contingency of a flat contradiction of the Lord's nature of passionlessness as determined by Revealed-texts and compilations-of-authority. Then again, there arises the contingency of an ascription to Him—because He brings about visitations of sorrows and encompasses the destruction (at Dissolution) of the entire creation—of compassionlessness and of extreme cruelty, for which even the most wicked conceive a loathing. Therefore, owing to this contingency of inequality and cruelty, the Lord

cannot be the cause. To this contingency we make the reply that the Lord does not stand open to the charges of inequality and cruelty. Why? Because of a showing of [due] consideration. If indeed the Lord were to create this creation, with its (patent) inequalities, entirely irrespective of any consideration, then there could arise these two faults: to wit, inequality and cruelty. But He does not function as the Creator irrespective of any considerations. The Lord creates this world together with its inequalities after showing all [due] consideration. What is it to which he shows all [due] consideration? We answer: it is to the merit and the demerit. Consequently, that the creation shows inequalities in consideration of the merit and demerit of the creatures about to be created argues no fault in the Lord. The Lord should rather be viewed upon like the rain. For, just as the rain constitutes the common cause for the production of crops (like) rice, barley, etc., but as regards the differences in rice, barley, etc., it is the peculiar potences inherent in the various seeds of these that constitute the special causes: even so the Lord is the *common cause* for the production of the gods, men, and the rest of the creation, while as regards the inequalities between the gods, men, etc. it is the actions appertaining to the various souls that serve as the *special causes* for the same. Thus, in consequence of His showing [due] consideration, the Lord is not to be arraigned for the faults of inequality and cruelty. — But how do you know that it is out of such [due] consideration, that the Lord, creates this world with its differentiation of the high, the low, and the mid-dling? — For so, in fact, the Scripture declares [Kaush. Br., iii. 8] — “It is indeed He alone who makes that man do a good action whom he desires to lift up to these higher worlds; and it is He likewise who makes another man do a bad action whom he desires to drag downwards;” or again, [Bṛih., iii. 2. 13] — “Good does one become by good action, bad, by bad action.” Smṛiti too shows that the Lord metes out rewards and punishments only in consideration of the specific actions of beings, as in (the Bhagavadgītā iv. 11) — “Whatsoever people in whatsoever manner be-take themselves to me, them in that very manner I accord treat-ment;” — and others of the same kind. 34.

If you say, ‘there is no Karman, because of non-differentiation,’ we reply: No, on account of beginninglessness. 35.

[Page 42] In consequence of the pronounced-declaration of non-differentiation prior to creation, as in the text [Chh., vi. 2. 1] —“ Existence alone, My dear boy, was all this in the beginning: one and without a second,” there does not exist any Karman out of consideration for which there might ensue inequalities in the creation. For, Karman comes into existence only at a time subsequent to the creation, as being dependent upon differentiation into the body and the like; and if the differentiation into the body and the like were to be dependent upon the Karman, there would arise the logical defect of a mutual interdependence (or of reasoning-in-a-circle). Consequently, if the Lord were to proceed, subsequent to such a differentiation, to create (in [due] consideration of the merit and demerit), He might do so., But prior to the differentiation, there being the absence of any Karman which could be the cause of the diversity (in the world), we are compelled to posit the *first* creation as being free from all inequalities. To this objection we demur, because of the beginninglessness of this transmigratory-creation. It might have been a defect, if this transmigratory-creation ever had had a starting-point. But the world, being without a beginning, and, between the Karman and the inequality in the creation there being established an unending chain of the relation of cause and effect—as in the case of the seed and the sprout—there is no contradiction present in the Lord’s creative activity. 35.

But how do you know that this transmigratory-world is without a beginning? So he recites the following—

It stands to reason, and is also attested. 36.

The beginninglessness of the transmigratory-world stands to reason. For, if it were to have a definite starting-point, coming into existence all of a sudden, (and without adequate causes) as it must then do, there would arise the contingency of even the liberated souls (in whose case all ground for rebirth has been destroyed) being again born into the world, as well as the contingency of one’s being made liable for what he might not have himself done, inasmuch as no assignable cause can then exist for the inequalities of happiness and unhappiness (in the world). And it

has been said that the Lord cannot be the cause of this inequality. Nor can Nescience alone and by itself be the cause of this inequality, because it is of a uniform nature only (and as such incapable of causing any inequality). For, Nescience can be the cause of inequality only as circumscribed by the Karman induced by latent-impressions due to afflictions like passion, etc. But we cannot have a body unless there is Karman, and there cannot be Karman unless there be a body : so that there arises the fault of mutual interdependence. If, on the other hand, we assume a beginninglessness, there can be offered an explanation in conformity with the maxim of the seed and the sprout, and so there would be no defect of any kind.—Further, we have it attested also—this beginninglessness of the transmigratory-world—in the Scriptures and the Smṛitis. In the Scriptural-text, to begin with, there is an indication of the world's beginninglessness inasmuch as, at the very starting-point of the creation, the words [Chh., vi. 3. 2]—" By means of this Soul, this Self"—designate the embodied-self by the term *jīva* or individual-soul, which implies a sustenance of life (by the individual-soul in some existence prior to the creation that is to be). If there had been any definite beginning to the series-of-transmigrations, how could there have been, at the very threshold of the creation, a designation by the word *jīva*,—which implies as its basis a sustenance of life,—if the self had never (in any earlier creation) sustained life at all ? Nor can you say that it is an (anticipatory) designation : because he is going to sustain life in the time to come ; for, more powerful than the relation that is to come is the relation that has already been, because that stands forth as an accomplished fact. [Page 43] The words of the Saṁhitā also [Rīgveda, x. 190. 3]—" The Creator fashioned the Sun and the Moon as before,"—testify to the existence of an antecedent fashioning (of the Sun, the Moon, and the whole creation). In the Smṛitis too we come across the beginninglessness of transmigratory-world, as in [Bhagavadgītā, xv. 3]—" There is not to be perceived here any form of it : neither the end, nor the beginning, nor the support." And in the Purāṇa it has been established that there is no measuring of the world-creations that have been in times gone by or that are to follow in the time to come. 36. Here ends the Topic (12) entitled Inequality and Cruelty.

TOPIC 13: EVERYTHING IN ORDER

(*Sūtra* 37)

In the Vedic theory as hitherto demonstrated,— viz., that the sentient Brahman is the constituent as well as the efficient cause of the world—the defects alleged by our opponents, such as Disparity-in-Nature, and the like, have been now set at rest by the Great Teacher. Now, being about to commence a section principally devoted to a refutation of other people's theories, he brings to a conclusion the section principally devoted to (showing) the acceptability of his own theory—

And because all the qualities properly fit in. 37.

Since, with the acceptance of this Brahman as the cause of the world, all the characteristics that are demanded of a cause are seen, in the manner hitherto shown, to harmoniously subsist therein—namely, the Brahman's being Omniscient, Omnipotent, Master of the great Illusion, and so forth—therefore, no more can this Upanishadic theory be called into question. 37. Here ends the Topic (13) entitled Everything in Order.

Here ends—in the Work of the holy and blessed Feet of the Revered Śaṅkara, the Pupil of the holy Feet of the Revered Govinda, the blessed Ascetic-preceptor with the Title of " Paramahansa,"—in this Comment expounding the Real Nature of the Embodied-Self—the First Quarter of the Second Chapter.

CHAPTER SECOND

QUARTER SECOND

TOPIC I : REFUTATION OF THE SĀMĀKHYAS

(*Sūtras* 1-10)

[Page 45] Although the main-purpose of this Treatise is to expound the true intention of the Upanishadic texts and not, as of some rationalistic system, to establish or refute a dogma by mere reasonings, still it behoves those that claim to explain the Upanishadic texts to rebut systems of thought like that of the Sāmkhyas and others that are opposed in tenor to the true [Vedāntic] philosophy : and it is for this purpose that the following Quarter is undertaken. Inasmuch as the determination of the real purport of the Upanishadic texts was conducive to [the attainment of] the true view, it was the establishment of our own theory by determining that purport that was effected at first ; for, that is of more consequence than a [mere] refutation of the opponent's view. But [we will be told], for the sake of persons desirous of salvation [and not of earthly triumph] it would be proper, as being a means to that salvation, merely to establish what constitutes your own view, which is to help the discernment of the [so-called] true philosophy : of what use then the refutation of the opponent's views, which would [only] engender ill-will for others ? True what you say. Nevertheless the great treatises of the Sāmkhyas and others are accepted by many master-minds : and finding that these treatises [also] profess to teach the " true philosophy," it is likely that some persons of dull intellect may form the notion that even these are to be followed for the acquisition of correct views. And they may come to believe in them because they claim to be based upon profound ratiocination, and also because their authors are declared to be omniscient. Hence it is that an effort is being made to demonstrate their utter worth-

lessness. — But [again it would be urged] already before in Sūtras like [I. i. 5]—"In consequence of 'seing' not the non-Scriptural [Pradhāna]," or [I. i. 18]"By reason of 'desiring' there is no scope for the inference [established Pradhāna]" or, [I. iv. 28] "And with this, all [texts] are explained — are explained"—a refutation of the Sāṅkhya and of other views was effected: why then repeat what had been already done? We reply—The Sāṅkhyas and others, in the establishing of their own theory, go to the length of even citing Upanishadic texts and interpreting them so as to make them conformable to their own theory. What was accomplished before was just to prove that what these persons offer as an interpretation is a sham interpretation, not the correct interpretation. Now, however, the special point is to effect an *independent* refutation of their reasonings without making any appeal to the Scriptures.

By reason also of the impossibility of design and arrangement, not the [Sāṅkhya] inference-[established Pradhāna]. 1.

[Page 46] Now the Sāṅkhyas argue thus:—Just as the pots, plates, and other discrete existences containing in them the common essence of clay, are observed in the world to be preceded by a totality constituted out of clay-essence, so similarly all the discrete existences whatsoever, internal as well as external, are interpenetrated by a pleasure-pain-infatuation nature, and must therefore be held to be preceded by a totality constituted out of the pleasure-pain-infatuation essence. Now this totality constituted out of the pleasure-pain-infatuation essence is no other than the Pradhāna with its three aspects (guṇas), which, like the clay, is non-sentient and which, with a view to achieve the purpose of the Puruṣa, evolves itself, and of its own accord, into the diversified modifications. So also, on the strength of inferential marks like finiteness [Sāṅkhyakārikā, 15], they establish the same Pradhāna. To that we reply—If the view is to be established only on the ground of analogical instances [and not on the authority of the Scriptures], then, we say, that a non-sentient entity, unsupervised by one who is sentient, is never observed in the world to give rise, of its own accord, to modifications calculated to fully accomplish any specific ends of the Puruṣa. For, we notice that in our world objects like

houses, palaces, beds, seats, pleasure-grounds, etc.—capable as these are of securing and warding off pleasure and pain [respectively] as occasions may arise—are constructed by talented artisans. In the same manner all this external world, the earth and the rest, which is capable of affording fruition unto all one's varied Karmans, as also the internal world, the body and the rest, with its attendant distribution into various classes, and exhibiting several specific dispositions of limbs, and forming the basis for our experiencing the fruition of multiform Karmans,—such as we actually see it to be : how can all this, impossible as it must be for even talented artisans—the most honoured amongst them—to asmuchas mentally grasp : how can the non-sentient Pradhāna construct it ? For, we do not observe such a power [of construction] amongst logs and stones and the like. So also in clay and the like, we observe an orderly arrangement of a specific form [only] when they are supervised by the pot-maker and others. On the same analogy there ensues the contingency of the Pradhāna also being regarded as supervised by some one else who is sentient. Further, [when the clay and the pot-maker together originate the pot.] there seems to be no constraining reason why the nature of the basic cause should be determined only by taking into consideration the nature of the material cause like clay, to the exclusion of all consideration of [the nature of] external (efficient) cause like the pot-maker. There is no contradiction involved if this be admitted : nay, we would thereby conform to the Scriptures by acknowledging a sentient [first] cause. Hence, on the strength of the argument that design-and-arrangement remains unexplained, no non-sentient world-cause could be established by inference.

On the basis of the word *cha* (also) [in the Sutra] the author understands “as well as by reason of the impossibility of the [alleged] homogeneous-constitution (anvaya) etc.,” and thereby he supplementarily establishes the untenability of one other [Sāmkhya] inference. For, it is not possible to maintain that the discrete-existences, internal and external, are constituted out of pleasure-pain-infatuation, seeing that pleasure and the others are felt to be subjective, whereas sound and the other [physical qualities] are felt to be not of the nature of these, themselves, but are felt to be rather the causes (occasions) of these. Further, even

though the sound and the other [physical qualities] remain the same, still, under different emotional-attitudes, differing varieties of pleasure etc. are experienced.— Then again, because the different discrete and finite existences like the root, the sprout, etc. are observed to be preceded by cohesion [of seed, soil, water, light, air, etc.,] and because the different internal and external existences are discrete-and-finite, therefore, if one is going to argue that these latter must also be preceded by the cohesion [of the three aspects with each other in varying proportion], then there will ensue the contingency of regarding even these aspects of Sattva, Rajas, and Tamas as themselves preceded by a cohesion [of some other basic causes], seeing that the aspects also possess the same discreteness or finiteness. — Lastly, as to the relation of cause and effect [as by itself a proof for Pradhāna], we see that relation in the case of beds, seats, and the like, which are effects brought into existence after intelligent-supervision, and therefore it is not possible to conceive that the different discrete existences, internal and external, could have, on the ground of that relation of cause and effect, any non-sentient principle as their [first] cause. 1.

As also because of the [impossibility of] activity. 2.

[Page 47] Never mind the design-and-arrangement. For the effecting of the same you cannot any better establish that activity—that deviation from the state of equipoise—that grouping-together of the Sattva, Rajas and Tamas with one as dominant and the other two as subsidiaries—that proclivity for originating specific products—as belonging to Pradhāna by itself, independently, because we do not observe it in the case of clay and the like, nor in the case of a chariot and the like. For, it is not the case that clay and the like, or the chariot and other objects, being by themselves non-sentient, and neither supervised by sentient beings like the pot-maker and others, nor by a horse and the like, are ever seen to put forth activity calculated to bring about a specific effect (or result). And from what is observed we prove what is not [and cannot be] observed. Hence, even on the ground of the impossibility of explaining activity, the non-sentient [Pradhāna] is not to be inferred as the world-cause. — But [our opponent may say], no more do we observe any activity in

the solitary sentient. That is very true. Nevertheless what we do observe is the activity of the non-sentient chariot etc. when it is joined to some sentient being. Yes; but we do not find the activity actually residing in the sentient being which is joined to something non-sentient. What then is the correct hypothesis? Is the activity to belong to that wherein it is actually perceived, or to that, being joined with whom it is observed to ensue? Is it not reasonable [our opponent may ask] to ascribe the activity to that in which it is actually seen, because we actually observe both [the activity and the chariot which is its substratum]; whereas there is no direct-perception—as there is of the chariot and the like—of the sentient as being, by himself, the substratum of the activity in question? Even the very existence of the sentient as conjoint with the body in which activity subsists is in fact to be proved by inference only, seeing that a living-body is found to be distinct-in-nature from a merely non-sentient chariot and the like. And it is as a consequence of this that the Materialists, finding that the sentiency can be perceived only when the body is perceived, and that the same cannot be perceived when the body is not perceived, have come to the conclusion that the sentiency belongs [as a property] to the body itself [there being no need to postulate an independent Ātman]. Hence, [concludes our opponent,] the activity belongs to the non-sentient itself. To this we reply—We do not wish to assert that the activity does not belong to where we all observe it, *viz.*, the non-sentient [chariot, or body]. Let it by all means belong to it: only we wish to point out that the activity proceeds from the sentient; because where this is, that is; and where this is not, that is not. Just as, that [peculiar] modification in the shape of [emitting] heat and light, which we see subsisting in the [burning] log-of-wood and the like, and which we do not perceive as existing in the fire by itself [without any fuel], has nevertheless to be regarded as proceeding from none but the fire [as its source], since it is observed upon its (fire's) contact, and not observed upon its separation; even so here. As to the Materialists, finding that it is the sentient body [of the horse etc.] that originates activity in the non-sentient chariot and the like, it is not-inconsistent [from their point of view] that they should concede the sentient to be the source of the activity.

If it be urged—In your view the Ātman, although joined to the body etc., cannot, by reason of his having the nature of mere intelligence and nothing else,* itself move, and cannot [a fortiori] be a possible source of the activity [in others]; we say, No; for, like a magnet, or like the [qualities of] colour etc., he can, albeit devoid of activity himself, cause activity [in others]. Just as [that it to say] the magnet-bead, although itself not moving, can be the cause of the movement of the iron; or just as objects like colour etc., themselves not moving, can cause movements of the [senses of] eye etc., even so the Lord, although himself without movement, still, being omnipresent, and omniscient and omnipotent, as also the inward-soul of everything, can fitly cause everything else to move. And if it be argued that He, being severely alone [Page 48], cannot be properly the cause of motion, as there is nothing besides him that he can move, we say, No; for, this objection has been more than once rebutted by us on the ground of the infusion of the Cosmic Illusion which, through nescience, sets afoot all the varied names and forms. Hence it follows that activity becomes possible only on the theory of an omniscient Lord as the cause, and not on the theory of anything non-sentient as the cause. 2.

If it be said—on the analogy of the milk, and of the water [Pradhāna can have activity], there too, [we reply, is the presence of the Sentient]. 3.

Well then, just as milk, itself non-sentient, moves of its own accord for the nourishment of the calf; or just as water, itself non-sentient, flows downwards of its own accord for the benefit of mankind; even so may the Pradhāna, itself non-sentient, put forth, of its own accord, activity for the purpose of accomplishing the ends of the Purusha. This, we reply, is not soundly argued; because, even there, in the case of the milk and of the water, we have to infer that the activity is only caused by their

* Reading *mātravyatirekeṇa* in line 22. The reading *mātravyatirekeṇa*, although given by some editors, does not seem to have sufficient Ms. authority. It can, however, be made to yield good sense. With that reading translate: If it be urged—in your view the Ātman, although joined to the body etc., cannot possibly have an activity over and above his nature as pure intelligence, and so it cannot become a source of any activity; etc.

being under the direction of a sentient cause ; because in the mere non-sentient chariot, as is in fact assented to by both the parties to the dispute, there is not observed any activity. There is also the Scripture [Brih. Up., iii. 7. 4]—" He who, abiding amidst waters, controls the waters from within ..."; or [ibid., iii. 8. 9]—" It is at the behest, O Gārgī, of this the Immutable that the rivers flowing eastward and in other directions move on ;" which proclaims the Lord as being the controlling cause of all the movements in the world down to the tiniest tremor. Consequently, the illustration of the milk and the water that is adduced is no illustration [allowable by us], because [to us] it is [not an indubitably established fact—as all illustrations must be—but] a matter falling under the category of what-is-yet-to-be-proved (sādhya). In the case before us, the sentient cow can properly be said to cause the movement of the milk [into the udders] through her affectionate desire, the sucking done by the calf merely occasioning the drawing outwards of the milk. Nor is there any absolute independence [of movement] in the case of the water ; for, flowing does require the presence of a lower level of the ground. And it has been shown [by the Scriptures] that in all such cases there is the need of the sentient. — In Sūtra [II. i. 24]—" If one says No, because the accumulation [of causal paraphernalia] is observed, we demur : for, it is like the milk "—what was intended to be established by the illustration was that even in consonance with the common-sense point of view, it is possible for an effect to take place spontaneously and irrespective of any causal factors outside of itself. From the point of view of the Śāstric truth, however, the need of a [controlling] Lord that has to be acknowledged is by no means intended to be set aside. 3.

And because there is not [in the system] any entity outside [the Pradhāna to act as the controller, it] becomes unrestrained [as regards the activity]. 4.

In the Sāmkhya view the three aspects (guṇas), when remaining in the condition of equipoise, are the Pradhāna; and beyond these naught else that is external to it exists as the source of the activity, or of the cessation-from-activity, of the Pradhāna. As to the Puruṣa he is unconcerned, and can accordingly neither

cause nor inhibit the activity, with the consequence that the Pradhāna remains without restraint. And being so unrestrained, that the Pradhāna at times puts forth its modifications in the form of the Mahat and the rest, while at other times it does not do so : this is unreasonable. As to the Lord, He being omniscient and omnipotent and endowed with the great Cosmic-Illusion, His activity and cessation-from-activity do not involve any contradiction. 4.

And because of its absence elsewhere, [Pradhāna's activity is] not analogous to that of grass and the like. 5.

[Page 49] Be that as it may, just as grass, herbs and the like [when eaten by the cow] get transformed into milk etc., of their own nature and quite irrespective of any other inducing-cause, even so the Pradhāna may assume the modifications in the form of the Mahat and the rest. And if it be asked, how do we know that grass etc. work irrespective of any other inducing-cause, we reply, Because no other cause is observed to be operative. Had there indeed been observed any other cause as operating, then, at our pleasure, it should have been possible to join that cause to the grass and the like and so manufacture milk as much as needed. But we are not able to manufacture it. Hence the transformation of grass etc. takes place of its own accord. So can it be with the Pradhāna. -- To this our reply : Pradhāna can have a spontaneous modification on the analogy of grass and the like provided of course the grass and the like can be assumed to get transformed of their own accord : but we do not make that assumption, because another inducing-cause is actually known to be operative. How is such a cause known to be operative ? "Because of its absence elsewhere." For, it is only *that* grass etc. that is used by the cow that *alone* turns into milk, and not that rejected by her or used up by bulls etc. If the transformation were to be without [extraneous] cause, then grass and the like should have been turned into milk even without coming into contact with the cow's body. Further, just because men are not able to accomplish anything at their pleasure, that does not mean that the effect in question needs no cause at all. For, there is one class of effects that can be accomplished by men, and another class of effects, to be accomplished by supernatural

agency. And men too are able, by employing proper means, to secure grass and the like and manufacture it into milk. For persons desirous of securing plenty of milk make the cow eat plenty of fodder, and thereby get plenty of milk. Hence, the modification of the Pradhāna does not, any more than that of grass and the like, take place of its own accord. 5.

And even though assumed, there is no [assignable] motive [for the Pradhāna's activity]. 6.

We have thus established that there is no spontaneous activity of the Pradhāna. And even though we were, forsooth, to humour your belief and assume a spontaneous activity for your Pradhāna, still there would persist a defect [in your theory]. Why ? " Because of an absence of motive." For, if it is to be argued that Pradhāna's activity is spontaneous and does not stand in need of anything else in connection with it, then just as there is no need of any co-operating cause, even so there will be no need for any motive for that activity; and as a consequence your doctrine that the Pradhāna puts forth its activity for accomplishing the ends of Purusha will have to be thrown overboard. And if our opponent were to urge that it is the co-operating cause that the Pradhāna can dispense with, but not as well the motive for its activity, we have to demand that he ought to exactly point out the motive alleged for Pradhāna's activity; whether it is the Purusha's pleasure-pain experience, or his salvation, or both. If it be the pleasure-pain experience, what kind of a thing can it be in the case of the Purusha whose real nature permits of no kind of accretion [for either the removal of an existing deficiency, or the acquiring of an adventitious property] ? And if assumed, it would involve the contingency of an absence of liberation for the Purusha. If [the motive be] liberation, then [Page 50] liberation being already, even anterior to the Pradhāna's activity, a *fait accompli* for the Purusha, that activity would become unmotivated; and as a consequence sound and the other objects in the world will remain unperceived by anybody. And even if, finally, a double motive be assumed, still, in as much as there is an infinite number of forms which the Pradhāna can assume and which the Purusha has to perceive [one and all], there is sure to ensue the same absence of libera-

tion. Nor can the activity be intended to dispel the longing [that might otherwise be felt]. For, the longing cannot belong to the Pradhāna which is non-sentient. Nor can the Purusha, pure and partless as he is, conceive any longing. If, as a last resort, the activity were to be believed in, as otherwise there would ensue the contingency of the [Purusha's inherent] power to perceive and the [Pradhāna's inherent] power to transform, itself being rendered nugatory, then, just as [admittedly] the power to perceive cannot be annihilated, so also the power to transform cannot be annihilated, thereby, once more, giving rise to the contingency of an absence of liberation, because the Samsāra will have to remain unannihilated. Consequently, it does not stand to reason to say that the Pradhāna's activity is for the sake of the Purusha. 6.

And if on the analogy of the [lame and the blind] man, and of the magnet, even there [the argument is defective]. 7.

Let that remain. Just as a certain person endowed with the power of seeing but destitute of the power of movement—*i. e.*, a lame man—might mount upon the back of another person—the blind man—possessing the power to move but deprived of the power to see, and might lead to the latter's movement; or just as the magnet-piece, although itself not moving, occasions movement in the iron; even so might the Purusha originate activity in the Pradhāna: and it is on the strength of this analogy that our opponent might again enter the arena. To that we make the rejoinder that even so there is no getting rid of the deficiency. There ensues, to begin with, the defect of abandoning the accepted position; for, there is the [Śāṅkhya] assumption of the Pradhāna spontaneously putting forth its activity, and the assumption, further, that the Purusha does not originate the activity. Further, how could the unconcerned Purusha originate the activity in Pradhāna? For, the lame man [of the illustration] guides the movement of the blind man by means of speech etc. There cannot exist any such guiding activity in the Purusha, who is incapable of all activity whatsoever. Nor will he occasion movement by mere contiguity, as does the magnet: because, as the contiguity is an eternal fact, there would ensue eternal activity [and no liberation]. In the

case of the magnet whose contiguity can be adventitious, there is the possibility of causal-activity for securing the contiguity, and the magnet also needs [once in a while] to be polished. Hence, the analogy of the [lame and the blind] man and of the magnet cannot be adduced. Thus then, the Pradhāna being non-sentient, and the Purusha being utterly unconcerned, and there being the absence of a *tertium quid* to bring them into relation, their relation cannot be established. And if a relation be assumed [merely] because there is the capacity for being related, then, inasmuch as that capacity cannot be destroyed, there would again ensue the same contingency of an absence of liberation. And [even if the analogies now adduced are held to explain the activity still,] as before, so here too can be urged the various alternatives eventuating the absence of a motive [for the activity]. Contrariwise, in the case of the Supreme Lord, He is unconcerned from the point of view of his real ultimate nature, while He can [yet] be the source of activity when viewed in relation to his power of Cosmic-Illusion, And this is the superiority of our own position. 7.

And also because the relation of dominance [and subservience] cannot be made cogent. 8.

And for this other reason too activity on the part of the Pradhāna is not possible. For, when the [three] aspects, Sattva, Rajas, and Tamas, abandon their [assumed] nature of natural subservience and dominance [in turn], and abide in their own [quiescent] nature of equipoise, that is the condition of the Pradhāna. [Page 51] Now in that condition [the three aspects], being self-determined as regards their own nature and unwilling to forego that nature, cannot possibly enter, with reference to one another, into the relation of subservience and dominance: and there being no extraneous factor to bestir and compel them, there cannot result the origination of Mahat and the rest, which requires a disturbance in the equilibrium of the aspects. 8.

And in case another inference [to meet the defect pointed out] be formulated, yet by reason of the privation of the power of intelligence [in Pradhāna the defect would persist]. 9.

But still it might be urged—We will formulate the inference in another manner so as to avoid the contingency of the defect just pointed out: for we do not, forsooth, assume the aspects to be absolutely self-determined and immutable, as there is no valid proof for it. The nature of the aspects has always to be assumed conformably to the functions to be performed by them. Accordingly we can attribute to the aspects that type and variation of nature which would adequately explain the functions that they have to put forth. As a matter of fact it is our assumption that the nature of the guṇas is [constantly] mutable. Hence, even in the condition of equipoise, the guṇas can be taken to already possess the potentiality for being thrown into a state of uneven-poise.—Even so, [we reply] inasmuch as the Pradhāna is devoid of the power of intelligence, the defects already urged above, viz., impossibility of design-and-arrangement, and the others, remain intact. And in case you were to infer, for your Pradhāna the power of intelligence [because you require it], then you would cease to be our antagonist, because belief in one, sentient material-cause producing the infinite variety of this world is practically an assent to the Brahman-theory. Moreover, even when you ascribe to the guṇas, while yet abiding in the state of equipoise, the potentiality for being thrown into an uneven-poise, yet, in the absence of a specific inducing-cause, they may not at all [translate that potentiality into actuality] and be thrown into the uneven-poise, or in case they are so thrown, there being again an absence of any specific inducing-cause in the matter, they would always be thrown into that condition of uneven-poise, so that even the defect noticed in the immediately preceding [Sūtra] does stand attributable. 9.

And it is incoherent because of contradictions. 10.

Further, this Sāṅkhya theory is self-contradictory. Sometimes they enumerate seven indriyas, sometimes eleven. Similarly, in some places they advocate the origination of the Tanmātrās from the Mahat, in other places, from the Ahankāra. So too at times they speak of three internal-senses, at times of only one. As to the contradiction with the Śruti teaching the Lord as the First Cause, and with the Smṛiti that follows in its wake, that is quite patent. For this reason likewise the theory of the

Sāṁkhyas is incoherent. To this a rejoinder : But is not the theory of those who claim to follow the Upanishads equally incoherent inasmuch as they do not assume a class-distinction between what is oppressed (lit. heated) and what oppresses (heats) ? To explain, those who maintain the hypothesis that the Brahman, alone and the inner-self of all, is the cause of all this phenomenal-existence, must assume that the oppressed and the oppressor are specific-forms of one and the same Ātman, and not entities belonging to different classes. And if the oppressed and the oppressors are to be specific-forms (or attributes) of one and the same Ātman, he can never divest himself of these forms, namely, the oppressed and the oppressor, so that the Śāstra, prescribing right knowledge for the subdual of all suffering, loses all sense. For surely, a bright-lamp, possessing the attributes of heat and light, cannot—as long as it retains its essence—[Page 52] be ever imagined as divested of those two attributes. And then, as to the analogy of the water, waves, ripples, foam, and the like that was adduced [II. i. 13 ¹⁵⁻¹⁹], there too the mass of water conceived as a unitary entity possesses the waves etc., in their alternating manifest and non-manifest forms as its attributes alike permanent, so that in that [illustration] too, water as an essence remains for ever incapable of being divested of [the attributes of] the waves and the rest. That the oppressed and the oppressor must belong to different classes is in fact quite well-known in the world. For, we always notice that the seeker and the object sought for are distinct from each other. If the object sought for were indeed to be not different from the seeker himself, then inasmuch as the object-sought-for—with reference to which a given person is to be the seeker—must be, for that seeker, ever permanently-present, he will not at all be a seeker with reference to it. Just as, analogously, a bright-lamp, the essence of which is light, possesses the object called light permanently present within itself, and so the lamp in question will never have to be a seeker of that light, seeing that it is with reference to an object that is yet to be attained that a seeker would ever care to seek. So too, the object sought for will cease to be an object of search. For if it were to be an object of search it can only search itself. And that can never be ; because the seeker and the object sought for are relative terms, and a relation can subsist only

between two related objects and never in one and the same object. Consequently, the object-sought-for and the seeker must be distinct from one another. So also the object averted and the averter. What is agreeable to the seeker is to him an object to be sought for; what is disagreeable, an object to be averted. The one individual is coming alternately into relation with these two. Now what is to be sought for being very little and what is to be averted very great, both the one and the other can indifferently be styled objects to be averted; and [the totality of] these, [as constituting the Samsāra], is designated the oppressor. And the one oppressed is the one Purusha who is alternately coming into relations with those two. This being the case, if the oppressed and the oppressor were to constitute only one essence, there would be the impossibility of any liberation. When on the contrary they constitute two distinct classes, then, by the avoidance of that which might cause their conjunction, liberation can be, some day or the other, deemed attainable.

To all this we say, Nay. It is because of this very oneness that the relation of the oppressed and the oppressor cannot be possible in the case. The defect pointed out might hold if, even while constituting a unity of essence, the oppressed and the oppressor were to come into relation with each other as the [oppressed] object and the [oppressing] subject. But this cannot be; and for the very reason that they constitute unity. For, the fire, surely, being a unity all by itself, cannot burn or illumine itself, even while granting that it possesses the distinctive attributes of heat and light and is also capable of assuming modifications. Is it then at all conceivable that the one absolutely-immutable Brahman can be susceptible to the relation of the oppressed and the oppressor? — Where then, as a matter of fact, does this relation of the oppressed and the oppressor subsist? — We reply, don't you see that it is the living body, upon which the action [of being scorched] takes place, that is the oppressed, while the sun is the oppressor? But [objects our opponent] oppression is a kind of pain, and that can belong to some sentient entity, and not to the non-sentient body. For, if the oppression were to be endurable by the body alone, with the body's destruction [at death] there would be an effortless end to that, so that one might not have to long for any [other] means for the destruction of the

same. To this we reply as follows.—We do not observe that, in the absence of the body, the sentient, alone and by himself, undergoes the oppression. For, surely, you also do not ascribe—in the absence of the body—any modification in the form of suffering to the merely sentient [Purusha]. Nor do you as-much as admit any [vital] connection between the body and the sentient, lest there might ensue [the Purusha's] impurity and other drawbacks. Nor, forsooth, do you allow oppression itself to be oppressed. How then is it possible even for you to explain the relation of the oppressed and the oppressor? If you were to reply that it is the Sattva [aspect] which is the oppressed, and it is the Rajas which is the oppressor, we say, No; because the sentient cannot possibly be deemed as coming into any vital-relation with these two aspects. If the sentient be asserted to be [Page 53] *as it were* undergoing the oppression, because he [for the time] accepts the lead of the Sattva, that implies—inasmuch as you use the words 'as it were'—that as a matter of fact the sentient does *not* undergo the oppression. If he really does not do so, the use of the words 'as it were' involves no defect. For, in virtue of the mere assertion that "the amphisbāna is like the serpent," the amphisbāna does not prove venomous; nor by reason of the assertion that "the serpent is like the amphisbāna" does the serpent lose its venom. Hence then it has to be assumed that this relation of the oppressed and the oppressor is an effect of nescience: it does not exist from the point of view of highest truth. And if this be the case, no deficiency of any kind can be urged against my own position. — But if you were to assume that the oppression has, as a matter of absolute reality, to be undergone by the sentient, then in that case it is under your system that there would ensue an utter impossibility of liberation. [especially] since you regard the oppressor [Pradhāna] as an eternal entity. To this it may be perhaps replied that, although the oppressed [Purusha] and the oppressing power [Pradhāna] be assumed to be permanent entities, yet inasmuch as the oppression requires for its happening a connection [between the two entities], which can result only from [a specific] cause, liberation for eternity can still be possible when the connection in question comes to be absolutely terminated, this last coming to pass when non-discrimination [between the Pradhāna and the Purusha], which is the cause of the

connection referred to, has been done away with. But we demur: because the specific cause assumed in the case, namely non-discrimination, is nothing but the guṇa called Tamas, and that too is assumed by you to be eternal. Further, there being no fixed rules as to when any given guṇa is to be dominant or subservient, no definite anticipation can be made as to when the cause of that connection would cease to be operative, and hence it would be equally uncertain as to when there would [possibly] result a disjunction [between the two]: so that it will be upon the Sāṅkhya himself that an impossibility of liberation will be inevitably forced. As to the follower of the Upanishadic doctrine, as he assumes that the Ātman is all alone, that Ātman cannot be at all liable to the relation of the subject or the object [of oppression]: and in the light of the Scriptural declaration to the effect that all phenomenal variety is merely word-initiated there cannot ensue, even in dream, any doubt as to an absence of liberation in his theory. From the point of view of phenomenal reality, however, the relation between the oppressed and the oppressor must be assumed to exist just there where, and just in the very manner in which, it is observed to exist. There can be no objection taken to it, nor any refutation offered of it. 10. Here ends the Topic (1) called the Refutation of the Sāṅkhyas.

TOPIC 2 : GROSS-LONG ANALOGY

(*Sūtra* 11)

The theory which recognised Pradhāna as the cause has been refuted. Now it is the theory recognising atoms as the cause that has to be refuted. To begin with, however, there is an objection raised by the Atomist- against the Brahman-theory which we will set at rest. — Now, this is what the Vaiśeṣikas assume. Qualities inherent in the cause-substance originate in the effect-substance other qualities of the same nature, as follows from the fact that from white threads we observe a white piece-of-cloth to originate, and we never observe its contrary occurrence. Therefore, in case the sentient Brahman is to be assumed as the cause of the world, the [quality of] sentiency ought to be, likewise, inherent in the world, the effect. But inasmuch as we do not find that to be the case, it is not reasonable that the sentient

Brahman should be the cause of the world. Now this presumption of theirs he is causing to run counter to their own basic theoretical position.—

Or, it may be on the analogy of the 'gross' and the 'long' as [effects originating] from the 'short' and the 'infinitesimally-spherical.' 11.

This is their theory. — The atoms, we are told, having ceased for a while [i. e., during world-dissolution] to originate effects, remain possessed of the qualities of colour etc., appropriate [to each class of atoms], and of their infinitesimally-spherical dimension. Subsequently, these atoms, being heralded by the "Unseen-principle" and helped on by mutual conjunctions and the like, give rise to all the varied assemblage of effects in an orderly-sequence, commencing with the binary-compound, [Page 54] — the qualities of the cause originating [invariably] other [accordant] qualities in the effect. When [for instance] two atoms originate the binary, then it is the special qualities of colour and the like residing in the atoms, say the white colour, that originate in the binary another white colour [and the other remaining qualities]. The distinctive quality belonging to the atoms, however, *viz.*, infinitesimal-sphericity, does not originate in the binary another infinitesimal-sphericity, since they assume that the binary has another dimension of its own. For, they tell us, minuteness and shortness are the [two] dimensions that belong to the binary. — When, furthermore, two binaries give rise to the quaternary-compound, then too, similarly, the qualities of whiteness and the like inherent in the binaries reproduce themselves [in the quaternary], while the minuteness and the shortness, even though inherent in the binaries, do not reproduce themselves inasmuch as they assume that the quaternary is endowed with grossness and length as its [special] dimensions. — So too, when a number of atoms, or a number of binaries, or a binary plus an atom, originate an effect, we have to understand a similar process of happenings.

Now then, just as from out of the atom possessing infinitesimal-sphericity there arises a binary which is minute and short, or there arises a gross and long tertiary and other atom-com-

pounds, but there is no reproduction of the infinitesimal-sphericity; or again, just as from the binary, which is minute and short, there arises a gross and long tertiary, but there is no reproduction of what is minute or short: even so, what do you lose if we make the assumption that from the sentient Brahman there can originate the non-sentient world? — And were you to urge that you assume that it is because the binary and the other effect-substances are under the incubus of another dimension [quality], therefore it is that the infinitesimal-sphericity and the other dimensions appertaining to the [atoms and other] causes do not reproduce themselves; whereas as regards the world, it is not under the incubus of some assignable quality opposed in nature to sentiency, by reason whereof the sentiency belonging to [Brahman] the cause could not give rise to a similar sentiency in the [effect, the] world. For, surely, non-sentiency is not some [positive] quality of a nature opposed to sentiency: it is merely the negation of sentiency. Consequently, inasmuch as there is a distinction between the case of infinitesimal-sphericity and that of sentiency, it is necessary that the sentiency should reproduce itself [in its effects]. Do not think so [we reply]. For, the two cases are partially analogous in so far at least as concerns the fact that infinitesimal-sphericity and the other qualities, even though present in the cause, do not reproduce themselves; and so likewise [may not] the sentiency. Nor can it be really the case [as maintained] that it is the fact of [the effect-substance] being under the incubus of another dimension that acts as the cause deterring infinitesimal-sphericity and the other qualities from producing their effect, because the infinitesimal-sphericity and the rest may legitimately find a scope for their productive-operation during the time that the new dimensions are yet to be; for, it is your own assumption that the effect-substance, although brought into existence, remains, for the space of just a moment and prior to the origination of the [new] qualities, without any qualities at all. Nor is it open to you to urge that the infinitesimal-sphericity and the rest are engrossed in the production of the other [new] dimensions, and that therefore they are unable to originate a dimension similar to themselves [in the effect-substances], because your own theory assigns other cause for the origination of the new dimensions. "From plurality of causes, from grossness of the causes, and from the loose-texture [of the

components]. grossness originates"—“Minuteness is the reverse of that”—“Hereby grossness and shortness are explained.”—**[Page 55]** So run the aphorisms of Kaṇāda [VII. i. 9, 10, 17]. Nor [finally] can it be contended that it is because the plurality and other [qualities, mentioned in aphorism VII. i. 9 as inhering in the] causes, happen to be placed, in some way or the other, in a specially favourable contiguity [with reference to the effect substance], therefore it is that these alone, and not the sphericity etc., are able to produce their effects: because, whenever a new substance or a new quality is to be generated, all the qualities of the effect whatsoever are without distinction equally inherent in their substrate, viz., the [cause-]substance. Hence it follows that infinitesimal-sphericity and the rest do not originate because it is their nature not to do so. So must it be understood even in the case of sentiency.

Furthermore, in assuming [qualities like] conjunction to produce disparate effects like substances and the rest, there has already happened [in your own system] a departure from the rule of class-homogeneity [between causes and effects]. And if to this it be objected that a quality [like conjunction] cannot be a proper instance to be adduced with reference to a substance [like Brahman], the subject under discussion, we demur because what the instance seeks to convey is no more than the [possibility of] a disparate origination. Nor is there any sense in laying down the rule that substance should form the instance when substance is under discussion, or a quality alone when a quality is under discussion. Even the author of your own Sūtras has instanced a quality with reference to a substance, as in the aphorism [IV. ii. 2] —“Because the conjunction of the visible and the non-visible is non-visible, therefore [the body] has not five-fold constituency.” Just as the [quality of] conjunction, inhering on the one hand in the earth which is visible, and on the other, in the ether which is non-visible, is non-visible, so also would the [substance] body [as a whole], inhering in [its supposed constituent parts,] the five elements, some visible and others non-visible, become non-visible; whereas the body *is* visible. Hence it cannot be constituted out of five elements. The point being that conjunction [which is the instance cited] is a quality, whereas the body [with reference to which the illus-

tration is adduced] is a substance.—In the aphorism [II. i. 6]—“ But we do see it ” there was given an exposition of [the possibility of] disparate-origination. If so, is not the present discussion redundant after that exposition ? No, we reply. That was an answer to the Sāṃkhya, while this is to the Vaiśeṣikas. But have you not also made an extension of the same argument on the ground of analogy in the aphorism [II. i. 12]—“ Hereby are also explained away theories reprobated by men-of-position-and-competence ? ” That is true. But here, in the present case, by adducing examples adaptable to their own theory, we have merely offered, inasmuch as we are about to commence a discussion of the Vaiśeṣika system, a further exposition of the same. 11. Here ends the Topic (2) entitled the Gross-Long Analogy.

Topic 3 : REFUTATION OF THE ATOMIC THEORY.

(Sūtras 12-17)

Both ways no activity (is possible), hence an absence of that. 12.

Now he is going to refute the theory which regards the atoms as the world-cause. This is how their theory is set forth. We observe in the world substances like pieces of cloth, which are wholes made out of parts, originating from various substances like the threads, which operate by the help of [the quality called] conjunction, and which [as avayavas or parts] invariably inhere [in the piece of cloth, the avayavin or the whole]. Generalising from such individual instances we infer that whatever is possessed of parts, that must always originate from certain specific substances which operate by the help of conjunction, and which always inhere in the resulting avayavin itself. And that wherein this process of dividing and sub-dividing a given whole into small and smaller parts comes to an end, that is the atom the utmost limit of subdivision. [Page 56] Now, all this world beginning with mountains, oceans, etc. constitutes a whole made of parts; and being with parts, it also possesses a beginning and an end. And inasmuch as no effect can exist without [assignable] cause, therefore the Atoms are the cause of the whole world: that is the view of Kapāda. Finding, accordingly, that these four elements—known as the earth, the water, the

light, and the wind—are entities possessing parts, they imagine four kinds of Atoms to correspond. And as these [elements] reach [therein] the very limit of their sub-division, there being no further possibility of their division into yet smaller parts, when the earth and the other elements begin to be destroyed [by falling off into smaller and smaller parts] that division goes down as far as the atoms [and no farther]; and [when that happens] that is what is known as the state of World-dissolution. Sub-sequently, at the time of Creation, there originates in wind-atoms a motion depending upon the Unseen-principle. That motion causes the atom in which it inheres to collide with another atom, and then, in the sequence of the binaries and the rest, [the element] Wind is generated. In the same way is generated Fire, the same way, the Waters, and the same way, the Earth. In a like manner too the body along with its sense-organs; so that in this fashion the whole world is born out of the Atoms. And from the colour etc. inhering in the Atoms proceed the colour etc. inhering in the binaries and the other products on the analogy of what happens in the case of the threads and the piece of cloth. Thus think the followers of Kaṇāda.

With reference to this theory we have to urge the following. The conjunction that is to take place between the atoms that are [at world dissolution] in a state of disjunction must be assumed to be due to movement, because we observe that the threads etc., only when being moved, give rise to the conjunctions [resulting into the piece of cloth and the like]. Now this movement, being an effect, there has to be assumed some cause for it. If none such is assumed, there being an [utter] absence of cause, there would not ever be produced in the atoms the initiatory motion [that is to lead to world-creation]. Now if a cause is to be assumed, whether it be an effort or an impact, or some cause invisibly operating to produce the movement, [in every case] it being impossible [of operation], there cannot at all arise that initiatory motion in the atoms. For, there cannot possibly exist in that state the effort, which is a quality belonging to the soul, because the soul is yet to be endowed with a body. And it is well-known that it is only when there is a mind located within a body that effort, which is a quality of the soul, can arise after the

soul is conjoined with the mind. For a like reason also the impact and the other visible causes have to be ruled out. For, all these can become operative only in a period subsequent to conjunctions [giving rise to world-creation]: They can not possibly be a cause for the initiatory movement. In the next place, if the Unseen-principle were to be asserted as the cause of the initiatory movement, that principle could either be inherent in the soul or in the atoms. In both ways it is not possible that there can arise in the atoms a movement caused by the Unseen-principle; because the Unseen-principle by itself is non-sentient. For surely, nothing that is non-sentient and not controlled by the sentient can spontaneously move or cause movement in others—as was declared in connection with the Sāṃkhya theory. And as to the soul, he, in that [pralaya] condition, is non-sentient inasmuch as sentiency is yet to arise in him. Besides, being regarded as inhering in the soul, the Unseen-principle cannot be the cause of a motion in atoms; for with the latter it is not in relation. And if it be contended that there can well be a relation between the [omnipresent] Purusha (Soul) in whom the Unseen-principle inheres and the atoms, then in that case, that relation being always present, there would arise the contingency of the productive-movement in question being ever continuous, seeing that there exists nothing else to regulate it. So then, as there does not exist any definite-and-regularising cause of the movement, there cannot arise the initiatory movement in the atoms. And the movement not being present, the conjunction which is to depend upon it cannot happen either. And failing the conjunction, the series of effects beginning with the binaries, which depends upon that [conjunction] cannot originate.—And [assuming that the conjunction between atoms does somehow take place] the conjunction of one atom with another atom [Page 57] can happen either by total-interpenetration or else by partial-contact. If by total-interpenetration, there cannot ensue any increase in volume, so that [even after atoms join with atoms] the resulting magnitude would be just an atom—an eventuality that plainly contradicts what is observed. Because, what is normally observed is a conjunction between a substance having spatial-extension with another substance having [similar] spatial-extension. If, secondly, it is by partial-contact, that would make the atom capable of division into parts. And if it

were to be argued that the atoms might be assigned an imaginary extension in space, then, things imagined being always unreal, the conjunction in question would also be unreal, and such [unreal] conjunction cannot possibly be the non-inherent [or operative] cause of the effect which, however, is a reality. And when the operative-cause is absent there cannot originate the binaries and the rest which make up the substance [in the creation]. — Furthermore, just as at the very beginning of Creation, there being no inducing-cause, there cannot originate that movement of the atoms which is to bring about their conjunction, even so, at the great Dissolution, there cannot possibly originate in the atoms that movement which is to bring about their disjunction. For, even in this case, there is not any definite and-regularising cause that is perceptible. And as to the Unseen-principle, that is [to be appealed to] for establishing the possibility of [pleasure-pain] experience and not of Dissolution. Consequently, there being no [possibility of] conjunction or disjunction, there would ensue the contingency of an absence of Creation and Dissolution, which depend upon them. For this reason, too, this theory which makes the atoms the cause does not stand to reason. 12.

Also in consequence of the hypothesis [of the relation] of Inherence, because there results, owing to parity of reasoning, a *regressus in infinitum*. 13.

And also in consequence of the hypothesis of the relation of Inherence— “ there is an absence of that ” — this is what has to be supplied, because a refutation of the atomic theory is the point at issue. The binary-compound, originating from two atoms, is absolutely distinct from the two atoms and is yet related to them by the relation of Inherence : that is your assumption. With this assumption it cannot at all be possible for you to substantiate the theory of atomic causation. Why ? “ Because there results, owing to parity of reasoning, a *regressus in infinitum*. ” Just as the binary-compound, being absolutely distinct from the [component] atoms, is yet [assumed to be] related to them by the relation of Inherence, even so the relation of Inherence itself, being absolutely distinct from the two objects between which it is to subsist, will require to be

brought into relation with the objects wherein it inheres by means of another distinct relation precisely of the nature of Inherence; because, absolute distinction [which is the determinant motive] is equally present in both cases. And conceding this, we will have to imagine a new and yet newer relation [of Inherence] for each of the relations of Inherence successively postulated, so that there does ensue the clear contingency of a *regressus in infinitum*. — But, it will be urged, Inherence is a relation that can be vividly cognised as present here and before us, and it therefore is apprehended as being in permanent relation with objects wherein it inheres: it is never perceived as something unrelated and standing in need of a distinct act of relation; and, as a consequence of this, there cannot at all arise any further necessity of imagining a succession of possible relations with reference to each of them, thereby creating the contingency of a *regressus in infinitum*. We reply in the negative. For, in that case, the relation of Conjunction also is no less in permanent relation with the conjoint objects, so that it too should not have needed—any more than Inherence—another distinct relation. For, if Conjunction is to stand in need of a distinct relation (*viz.* Inherence) because it is a different entity from the conjoint-objects, then in that case, Inherence also ought to stand in need of a distinct relation, because it too is none the less a distinct object. Nor will it do to contend that Conjunction, being a quality, may reasonably require a distinct relation, but not the Inherence, because it is [a distinct category] and not a quality; because the circumstances necessitating a distinct act of relating are equally present in both cases; and as to the technicality making one [the Conjunction] a quality [and another a distinct-category] that is of no consequence [or, is not a universal technicality]. Therefore, [Page 5t] if you are going to assume that the relation of Inherence is a distinct category, the *regressus in infinitum* is sure to face you as a contingency. And the contingency of the *regressus* being once driven home, with the untenability of any one member of the series, everything will become unsettled, so that there can never arise a binary-compound as an effect of two atoms. Hence too the theory which puts forth Atoms as the cause is lacking in cogency. 13.

And because [there will ensue the contingency] of [its] unceasing continuance. 14.

Besides, the atoms will have to be assumed to possess by nature either a tendency towards activity, or a tendency towards non-activity, or both the tendencies, or neither of the two,—there remaining no other possible alternative. None of these four alternatives can possibly be made to stand. If they were to possess a natural tendency to activity, then they would ever continue to be active, and there would ensue the contingency of an impossibility of the Dissolution. Again, if they were to possess a natural tendency to non-activity, they would ever continue to remain non-active, and there would ensue the contingency of an impossibility of Creation. As to their possessing both the natures, that is self-contradictory, and so impossible to maintain. If they, finally, were to possess neither of these tendencies by nature, then the activity or the non-activity will have to be assumed as due to specific inducing-causes ; and as regards these causes, if they are to be like the Unseen-principle, they will always be close at hand, and so there will ensue the contingency of a continuous activity. And if the Unseen-principle and the like were not to be essentially needed, (or be not acceptable to the System, there would ensue the contingency of a continuous non-activity. For this reason too the theory of atomic causation is untenable. 14.

Also, because they possess colour and the like [qualities], there will take place a reversal of their [assumed] nature, because so it is observed. 15.

The Vaiśeṣhikas put forward the hypothesis that, in the course of the successive disintegration into smaller parts of substances which are compounded out of parts, the stage at which no further division into parts can be effected are the atoms, which are eternal substances and which fall into the four classes, each possessing colour and the other qualities ; and that they originate the elements and the elemental products each possessing colour and the other [conforming] qualities. This hypothesis of theirs cannot be substantiated because, possessing as they do the colour and the other qualities, there would result the contingency of a reversal of the

atoms' nature as atoms and as permanent substances; in other words, there will have to be ascribed to them grossness and non-permanence as compared with the ultimate first cause—whatever that may be—qualities just the opposites of what are [by you] sought to be established. Why? Because it is so observed in the world. For in this world, whenever a thing is possessed of colour and the other qualities, that thing is observed to be, in comparison with its own cause, gross and non-permanent. For example, the piece of cloth is gross and non-permanent as compared with the threads [out of which it is manufactured], and the threads are gross and not permanent as compared with their [constituent] fibres. On the very same analogy, inasmuch as these atoms are assumed by them to possess the qualities of colour and the like, they must also have other substances as cause, in comparison with which the atoms will have to be assumed as gross and non-permanent. And as to the proof they adduce for the permanence, namely [Vaiśeṣhika Aphorism, IV. i. 1]—"Whatever, having existence, has no assignable cause, that is permanent"—the characterisation in question cannot, under the circumstances, apply to the atoms, because in the manner just detailed, even the atoms will have to be maintained as possessing a cause. Next, as to the second ground establishing permanence that has been adduced, [Page 59] namely [Vaiś. Aphorism, IV. i. 4]—"There might otherwise be an impossibility of the specific negation in the form of "this is not permanent"—that does not necessarily establish the permanence of the atoms. For, had there been no permanent entity whatsoever, then of course there could not have happened the negative-compound with the permanent (*i. e.*, non-permanent); but the compound does not demand that the atoms alone should be the permanent entity in question. As a permanent entity [required for the exigencies of the compound] we can point to our Brahman which is the ultimate First Cause. Nor finally, can the existence of an object be established merely on the ground of the usage of words : it is entities established by other independent proofs that come to have words employed for them in ordinary parlance. Lastly, with reference to the third proof for permanence that is adduced, namely [Vaiś. Aphorism, IV. i. 5.]—"And absence of knowledge"—if the interpretation of the Aphorism is, that "absence of knowledge" means non-apprehension by direct-cognition of any

causes in the case of [the atoms, which are] existent-entities, and the effects of which are perceptible to sense, then the binary-compounds [which answer to the above description] will also have to be pronounced as permanent. And if you modify the statement by introducing the qualification—"provided there be no other substance [as their originating cause]"—then in that case the ground of permanence assigned will be tantamount to just, "not having a cause." This being already adduced before [in Vaiś. Aphorism, IV. i. 1], the present Aphorism [IV. i. 1] "And absence of knowledge" will be a mere repetition. Secondly, if "absence of knowledge" is to signify the impossibility of any third cause of destruction besides the two, viz., disintegration of the constituent causes or destruction of constituent-causes, and if it is explained that the "avidyā" so interpreted establishes the permanence of the atoms, we reply that there does not at all exist any invariable rule that a thing that is going to be destroyed must agree to be destroyed only in the above two modes. That might be the case only if it be assumed [as do the Vaiśeshikas] that a plurality of substances joined by conjunction can alone originate other substances. When however the assumption is [as of the Sāṃkhyas] that a cause possessing a generic nature freed from particularities can originate effect when it assumes that other state in which the particularities become manifest, then a destruction can properly be assumed to take place even when there results, as in the case of ghee, a destruction of its specific corporeality by the dissolution of its solidity. Thus, therefore, because the atoms are assumed to be endowed with colour and the other qualities, there will be a reversal of the nature intended to be ascribed to them. For this reason also the theory of atomic causation falls to the ground. 15.

And there is difficulty either way. 16.

Earth is gross and possesses the qualities of odour, taste, colour, and touch ; waters are subtle and have the qualities of colour, taste, and touch ; light is more subtle and is endowed with the qualities of colour and touch ; while wind is the most subtle and has [only] touch as its quality : in this fashion these four elements are assigned increasing or decreasing

number of qualities and are observed, in the ordinary world, to constitute a graded-series according as they are gross, or subtle, or subtler, or subtlest. So too, we ask, are we to conceive of the atoms [of these respective elements] as possessing the increasing or the decreasing number of qualities? In either alternative there does ensue the liability to encounter an unavoidable difficulty. For, if, as one alternative, we imagine that the atoms possess an increasing or a decreasing number of qualities, the atoms to which increasing number of qualities are attributed will exhibit a growth of bulk, and so there will follow the contingency of their being no longer atomic. [Page 60] And you do not surely argue that an increase in the number of qualities takes place even in the absence of a growth in bulk, seeing that in the case of the elements which are the products [of the atoms] we observe that with an increase in the number of qualities a growth in bulk follows. If, as the other alternative, an increase in the number of qualities be not ascribed, then, in order to establish the atomic character of all [the four elemental-atoms] alike, if they are all supposed to possess each merely one quality [distinctive of each element], then we would be unable to find touch in light [which will have only colour]; or to find colour and touch in water [which will have only taste]; or to find taste and colour and touch in earth [which will have only odour]; inasmuch as the qualities of the effect [e.g., the elements] have the qualities of the causes [e.g., the elemental-atoms] as their antecedents. If, however, all are assumed to possess [all] the four qualities, then we would find odour even in waters; odour and taste even in light; odour, taste and colour even in wind: a fact which we never observe. For this reason too the theory of atomic causation cannot be sustained. 16.

And being reprobated, [the atomic theory] is to be absolutely discredited. 17.

The [Sāṅkhya] theory of the Pradhāna has been put forward even by a few [sages] like Manu who profess Vedic knowledge, in the belief that it will substantiate certain dogmas like that of the antecedent existence of effect [which is acceptable to followers of the Veda]. But the present atomic theory has not been adhered to in any part of its dogmas by any men-of-com-

petence-and-position, and so it deserves to be altogether discredited by those who claim to follow the Veda. — Moreover, the Vaiśeṣhikas posit, as constituting the main topics of their system, the existence of six categories—denominated as Substance, Quality, Action, Generality, Particularity, and Inherence—absolutely distinct from each other and having—each of them—its own absolutely distinctive characteristics, as do for instance, a man or a horse or a hare. And having made this assumption, they further make the assumption—altogether contrary [to the one already made]— namely, that the Quality and the other categories are dependent upon [the first category of] Substance. This does not stand to reason. Why ? Just as, in our ordinary experience of the world, objects like hare, kuśa-grass, palāśa-tree etc.—being absolutely distinct from each other—are never found to be dependent upon each other, even so, and for the very reason that Substance and the other categories are absolutely distinct from each other, Quality and the rest cannot possibly be dependent upon Substance. But if Quality and the rest are to be, in fact, dependent upon Substance, then, because when the Substance exists then only these exist, and when the Substance does not exist they also do not exist, therefore it is reasonable to believe that it is the one Substance itself that becomes, owing to a difference in posture etc., liable to be described by the different terms and ideas, quite on the analogy of the one Devadatta, who, although no more than one, becomes, through being placed in different conditions, liable to have different terms and ideas predicated of him. If this be granted then there would result the [unwelcome] acceptance of the Sāṃkhya dogma and the running counter to one's own accepted thesis.— But, it may be rejoined—do we not see that the smoke, albeit distinct from the fire, is seen to be dependent upon the latter ? Certainly it is so. But in this case, because smoke is known to be distinct from fire, therefore we conclude that the two must be distinct. In the present case, however, in the judgments such as—' white blanket,' ' ruddy cow,' or ' blue lotus '— what we actually cognise is the one thing— Substance—that appears under these varied attributes [or aspects], so that there never exists in the case of the Substance and its Qualities a knowledge of their distinctness, as it does in the case of the fire and the smoke. Hence the Quality must be held to constitute

the very essence of the substance. And by the same mode of reasoning can be established the fact of Action, Generality, Particularity, and Inherence constituting likewise the very essence of the Substance. — And if in this connection it were to be urged that the fact of the dependence of the Quality and the rest upon the Substance is due to Substance and Quality being "entities proved incapable of separated-existence," then in that case we demand, does this "non-separated existence" mean [Page 61] non-distinctness in space, or non-distinctness in time, or non-distinctness in nature? None of these alternatives can stand ground. If, to begin with, it were to denote non-distinctness in space, then it would run counter to your own assumption. How? For, you maintain that a piece of cloth originating from threads occupies the same space as the threads themselves, and not a new space to be occupied by the piece of cloth; and yet you believe that the qualities of the piece of cloth—whiteness and the rest—occupy the same space as the piece of cloth and not the same space as the threads. And in this connection it has been said [Vaiśeshika Aphorism, I. i. 10]—"It is the Substances that originate other Substances, while it is Qualities that originate other Qualities." The position held is that it is the threads—the cause-substances—that originate the effect-substance, namely the piece of cloth, while it is whiteness and the other qualities belonging to the threads that originate, in the piece-of-cloth—the effect-substance—other [new and similar] qualities, like whiteness and the rest. This assumption of theirs would be thrown overboard if the Substance and the Qualities were to be assumed, as you want to do now, to exist in non-distinct (i. e. self-same) space. — If [as a second alternative] the "non-separated existence" be asserted to mean non-distinctness in time, then the right and the left horns of the bull will have to be conceded to possess non-separated existence. And if, finally, "non-separated existence" were to denote non-distinctness in nature, then there is no possibility of the Substance and the Qualities possessing any distinctness of essence inasmuch as they are always experienced as being of identical essence. — And as to their dogma to the effect that Conjunction is a relation between two things known to be capable of separated-existence, whereas Inherence is a relation between two things of established non-separated existence—this assumption is rendered quite nugatory

inasmuch as that relation of non-separated existence cannot cogently be predicated of the cause [the threads], which can exist as a distinct entity [long] prior to the effect. And if [to avoid this difficulty] the assumption in question were to be understood as referring to only one of the terms to the relation [i. e., the effect] so that Inherence is taken to denote the relation with the cause of the effect [the piece of cloth], which is never ascertained to have an existence separated [from the threads], even so the effect which was antecedently non-existing, cannot surely be held to be related to the cause unless and until it acquires the character of an existential entity; because relation always requires two [positive] terms between which it is to subsist. And if you were to say that the effect does first acquire the character of an existential entity, and then comes into relation, then inasmuch as you attribute to the effect an existential character prior to its coming into relation with the cause, the hypothesis of the effect not possessing any separated existence by itself falls to the ground, and the statement [Vaiś. Aphorism, VII. ii. 13] — “There exists no possibility of conjunction or disjunction between effect and its cause” becomes an erroneous statement. Moreover, just as you assume that the relation between, on the one hand, the effect substance at the very first moment of its existence when it has no [quality or] activity, and on the other, all-pervading substances like Ether [which, being all-pervading, are incapable of activity] to be Conjunction itself [although, in strict theory, Conjunction requires activity on the part of at least one of the objects conjoined], and not Inherence: even so the relation of [that same effect-substance] to the cause-substance should be understood to be just Conjunction itself, and not Inherence.

Nor does there exist any valid-proof for ascribing to the relation of Conjunction or Inherence an existential character independently of the two objects which come to be joined by that relation. If you maintain that they must be regarded as existential entities, because we find the term Conjunction and Inherence and the ideas denoted by them as current [in the world] over and above the terms and the ideas belonging to the two objects brought together by these relations, we say, No; for even where the object is one, we observe the use of many terms and

ideas with reference to the object according to its intrinsic and extrinsic predications. For instance, we find in the world one and the same Devadatta made the object of the use of many terms and ideas with reference to him, according as his own intrinsic nature and his extrinsic relations are taken into consideration: thus we call him a man, a Brahman, learned-in-Veda, affable, a boy, a youth and an old-man; as also a father, a son, a grandson, a brother, a son-in-law, etc. Thus too we make one and the same line, with reference to the different places where it may happen to be inserted, the object of the use of many terms and ideas like one, or ten, or hundred, [Page 62] or a thousand etc. Analogously it is the two objects that are brought together by a given relation that can themselves with property be the objects of the use of the terms and ideas of Conjunction and Inherence, besides being the objects of the use of the terms and ideas which belong to them as objects brought together by these relations; and they are *not* [the objects of the use of the terms and ideas of Conjunction and Inherence] *because* a distinct entity corresponding to these [relations] does actually exist [as a Padārtha]. Accordingly, by the proof of the "Non-perception" of an object which ought to have come [if it at all existed] under the range of perception, we conclude the non-existence of a distinct object [corresponding to the terms Conjunction and Inherence]. Nor can it be urged that the terms and ideas belonging to these relations, if assumed to refer only to the objects brought together by the relations, will have to be always predicable [of them because the objects always persist]: this has been already replied to [by explaining that objects can have different terms and ideas used with reference to them] according as the intrinsic or the extrinsic form of the objects is under reference. Then again, Conjunction is not possible in the case of atoms, and the self, and the mind, because, they are not divisible in space, seeing that Conjunction is everywhere seen to exist between a substance divisible in space and another substance similarly divisible in space. And if it be asserted that such divisibility in space can be imaginarily attributed to the atoms, the self and the mind, we say No; for, if one were free thus to imagine things that do not exist, there would result the contingency of all one's ideas being accomplished. That one ought to imagine, only upto such and such a limit, an object,

be it possible or impossible, that does not exist, and not beyond that limit—for imposing such a restriction no grounds of any kind exist. For, imagination depends solely upon one's will, and one can command any quantity of it. So that no restrictive ground can exist for not imagining, beyond the six categories imagined by the Vaiśeṣhikas, other additional categories, be they a hundred or a thousand. The result would be that any individual can establish anything whatever that might catch his fancy. Here we would have a benevolent man who might imagine that there should not exist any more this Saṃ-āra which brings such voluminous suffering on mortals. There we would have another malevolent person who would even imagine that the liberated souls too might be born again. Who can have the right to come in the way of such men ?

Here is another argument. A binary, which is a whole constituted out of parts, cannot reasonably be supposed to have any cohesion with the two impartite atoms [which are its constituents] any more than it can have that cohesion with Ether [which is also impartite]. For, it is admitted that [impartite substances like] Ether cannot possess cohesion with Earth and the like in the same fashion as there subsists such a cohesion between the wood and the lac juice (within it). — If however, it be argued that Inherence has got to be necessarily presupposed because, in its absence, we cannot otherwise explain the relation of dependence and substratum that obtains between the effect-substance and the cause-substance, we demur; because the argument involves [the deficiency of] mutual interdependence. For, it is only when the distinctness between the effect and the cause is established, that the relation of dependence and substratum can be established; and it is only when the relation of dependence and substratum between the two is conceded that they can be assumed to be distinct. This would involve [the fault of] mutual interdependence as in [the familiar instance of] the pot and the Badara-tree. [Nor is this interdependence inevitable from the very nature of things, as in the case of the seeds and the tree; for,] the followers of the Vedānta doctrine have not to assume a distinctness between the effect and the cause, or any relation of dependence and substratum between them, because they have adopted the theory that the effect is

nothing more than a specific state-of-existence of the cause itself — Then again, inasmuch as the atoms are of a limited dimension, they must be assumed to possess delimiting parts in the direction of each of the six or eight or ten sides that one might imagine them to possess; and possessing these [delimiting] parts they must be assumed to be non-permanent, which involves the throwing overboard of the assumption of the eternal and impartite nature of the atoms. If to this it be replied: it is these very delimiting parts that you postulate as marking out the extension of the atom in each direction which are our [eternal and impartite] atoms, we say, No. For, [to consider the matter from a slightly different point of view] it stands to reason that—following the order of disintegration of the relatively gross into the relatively subtle—all things whatsoever, upto and including the [assumed] first cause [i. e., the atoms], should meet their destruction. Just as earth, although a real existing entity, and although more gross when compared with the binaries etc., does nevertheless perish; and then perishes the subtle and the more subtle mass-of-matter possessing the same generic characteristic as the earth; and thereafter the binary: even so, finally, must the atoms meet their destruction inasmuch as they also possess the same generic characteristic as the earth. And if you urge that although they might meet their destruction, [Page 63] that would be always by a process of disintegration into [smaller] parts, we reply that that is no argument against us. For, we have already said that destruction can cogently be supposed to take place on the analogy of the solid-form of the ghee. For just as, in the case of the ghee, the gold, and the like, there results, upon their coming into contact with fire, a destruction of their solidity and a reduction of them to a fluid state although there may not take place any disintegration of them into parts, even so there might result in the case of the atoms a destruction of their corporeality and the like, by their being re-fused back into their First Cause. In a like fashion, the origination of effects does not invariably take place by a mere [mechanical] joining together of constituent parts: for, we observe that from milk, water, and the like there do originate effects like curds, snow, and the rest, even in the absence of a joining together of constituent-parts. — So then, inasmuch as it is propped up by yet more flimsy ratiocinations, and because

it runs counter to the Scriptures that vouch for the existence of the Lord as the First Cause, and also for the reason that men-of-position-and-competence like Manu, and others like him who are [generally] disposed to follow the Scriptural teaching, have not expressed their acceptance of it, therefore this theory of atomic causation deserves to be altogether repudiated by persons who aspire for [spiritual] welfare. 17. Here ends the Topic (3) entitled Refutation of Atomic theory.

TOPIC 4 : REFUTATION OF AGGREGATES.

(*Sūtras* 18-27)

That the Vaiśeṣika theory deserves to be discarded inasmuch as it is full of fallacious reasonings, runs counter to the Veda, and is repudiated by men-of-position-and-competence, has been above declared by us already. That theory is semi-nihilistic, and so we are here going to argue that a completely nihilistic theory [of the Buddhists]—inasmuch as both agree in being nihilistic—deserves *a fortiori* to be reprobated. Now, this theory appears in many forms, either because of the differences in the [Teacher's] own understanding [at the various stages of his intellectual and spiritual advancement], or because of the different pupils [of varying powers that he had to deal with]. Amongst them stand out the following three disputants. Some of them maintain the reality of everything; others maintain the reality only of the ideas; while a third class maintains that everything is a void. Of these, those who maintain the reality of everything postulate two classes of entities: the external and the internal, viz., (i) the elements and the elementals, as also (ii) the mind and the mentals. It is these that we take up first for refutation. Now, the "elements" stand for the earth and other element-substances, while the "elementals" are the colour and other [qualities] as also the eye and other [sense-]. The four-fold atoms of earth and the rest are endowed with hard, adhesive, hot, and propulsive natures; and they think that these are (respectively) conglomerated into the earth and other [elements]. Likewise there are the five thought-phases (Skandhas) known as perceptions, conceptions, feelings, I-consciousness, and latent-impressions. And these also, in our psychic-experience, agglomerate into all that

variety of thought-entities which, they think, renders all our ordinary dealings possible. Against this we have to say—

In both the [physical and the psychic] aggregates proceeding along two [distinct lines-of-causation] there is an impossibility of that. 18.

Now, those aggregates of two kinds proceeding along two [distinct] lines-of-causation which our opponents wish to postulate ; viz. that springing from the atoms and consisting of the conglomerates of elements and elementals, and that springing from thought-phases and consisting of the five agglomerated thought-entities,—in postulating both these kinds of aggregates proceeding along two [distinct] lines-of-causation, there would result an impossibility of that : i. e. to say, there would ensue the inexplicability of the happening of the aggregation. Why ? Because the factors that are going to form the aggregates are themselves non-sentient ; and as to the flaring out of the [isolated thought-phases into the agglomerate known as the] mind, that is contingent upon the (prior) achievement of the aggregation. And also because you do not assume the existence of any other permanent sentient being—be he the experiencer, or the controller—that could bring about the conglomeration. And were you to assume a tendency-to-aggregate without any inducing-cause, [Page 64] there would ensue the contingency of the non-cessation of that activity [even at the Nirvāṇa]. And as regards the reflective-consciousness belonging to the self (āśaya)—[which is admitted to be a continuum]—it is impossible to make it out as either distinct or non-distinct [from the aggregate] ; and inasmuch as it is assumed to be a momentary phenomenon, it will be incapable of starting any operation, with the result that activity remains unexplained. And because of this, the aggregation remains unexplained, and with the aggregation remaining unexplained, all the mundane-existence depending upon that will come to an end altogether. 18.

And if it be said that [aggregation can take place] because of the [Twelve Root-causes or “ Nidānas ”] being related by mutual causation, we say No ; because thereby mere origination will [at the most] be effectuated [and not the aggregation]. 19.

Even though there be not assumed any permanent sentient being—whether as the experiencer or as the controller—that could bring about the conglomeration, still, the mundane existence can well be explained through [the concatenated chain of] nescience and the rest serving as the causes of one another. And when once an explanation is offered of the mundane existence, nothing further need be demanded. The nescience and the rest include—(1) nescience, (2) latent-disposition, (3) rebirth-consciousness, (4) name-and-form, (5) the sense-sextet, (6) contact, (7) feelings, (8) craving, (9) effort, (10) hereditary-momentum, (11) birth, and (12) decay-death-sorrow-lament-suffering-despair, and the like. These are causes of each other, and they are enumerated in the Buddhistic Canon sometimes in a condensed and sometimes in an expanded manner. This chain of nescience etc. cannot of course be demurred to by any theorists. So then, with this chain of nescience etc., with its members related as the cause and the effect unto each other [in the cyclic order], continuing its incessant revolutions on the analogy of a water-wheel the conglomeration in question follows as a matter of course. — We deny [the force of the above argument]. Why? Because, “ thereby mere origination can be effectuated.” The conglomeration, in other words, might have become accountable if there had been postulated some inducing-cause of the conglomeration. But this is what we do not perceive. For even though nescience and the rest be assumed to be related mutually as causes and effects, still an earlier member of the cyclic-chain could become—if it is to become anything at all—a cause of just the origination of a later member of the series: but thereby we do not discover any cause for the formation of the conglomeration. But, [resumes our opponent,] have we not said that nescience and the rest necessarily imply the conglomeration? To this we reply as follows: If [our opponent's] intention is that nescience and the rest, because they are incapable in the absence of the conglomeration to have any existential character at all, therefore they inevitably postulate the conglomeration,—we have in that case to demand an inducing-cause for this conglomeration. And such a cause, in our examination of the Vaiseshika theory (Translation, page 89), we have already declared to be quite impossible even when there be admitted [as did those theorists] eternally-existing atoms as also experiencing-souls [also per-

14 [*Brahmasūtrabhāṣya*, Trans.]

manent] who could serve as the substratum of the Karman-fluid (*reading*—*āsravāśrayabhuteshu*); how much the less possible must it then be, My dear Sir, when the atoms are assumed to be just momentary-phenomena, possessing no experiencing-souls [with whom to come into contact], and assuming no kind of a relation as between substratum and superstrata, as was postulated [between the self and the atoms]! If, as a second alternative, the intention be that nescience and the rest are themselves the cause of the conglomeration, we must ask: How [the terms like] nescience etc.—when it is as dependent upon that same [conglomeration] that they have obtained their very existential character—how can they possibly be the inducing-cause of that same conglomeration? If, as a last resort, you were to imagine that it is the actual series of [ready-made] conglomerations that exists in this beginningless Saṁsāra stretching along in a continuous line of succession, and that nescience and the rest are dependent upon that series, there too we demand: Is any new conglomeration that is to spring out of an earlier conglomeration required to be invariably similar [to its predecessor], or can it originate as similar or dissimilar without any definite rule in the matter? If the rule of an invariably similar sequence be assumed, then there would arise the contingency of the human-body never being liable to attain rebirths as Gods or lower-animals, or denizens of Hell: if, on the other hand, an [utter] absence of any fixed rule be assumed [Page 65] then in that case there would ensue the contingency of the human-body becoming in one moment an elephant, and in the [very] next moment a god or a man once more. Both these contingencies contradict the original hypothesis of our opponents.—Moreover, the experiencing-soul, for whose experience the conglomeration is assumed to take place, is not admitted into your system as a permanent experiencing-agent. Consequently the experience will have to be regarded as existing for the sake of the experience itself, and it cannot therefore be liable to be sought after by another. So too the liberation will have to be for the benefit of liberation itself; and there cannot be any one else desirous of that liberation. For, if another were to strive for both [the experience and the liberation], that one will have to endure through the whole period covered by the experience and the liberation; and if he is to endure in this fashion, then there would be a going

against the hypothesis of momentariness. Therefore, the chain of nescience and the rest may—if you please—occasion (if it is to occasion anything at all) just the origination of one [member of the series] from another [in cyclic order], but conglomeration cannot be thereby effectuated by reason of the absence of an experiencing-agent: such is the intention [of the Aphorism]. 19.

And also by reason of the sublation of the antecedent at the origination of the consequent. 20.

We have just said that inasmuch as nescience and the rest can become [at the most] the causes of the origination of each other, there can be no effectuation of the conglomeration. But even this “ becoming the cause of the origination ” [of each other] is not possible; this is what is being expounded in what follows. The adherent of the doctrine of momentariness makes the assumption that when a subsequent moment is being originated the antecedent moment is being simultaneously sublated. With such an assumption it is not possible to establish a relation of cause and effect between the antecedent and the consequent moments, because the antecedent moment that is being sublated—whether the process of its sublation has just commenced or has just been finished—being alike under the umbra of non-existence, cannot with reason be held to become the cause of the subsequent moment. But in case the intention [of the opponent] be to assert that it is *that* antecedent moment which has assumed the character of existence and which has fully evolved its own individualistic essence that is to be the cause of the subsequent moment, even so the position lacks cogency; for, if you were to ascribe unto one that has already assumed a full-formed existence, an additional creationistic-activity, then there would arise the contingency of that one coming into relation with another [extra] moment. And if it be intended that this creationistic-activity is no other than its very coming into existence, then too the position becomes untenable, because no effect that has not been imbued with the character of its cause can ever come into existence. And if you admit such an imbuing [of the effect with the character of the cause], then as the characteristic of the cause is [under the admission] made to persist during the moment of the existence of the effect, you will be reduced to throw overboard

your doctrine of the momentariness of things. But in case one were to assume the possibility of a cause-effect relation even without the effect being imbued with the characteristic of the cause, then, as such [absence of imbuing] is possible everywhere, [anything can be the cause of anything else, and] there would result the possibility of an ultra-extension of the argument. — Then again, the so-called origination and sublation of objects must either constitute the very essence of the object, or may be different stages of the same object, or may be something altogether distinct from that object. Neither of these alternatives can be sustained. If, to begin with, origination and sublation were to constitute the very essence of the object, then there would arise the contingency of the term 'object' and the terms 'origination' and 'sublation' being understood always as synonyms. And if our opponent were to suppose that there is some sort of a distinction between the terms, and that the terms origination and sublation merely denote the two, i. e., the initial and the final, stages of the object the existence of which forms the mid-point [of these stages], even so, inasmuch as the object is now made to come into relation with the three—the initial, the intermediate and the final—moments, there is here involved the renouncing of the doctrine of momentariness. If, finally, origination and sublation were to be two entities altogether distinct from the object, as the horse is distinct from the buffalo, then the object as such becomes in no way connected with origination and sublation, and so it will have to be admitted to be permanent. [Page 66] And if one were to hold that origination and sublation signified only the perceiving or the non-perceiving of a given object, even so the perceiving and the non-perceiving are the attributes of the percipient, and not the attributes of the object, so that there still would ensue the contingency of the object being eternal. For this reason too the Buddhistic theory lacks consistency. 20.

If [origination is assumed] without the cause [enduring beyond its own moment], that would be a contradicting of the accepted dogma : or else, there would result the simultaneousness [of cause and effect]. 21.

We have just said that, under the theory of momentariness, an antecedent moment, being swallowed up by sublation, cannot

possibly be the cause of the subsequent moment. If now our opponent were to assert that even without the cause [i. e. the antecedent moment] persisting [on into the period of the effect], origination of the effect might follow, then that would involve the contradicting of an accepted dogma. The accepted-dogma, in other words, that the mind and the mental [phenomena] originate after the conjoint-operation of four kinds of causes will have to be given up. And if the origination be assumed to result even where there is an utter absence of all causes, then, there being no restraining agency, everything would originate everywhere. If, finally, he were to urge that the antecedent moment endures until the origination of the subsequent moment is accomplished, even so there would result the simultaneousness of the cause and the effect, and thereby also there would be the same running counter to an accepted position. It is the accepted dogma that all the composite-things are momentary that will now come to be contradicted. 21.

Conative-sublation and Nonconative-sublation cannot be substantiated, because of an impossibility of interruption [in the stream of moments]. 22.

Then there is the hypothesis of the Nihilists—“All besides the triad is cognisable by the mind, is a composite-entity, and is transitory”—the triad in question being explained as (1) conative-sublation, (2) non-conative (or voluntary) sublation, and (3) space. All these three they regard as of the nature of mere negation, and as non-substantial and indescribable. The explanation is vouchsafed that a sublation of things preceded by a deliberate act of the mind is to be styled conative-sublation, the reverse of this is styled the non-conative (or voluntary) sublation; while space (ākāśa) signifies nothing more than a mere absence of limitation [in every direction]. Of the three, space will be refuted on a subsequent occasion, while here it is the two varieties of sublation that he is going to refute. “Conative-sublation and nonconative-sublation cannot be, “substantiated,” are, in other words, untenable. Why? “Because of an impossibility of interruption.” For, these conative and non-conative sublations must be held to belong to the stream [of momentary existences as a whole], or to the individual entities. Now they cannot

possibly belong to the stream; because, in all streams whatsoever, the individual constituents of the stream form an uninterrupted succession of causes and effects, so that it is impossible that the stream could at any point be brought to a stand-still. Nor can the two refer to the individual entities (or constituents); for, it is not possible that existential entities can at any time be overtaken by an utter annihilation, leaving no bond or vestige of it behind; since, in all its states, an existential-entity, by the very force of recognition, is observed to maintain its [generic] features without interruption. And even in the few possible eventualities where the recognition is not manifestly present, we will have to infer, from the observed fact of the maintenance of the [earlier] bonds [in some well-ascertained cases], that a similar absence of interruption exists even there. Consequently both the varieties of sublation imagined by our opponent cannot be made to stand the test of reason. 22.

And there are defects both ways. 23.

[Page 67] As to the sublation of nescience and the rest as postulated by our opponent, and which is held to fall under the category of the conative-sublation, that might proceed either from Right Knowledge with all its accompaniments, or might be spontaneous. If the first alternative is accepted, that would entail the contingency of a running counter to the dogma of effortless sublation, which is maintained [by our opponent]. In the latter alternative, there would follow the contingency of the instructions as regards the Right Path etc. proving futile. So, under both the alternatives, there would ensue the contingency of some defect or the other [in the position]; and hence the [Buddhistic] theory is proved to be discordant. 23.

The case being also alike with regard to Space 24.

Next as to the view maintained by the same disputant that the two varieties of sublation and the space are non-substantial, [and eternal]: amongst these the non-substantiality [and non-eternality] of the two varieties of sublation has been already refuted before : now he is going to do the same in the case of space (ākāśa). The hypothesis that space is non-substantial is

inadmissible, because, as in the case of the conative and non-conative sublation, so in the present case, there is absolutely the same perception of an entity. On the evidence of the Scriptural texts like [Tait. Up., ii. 1] —“From the ātman the ākāśa was born,” and others there is, to begin with, a clear declaration of the reality of the ākāśa. And for those averse to admitting their validity, one can assert the possibility of its inference on the ground of [the inferential-mark of] sound, seeing that other qualities like odour etc. are seen to subsist upon real entities like the earth. Furthermore, when our opponents imagine space to be a mere absence of covering (or delimitation in every direction) they must be reduced to own that, when a bird is already flying in space, there being a delimitation [of space, and so no longer a mere vacuum] in that direction, another bird desirous of flying will not have any [free] space to fly into. And to say that the other bird might fly there, where the delimitation [caused by the earlier flying bird] does not exist would be to assign to space in which you are now able to distinguish one absence of delimitation from another absence of delimitation, the character of a real positive entity; and it cannot therefore be a mere [negative] absence of delimitation [as is alleged]. Moreover, the Buddhistic disputant who maintains that space is mere absence of delimitation will have thereby to run counter to another of his cherished dogmas. For, in the Buddhistic canon, in the series of questions and answers beginning with (Abhidharmakośavyākhyā, page 16) — “Upon what, Reverend Sir, does the Earth rest ?” —at the end of the series starting with earth and the rest there comes finally the question —“Upon what does the Wind rest ?” —to which the reply given is —“The Wind is grounded upon Space.” And such a reply would not be plausible if space had been a mere unreality. Then again, there is a contradiction in the very assumption made that the two varieties of sublation and space—this triad—[Page 68] is indescribable, and withal unreal and eternal. For, there cannot possibly belong any such thing as eternity or non-eternity to what is admittedly an unreal entity; because all dealings based upon the relation of the substance and the attributes depend upon what is a real and positive entity. And once the relation of the attributes to the substance is conceded, then [space] will have to be reckoned as a real, existen-

tial entity, just like a jar and the like, and not as [a mere] non-descript unsubstantiality. 24.

And also owing to (the fact of) remembrance. 25.

Again, since our Nihilist opponent assumes the momentariness of all things, he ought to assume also the momentariness of even the percipient. But this is not possible because of the fact of remembrance. Remembrance is nothing but the memory arising subsequently to experience, i. e., perception. Now such remembrance is possible only if it belongs to the same subject who had the perception; for we never notice that what has been the object of one man's perception that another person ever remembers. In the absence of some identical percipient who has the earlier and the later knowledge, how can a cognition of the form—I have [already] seen this and I am seeing it [again now]—at all rise? Besides, it is a fact patent to all that it is only where one and the same person is the agent of perception and memory that there arises the recognition-consciousness in the form: I have [already] seen this, and I am seeing it again [now]. Had there been a distinct agent of knowledge in the two cases then the form of the consciousness should have been—I [only] remember, but it is someone else who has perceived it.—But nobody ever evinces such a consciousness. The whole world understands that where such consciousness exists, there the agent of perception and that of memory are two distinct individuals, as when it is said, I remember that this other person has seen it. But in the present case, in the consciousness of the form—I have [already] seen this [and am now seeing it again]—even our Nihilist friend would understand that the seeing and the remembering belong to one and the same agent; and he would not say, "Not I" and so gainsay the fact of the perception that the agent had already had, just as if one were to say the fire is not hot or does not give light. This being so, if one and the same agent is to be in touch with the moment characterised by perception and the moment characterised by remembrance, it becomes inevitable that the Nihilist should surrender his dogma of momentariness. So too, in one successive moment after another, being aware of the recognitive consciousness of the sameness of the self as being the agent of

the different successive cognitions right up to the very last breath, and likewise identifying as belonging to the authorship of the same self the earlier cognitions beginning right from the very birth, should not the Nihilist be ashamed to maintain yet the doctrine of momentariness? Were he to reply that this takes place on account of similarity, we would make the following rejoinder. A similarity in the form, 'This is similar to that' depends upon two factors; and inasmuch as the maintainer of the theory of momentariness cannot point to any one agent who could perceive the two factors as similar, the assertion that the consciousness of identity is based upon mere similarity is nothing but deceitful nonsense. And were he to allow that there is some agent who apprehends the similarity between the earlier and the later moments, then in that case, as the agent in question will have to endure during [at least] two moments, the dogma of momentariness will have to be surrendered. And if it be urged that the perception in the form, 'That is similar to this' is a new cognition altogether, and is not based upon the apprehension of two moments, the earlier and the later, we say No. For, 'This in comparison with that' implies two distinct factors as forming the material [of the subsequent judgment of similarity]. If a distinct cognition were to be the material for the judgment of similarity, the use of the expression 'This is similar in comparison with that' would become meaningless [Page 69] and the only form of the judgment would be 'This is similarity.' When in this manner a fact patent to everybody in the world is not recognised by any theorists, then neither the establishment of one's own doctrines nor the demolishing of the views of the opponent by means of arguments can possibly effect entrance into the flux of one's own mind any more than into that of the theorists themselves. Hence it is necessary that one should assert that only with reference to which there is a definite agreement that the thing is thus or thus only. Anything other than that, when it is being put forward would only proclaim the excess of one's own garrulousness. The judgment in question, accordingly, cannot properly be held to be due to mere similarity; because we are aware of the later thing being one with that [earlier thing], and are not aware of their being simply similar to each other. It is at the most barely possible, with reference to objects outside ourselves, that there may at times arise doubt as

15 [Brahmasūtrabhāṣya, Trans.]

to whether a thing is the same as the other thing or is similar to the other thing, since a deception as to the fact is conceivable; but as regards the percipient himself no such doubt can ever arise as to whether I am the very same [as the earlier percipient] or only similar to him, seeing that there is the indubitable consciousness of the identity of the self in the form—"The same I that have seen [so and so] the other day, that same I am to-day remembering it." For this further reason also the doctrine of the Nihilists is objectionable. 25.

[Entity can] never [originate] from non-entity, as it is nowhere observed [to do so]. 26.

For this additional reason also the doctrine of the Nihilists is to be pronounced objectionable, since, without assuming a permanent and enduring cause [to the world], they are forced to maintain that there springs entity from non-entity. They in fact declare the origination of entity from non-entity [in the text: compare Nyāyasūtra, IV. i. 14]—"As there is no coming into being without a [preceding] breaking asunder." For, they argue, it is from the seed that has been split asunder that sprout arises, so also from milk decomposed the curds, and from the lump of clay destroyed [as a lump] the jar, arises. If the effect were to spring up from an immutable cause, then, as there is no special determining circumstance, everything would originate from everything. Accordingly, inasmuch as it is from the seeds reduced to the condition of non-existence that sprouts and the like originate, they consider that existence originates from non-existence. To this we would make the reply—"Never from non-entity, as it is nowhere observed." From non-entity entity cannot arise. If entity were to be produced from non-entity, then as the non-existence [of the effect that is to be] can indifferently exist [everywhere], the assumption of a specific cause [to produce a specific effect] becomes uncalled for. For, that non-existence which results upon the destruction of the seeds etc. and the non-existence of the hare-horns and similar [impossible] things are both of them equally of the nature of non-entity; and so as regards their character as non-existences there is no distinction, which might lend significance to the assumption of specific causes to produce specific effects, as when it is held that it is from the

seed alone that the sprout is to be produced, and it is from the milk alone that the curds can be produced. When, however, the absolutely character-less non-existence is assumed to be the cause, then sprouts and the like might be produced even from hare-horns and the like—a thing that is nowhere met with. If, on the other hand, you were to postulate a specific characterisation even of non-existence, like blueness in the case of the lotuses etc., then on the ground of this very specific characterisation there would arise the contingency of even the non-existence being regarded as existence on the analogy of the lotus and the like. Nor can a mere non-existence by itself ever be the cause originating any effect, just because it has the character of mere non-existence, as for instance the hare-horn etc. Further, if existence were to originate from non-existence, then all its effects whatsoever would be imbued with a non-existential character, which however is never observed, seeing that everything [Page 70] whatsoever, in its own individual nature, is found to exist in its proper existential form. For, nobody, of course, ever regards plates and other effects exhibiting the characteristics of clay, as the effects belonging, say, to threads and the like. The world has agreed to regard effects possessing clay-characteristics as the products of clay and of nothing else. Next, as to the argument that, in the absence of an antecedent dissolution of the nature of the cause-substance, a something absolutely immutable cannot reasonably be assumed to function as the cause and that therefore it is right that entity should originate from non-entity, that, we say, is badly argued. Because, of a fact, it is gold and the like with their nature [as gold] altogether unchanged, which are recognised as being present in the ornaments and the other effects to which they are related as their causes. And in those causes such as the seeds wherein a destruction of their nature is actually observed, even there it is not the anterior [seed] state that is being thus destroyed which is to be assumed as the cause of the subsequent [sprout-state], but rather it is just those constituents of the seeds etc., which are *not* destroyed, and which continue over [into the effects], which have to be assumed as the cause of the sprouts and the like. Accordingly, inasmuch as mere non-entities like hare-horn etc. are not observed to give rise to any existential effects, and inasmuch as existing-entities like the gold etc. are observed to originate exis-

tential-effects, the [Buddhistic] assumption of an origination of existence out of non-existence cannot stand to reason. Moreover having made the assumption that the ' mind ' and the ' mentals ' originate from a four-fold causation, and the assumption likewise that from the atoms the aggregates in the form of the ' elements ' and the ' elementals ' take place, the Nihilists in the same breath postulate the origination of entity out of non-entity, and thereby merely stultify their own [earlier] assumptions and so make the world's confusion worse confounded. 26.

Besides thereby even the unseeking [people] might have an accomplishment [of their ends]. 27.

If indeed one were to postulate the origination of entity from non-entity, under that postulate even the unseeking and effortless persons might attain to an accomplishment of their ends. As non-existence is so easy to secure, the agriculturist, even though not spending any effort towards the cultivation of the field, might secure his harvest ; the pot-maker, even though not active in fashioning the clay, might have his earthenware ready-made ; and the weaver too, even though not stretching the threads [on the loom], might have his yarns-of-cloth as though he had stretched the threads. And then nobody would in any way be induced to as much as wish for heaven or for liberation. This, of course, is not proper, and nobody does ever make such an assumption. For this reason too the origination of entity out of non-entity is utterly untenable. 27. Here ends the Topic (4) entitled the Refutation of the Aggregates.

TOPIC 5 : REFUTATION OF IDEALISM.

(*Sūtras* 28-32)

As we have thus brought forward, with reference to the theory which maintains the reality of the external world, the various objections such as the impossibility of aggregation, etc., the Buddhist who maintains the doctrine of idealism is now stepping into the arena. We are told that the theory of the reality of the external world was put forward [by the Buddha] to suit the understanding of those of his disciples in whom he saw a firm

clinging to things of the outer world. That, however, was not the true intention of the Blessed One. His true intention was to assign reality only to the phases (skandha) of "vijñānas" or ideas. According to this theory of Idealism all our wordly experience, consisting of [the senses which are the] means of cognition, together with the objects which are the result of cognition, can be fully explained as existing *within* the percipient, and existing only in the form in which his cognitive-faculty (buddhi) becomes aware of it; (Page 71) [particularly so] because an external object, even though assumed to [independently] exist, cannot come within the scheme of our daily experience of the means-of-cognition and the rest unless and in so far only as it comes within the scope of the cognition-faculty.—But [we might ask] how do you know that all this experience is internal only, and that there does not exist any external object outside one's vijñāna or ideas? To that our opponent replies: Because it cannot be proved to exist. For, [he argues,] this external object [the reality of] which is to be assumed can either be atoms or an enmassed-collection of the atoms as in pillars and the like. Now, to begin with, atoms cannot reasonably be held to be the things to be signified by the ideas of pillars etc., because a cognition consisting of the form of the [separate and small] atoms cannot properly be held to belong [to a pillar-cognition]. Nor can their enmassed-collections, the pillars, be held to be aggregates of atoms, because it is impossible to clearly explain whether these aggregates are distinct or non-distinct from the atoms. In an analogous manner one should refute Generality and the other Padārthas.—Furthermore, in the case of our cognitions as they arise within us, and which agree in possessing a uniform nature in so far as they are [parts of] our inner-experience, that bias which each of them takes in connection with each object, viz., that this is a pillar-cognition, a wall-cognition, a jar-cognition, and a cloth-cognition, that bias cannot properly be explained in the absence of some distinctive-aspect belonging to the cognition itself; and so, inevitably, we have to assume that our cognitions take on themselves the form of the [alleged] object. And once this is conceded, inasmuch as the cognition in question has already made as its own the form of the [alleged] object, the assumption of a really existing external object becomes altogether uncalled-

for. — Besides, from the fact of their invariably arising [within us] simultaneously, we should inevitably conclude that the idea and its object are not distinct from each other. For, when one of the two is not perceived, there is no perception of the other; and this ought not to have been the case if the two had been by nature distinct entities, since there is no restrictive ground [for the invariable relation just mentioned]. For this reason also external objects do not exist. — The world, then, is to be viewed upon like a dream and such other things. Just as, for instance, the [varied] perceptions in our dreams in illusions, in mirages, in the twilight-phantoms (*gandharva-nagara*), and the like assume, some of them, the forms of the objects and others, of the agents of perception, although there are no real external objects corresponding: even so must we legitimately infer in fact the perceptions of the waking-life, the pillars and so forth, to be: for they too no less are perceptions. — And if it be asked: How can there arise, in the absence of any really existing external object, that variety in our perceptions? — the reply is, through the variety of our subliminal-impressions. For, in this beginningless mundane existence, there exists a mutual relation of cause and effect between our perceptions and the subliminal-impressions on the analogy of the seed and the sprout, and hence there is no contradiction of any kind involved. Moreover, through positive and negative judgments of concomitance, we infer that the variety of our perception is due to nothing save the variety of our subliminal impressions: for, in dreams and the like, even in the absence of any real external objects, we both of us agree in postulating a variety in the perceptions based upon a variety of the subliminal impressions; whereas, in the absence of subliminal-impressions [to correspond], I am not prepared to admit any variety in the perceptions caused by the [so-called] external objects. For this reason, likewise, we have to deny the existence of any external object. To this argumentation we make the following reply —

Non-existence [of external object] cannot be [maintained] because [of the fact] of their being [actually] perceived. 28.

It is not possible that we can conclude that the external object does not at all exist. Why? Because it is perceived. For, we

do perceive, corresponding to each [internal] idea, an external object such as a pillar, a wall, a jar, or a piece-of-cloth. For, we cannot assuredly deny the very thing that is being [actually] perceived. Just as some one, taking his meals and [Page 72] actually experiencing the satisfaction that the meal is calculated to give, were to say : "I am not taking my meals, nor am I experiencing the satisfaction"—even so a percipient actually perceiving—after the perceptive-contact of his sense with the object—an external object, were he to say : "I do not perceive the object, or that the object does not exist"—how could such a person gain any credence for his words ?—But, [our opponent may say,] I do not say that I do not perceive the object : I only say that I do not perceive it as outside my perception.—We reply, Well may you say this because your tongue is unfettered ; but you do not say that which is conformable to reason. For, even the conclusion that the object exists outside the perception has to be *per force* accepted on the ground of the very fact of perception. For, nobody ever comes to have the perceptive-knowledge that the pillar or the wall is no other than his own perception. All men in the world invariably have the perceptive-knowledge that the pillar, wall, and the like are *objects* of perception. That all the men in the world have just such a perceptive knowledge has to be inferred from the other circumstance also that even those who deny the existence of the external object practically assert the existence of the same external object in that they say—"That within us which assumes the form of an internal object of perception, that same appears *as if* it were outside." For even the authors of this assertion do experience the perceptive knowledge which presents objects as existing outside, and which indeed is patent to everybody's experience ; but in their desire to repudiate that external object they use the word 'as if' as when they say "*as if* it were outside." [This very fact testifies to their belief in the external object ;] for, otherwise why should they have used the expression "*as if* it were outside ?" For, assuredly, nobody will care to say that Vishnumitra appears *as if* he is a barren-woman's son. Hence those who claim to conceive of the reality in strict accord with experience should properly speaking assert that the perception refers to the object which is actually outside, and they ought not to say that it appears '*as if*' it were outside.'

But, [continues our opponent,] it is just because the external object cannot possibly exist that we have to conclude that it appears "as if it were external." This, however, is not a correct conclusion : because the possibility and the impossibility [of the existence of an object] are contingent upon the operation and the non-operation [respectively] of valid-proofs regarding them ; and it is not the case that the operation and the non-operation of the valid-proofs are to be made contingent upon whether [a priori] there is a possibility and impossibility [respectively of the things at all existing]. Accordingly, that which can be cognised by any one of the valid-proofs such as direct-perception and the rest, that is what is possible ; that, on the other hand, which is not to be cognised by any one of the valid-proofs, that is what is impossible. Now in the present case, when all valid-proofs whatsoever—each in its own fashion—are vouchsafing for the existence of the internal object, how can the same, in spite of the fact of its being perceived, be declared to be not possible on the strength of the untenability of all possible alternatives such as [the pillar's] being non-distinct or not non-distinct [from the atoms] ? And because the perceptive-cognition has the same form as the object, that is no reason why the object be altogether annihilated ; because, if the object were not to exist at all, we could not reasonably explain the fact of the cognition having the same form as the object ; and also because the object is actually perceived as being outside. For this very reason also, the fact of the idea and its object invariably arising [within us] simultaneously has to be understood as being due to the two being related to each other as the means (the object) and the end (the idea), and not to their being identical. — Moreover, in the jar-cognition or the cloth-cognition, it is the attributes-of-the-perception, viz., jar-ness and cloth-ness, which differ, and not the perceptive-cognition itself, which is the subject-to-which-the-attributes-refer ; just as, in the expression ' a white bull ' or a ' black bull, ' it is the two attributes of whiteness and the blackness that differ, and not the generic-nature of the bull as such ; so that the two (jar-ness and cloth-ness) establish the distinctness [from themselves] of the one (viz. perceptive-cognition), and the one (perceptive-cognition) the distinctness of itself from the two (jar-ness and cloth-ness]. Accordingly, the object and the idea have to be regarded as distinct. So likewise we have to understand in the case of

the perceptive and the memory cognitions referring to a jar. For, even in this case, it is the perceptive and the memory cognitions, which are the objects-qualified-by-attribute, that differ, and not the jar, which is the attribute in question; [Page 73] just as in the expressions the "milk-odour" and the "milk-taste," it is the odour and the taste—which are the objects-qualified-by-attribute—that differ, and not the milk, which is the qualifying-attribute: even so in the present case. Furthermore the two ideas belonging, the one to the earlier and the other to the later moment, and each of them having achieved all its life-purpose by being brought into consciousness of itself, cannot any longer be supposed to stand to each other in the relation of the perceived and the perceiver. And as a consequence, all the classifications of the ideas, and even their characterisation as being momentary; the analysis [of the contents of an idea] into a factor which gives it its own specific-individuality, plus a generic knowledge-factor; the distinction between what gives rise to a subliminal-impression [viz., the specific-individuality of an idea] and the subliminal-impression itself [which colours the idea of the next moment]; the theory of the nescience-caused confusion of men's ideas; the prescriptions as to what constitutes or what does not constitute right conduct; the declarations as to bondage and liberation; and all other similar dogmas enunciated by the opponent's own Sacred-canon—they will have to be, one and all, contradicted.

Here is another argument. We would demand why it is that, while assuming ideas and nothing but ideas, our opponent hesitates to assume also the external objects like the pillar, the wall, and others of their kind. If he makes the answer, Because idea is what is actually experienced, we would say it would be proper for him to assume that even the external object is as such actually experienced. And if it is argued that the idea—because, like a lamp, it is of the nature of luminosity—is experienced of its own nature, but not so the external object, [we reply] you are then prepared to admit what runs counter to all experience, viz., the agent's activity upon himself—as though the fire were to burn itself—and are yet unwilling to allow what is not contrary to experience and what is patent to the whole world, namely, that the external object is perceived by an idea which is distinct from

[the object] itself. Surely in this you have displayed your profound philosophical-insight! And besides, the idea, although conceded as being non-distinct* from the object, cannot be experienced by itself, for there too the same objection of making the agent operate upon himself holds. To this one may answer: If the idea were to be assumed as being the object of perception by an agent different from himself, then that agent will have to be perceived by a third, and so on, thereby starting a *regressus in infinitum*. Further, [he will argue,] if, in spite of the fact that the perceptive-cognition, like the lamp, is self-luminous, it were to be imagined to need another perceptive-cognition for its being perceived, then both [the perceptive cognitions] being exactly alike, there cannot obtain between them the relation of the illumined and the illuminator, so that the whole assumption becomes futile. Both these [we reply] are fallacious arguments, For, in the bare act of the apprehension of a given idea there does not arise any expectancy as to the apprehension of the agent who apperceives the idea in question, so that the very contingency of a *regressus in infinitum* simply does not arise at all. And it is quite possible for the idea and the agent apperceiving the idea [i. e. the witnessing Self]—being as they are divergent in nature—to properly stand to each other in the relation of the percipient and the perceived-object. And as the apperceiver is [directly and] indubitably established [in one's own consciousness], he cannot possibly be gainsaid.

Here is one more argument. When our opponent asserts that the idea, like a lamp, reveals itself spontaneously without standing in need of anything else to illumine it, it is tantamount to asserting that the idea, which no means-of-proof can ever reveal, needs also no percipient for its perception, as though a thousand lamps, blazing in the interior of some rock, were to make themselves manifest therein. Quite so, [our opponent may retort,] only, that idea is of the nature of self-consciousness, and [with this proviso] you are then practically conceding our own position. To that we say, No. For, it is unto another distinct percipient,

* Reading "arthāvyatiriktam" which gives better sense, although it is not found in any edition. With the reading "arthavyatiriktam" translate—And besides the idea, although distinct from the object, etc.

endowed with means-of-knowledge like the eyes, that the lamp etc. are found to become manifest. On the same analogy, inasmuch as the idea is nonetheless an object that needs to be illumined, it is only when another distinct percipient exists that we can agree to assent to its being manifest like a lamp. But, [our opponent may urge,] when [the Vedāntin] puts forward his thesis of the self-luminousness of the percipient, i. e. to say, of the witnessing consciousness, is he not, under the cover of a difference in expression, assenting to my own theory that the idea spontaneously manifests itself? To this we reply in the negative. For, you postulate for your "idea" origination, destruction, manifoldness, and [Page 74] many like attributes [which makes a world of difference between the "idea" and the witnessing-Self]. Consequently we have established the conclusion that the idea also, like unto the lamp, has to be an object of perception for some one else. 28.

And on account of divergence in nature, it is not like the dream and the like. 29.

Now, as to the statement made, while repudiating the external object, that the perceptions of waking-life such as the pillars etc. can exist, on the analogy of the perceptions of the dream and the like, even in the absence of any actual external object, because those also [no less than these] possess indifferently the nature of perception—to that we have to make the following rejoinder. To begin with, we have to point out that the perceptions of waking-life cannot possibly be on a par with the perceptions of dreams etc. Why? Because of a divergence in nature. For there is a divergence between the perceptions of the dream and of the waking life. What is that divergence? It is the presence and the absence of sublation, we reply. For, an object perceived in a dream is sublated as the sleeper becomes awake, [when he finds out—] "It is not true that I had fallen in with a crowd of people; for, I never had fallen in with the crowd: only my mind had become enervated by drowsiness, and so this erroneous notion sprang upon me." Just in an analogous fashion there arises a sublation, each in its own way, of magical visions and the like. An objection perceived during waking-life, on the other hand, say, the pillar etc., is not in this fashion

sublated in any other [subsequent] state.—Moreover, the dream-perception is no more than a recollection, while the waking-perception is a direct perception: and the distinction between recollection and direct-perception is plainly experienced by every one as being based upon contiguity and non-contiguity of the object in question, as when one says—"I remember my dear son but do not see him any longer, much as I wish to see him." The fact standing thus, it is not possible to formulate the syllogism—Waking-perception is false; because it is a perception; as for instance, the dream-perception—especially when the distinction between the two is a matter of one's own personal experience. It, above all, behoves those who pride themselves upon their "illumination" not to so flagrantly contradict one's own experience. —Then again, fearing lest it would entail a direct contravention of experience, our opponent recognises the impossibility of declaring outright that waking-perceptions have no real basis for themselves; but yet he wishes to declare the same on the ground of the similarity [of-waking-perception] with dream-perception. If now a given characteristic cannot belong to an object on its own merits, that same cannot belong to it because of the object's similarity with some other object. For, surely, while the fire is being actually felt as hot, it cannot become cool because of its being compared with water. And we have shown that the dreaming and the waking perceptions do differ. 29.

There can be no existence [of subliminal-impressions] because [external objects are held to be] not perceived. 30.

Then as to the contention that, even in the absence of any [external] object, the variety in our cognitions can very well be made out to be the result of a variety of the subliminal-impressions, against that we have to make a rejoinder. Our reply on the question is—"No existence" of the subliminal impressions can be tenable under your view, "because of the non-perception" of external objects. For, it is on the basis of the perceptions of objects that there arise, in connection with each of the objects [perceived], different kinds of subliminal-impressions. When, however, the objects are [held to be] not perceived at all, on the basis of what can there arise those diversified subliminal im-

pressions ? And in case a beginningless succession [of subliminal-impressions be postulated], it would be in accordance with the maxim of the row of the blind led by the blind, with the result that no stability can be attained and there would ensue a *regressus in infinitum* leading to the subversion of the entire phenomenal-experience [Page 75] without the point sought for being at all gained. Then, as to the positive and negative judgments that were put forth by our opponent while repudiating the external object, namely, that this mass of perceptions is based only upon the [assemblage of] subliminal-impressions, and not upon [any variety of] objects, even those, by virtue of the present argument, should be understood as having been controverted, seeing that in the absence of a perception of objects subliminal-impressions cannot properly be explained. On the contrary, inasmuch as, even in the absence of [previous] subliminal-impressions, a perception of objects [at times] actually occurs, and inasmuch as I do not admit, per contra, the possibility of subliminal-impressions arising in the absence of [previous] perception of objects: even the " positive and negative judgments " do, if anything, establish just the very existence of [external] objects. Finally, the subliminal-impressions are no other than latent-dispositions, and latent-dispositions cannot possibly be imagined to exist in the absence of a substratum [or subject, to whom they must belong]; for, such is the world's experience. Now, you have not [assumed] any substratum for your subliminal-impressions, because [as you allege] none such is attained by [any of the valid] means of knowledge. 30.

And also on account of momentariness. 31.

Next, as to the so-called " Receptacle-consciousness " which is brought forward for doing duty as the substratum for the subliminal-impressions, that too lacks in fixity of nature, because that too is assumed to be of momentary duration. It cannot therefore, any more than can the [transient] operative-phase-of-consciousness, serve as a proper abiding place for the subliminal-impressions. In fact, unless one assumes one abiding entity pervading the three [divisions of] time, or someone who is immutable and omniscient, it is not possible that there can be effected the ordinary activities such as the implanting of subliminal-impressions.

sions conformable to specific place, time, and circumstances, or the [evoking and] joining together of memories [already implanted]. In case, however, the "Receptacle-consciousness" be assigned a permanence of nature, that would go against the tenet of your school.—Finally, inasmuch as there is the same assumption of momentariness even in this idealistic theory, all those objections on the score of momentariness which were raised against the Realistic schools of Buddhism, namely, [Brahma-sūtra, II. ii. 20]—"And because at the origination of the subsequent there is [already] a sublation of the precedent," and the rest,—all those objections have to be applied against the present school also.—Thus then we have refuted both these Nihilistic schools, viz., the Buddhistic Realism and the Buddhistic Idealism. There is another school that maintains the doctrine of the Void; but that is so flagrantly in contravention of all valid-proofs, that we do not wish to spend any special effort in refuting the same. For, assuredly, all this mundane existence that is warranted by every one of our valid-proofs—it is not ever possible to gainsay it all, until one is assured of a basic reality [of a distinctive order]. The currently-accepted dogmas, accordingly, must obtain free scope as long as an exceptionally convincing doctrine going against them [e. g., the Brahman theory] is not forthcoming. 31.

And because it lacks cogency in every way. 32.

Why say more? From whatever point of view we try to test this Nihilistic philosophy to see if there be any substance underlying it, we find that in every manner of way it merely tumbles down like [the sides of] a well, dug amidst sands. We do not observe any rime or reason about it. And for this reason too any [further] dealing with this Nihilistic philosophy is absolutely futile. Furthermore, when the "Benevolent One" actually has taught three such doctrines opposed to one another, viz., Realism, Idealism, and the Doctrine of the Void, he has thereby plainly established his own propensity for incoherent prattle, or may-be, his malice for the world, evincing a desire that all the world might be confounded by believing in such contradictory theories. In every way therefore does this philosophy of the "Benevolent One" deserve to be condemned outright by persons

desirous of salvation—this is the meaning of the Author. 32.
Here ends the 'Topic (5) entitled the Refutation of Idealism.

TOPIC 6 : REFUTATION OF JAIN PHILOSOPHY.

(*Sūtras* 33-36)

[Page 76] The theory of the " Benevolent One " has been disposed of. We now proceed to repudiate the theory of the " undressed " philosophers. These believe in seven categories named by them—the soul, the non-soul, the inflowing-fluid, the inlet-closing, the drying-up, the bondage, and the liberation. In brief however, they recognise only two categories, the soul and the non-soul, inasmuch as the others can be subsumed, conformably to the nature of each, under these two. The same categories again they expand into five " extended-entities," viz., the extended-entity called the soul, the extended-entity called the body (pudgala), the extended-entity called dynamic-space (dharma), the extended-entity called static-space (adharma), and lastly the extended-entity called the Ether. Of each of these, again, they detail many subsidiary varieties of different kinds as adopted in their own school. And with regard to all of them they bring into operation their Dialectics known as the " Logic of the Seven Modes "—namely, " May-be it somehow-is," " May-be it somehow-is-not," " May-be it somehow-is-as-well-as-is-not," " May-be it somehow-is-indescribable," " May-be it somehow-is-and-yet-indescribable," " May-be it somehow-is-not-and-yet-indescribable," and " May-be it somehow-is-as-well-as-is-not-and-yet-indescribable." It is in this very same fashion that they apply this Logic of the Seven Modes in regard to the problems of the One, the Eternal, and so forth. Against that we have to say—

No : on account of the impossibility of [the contrary modes] applying to one and the same entity. 33.

The theory in question does not stand to reason. Why ? " On account of the impossibility in one and the same." For, it certainly is not possible that one and the same attribute-possessing-entity can have, simultaneously abiding within it, such contrary attributes as existence and non-existence, any more than it can

be both cold and hot together. For, those seven categories that they have fixed upon, so many and with such natures [and subdivisions] as might appertain to each: they must either be as they assert them to be, or they must not be so. For otherwise, if somehow they are to be as they describe them to be, and also somehow they are not to be as they describe them to be: such a non-determinate knowledge about them would by no means be valid, any more than a doubting judgment. But, [it may be urged,] when it is a knowledge of a determinate form—viz. that the essence of things is variable—that is being arrived at, that does not deserve to be invalidated like an ordinary doubting judgment. We say, No. For one who is proclaiming an absolutely unconditional variableness-of-essence in the case of all things whatsoever—for him even this so-called “determinate knowledge”—in so far as that is a thing (vastu)—will have to be submitted to the Disjunctive Dialectics of “May-be it somehow-is,” “May-be it somehow-is-not,” so that that knowledge will have also to be just as much non-determinate. So too, he who is to have the [alleged] “determinate” knowledge, and the fruit of this “determinate” knowledge will have to be classed both under existence if we follow one of the alternative judgments, and under non-existence if we follow the other. This being the case, how can the propounder of a philosophical system, who must [as such] claim [full] authoritativeness, ever possibly propound anything at all when the means-of-knowledge, the objects-of-knowledge, the agent-of-knowledge, and the resulting-knowledge itself have all alike a non-determinate form?—And how too can those who may claim to follow his teaching find an impulse to act up to the teaching laid down by him, when just what he has taught is itself of a non-determinate form? For, it is only when the fruit [claimed for a doctrine] is definitely ascertained to be its unfailing consequence that all the world can, without confusion or hesitation, proceed to practice what may have been laid down as the means to that end; and not otherwise. Hence it follows that one laying down a doctrine-and-code non-determinate in sense would, like a maniac or like one intoxicated, have his statements deemed unworthy of acceptance. — So also in the case of the five “extended-entities,” [Page 77] by applying the Disjunctive Dialectics with reference to the number (five-ness) of these extended-entities, in one alternative we reach the con-

clusion that may-be they are [five,] and in the other, may-be they are not five, so that the entities in question will have to be conceded as either less than five or more than five. — Nor again can the various categories be said to be indescribable. If they are in sooth indescribable, they would not even be mentioned. That they are being mentioned and that they should at the same time be indescribable is a self-contradiction, no less than when, being described, they are ascertained to be just as they are described and at the same time not ascertained to be so. So too, when one is irresponsibly-declaring—may-be there does exist or may-be there does not exist that “ Right Knowledge ” which is to proceed from a “ determinate ” knowledge [of the categories] as above referred to ; or again — may-be there does exist or may-be there does not exist any “ Wrong Knowledge ” which is contrary to the former—he must clearly belong to the genus of the maniacs or the intoxicated, and never to that of persons deserving credence. Likewise when the heaven and the liberation are to be classed in one alternative under existence and in the other under non-existence, or when under one alternative they are classed as permanent and under another as non-permanent—with such an absence of determinateness prevailing, it is not possible that any one can be urged to activity [as laid down in the doctrine]. And there does also arise the contingency of the soul and the other categories—whose natures have been fixed all along this beginningless time, and are ascertained accordingly from one’s own sacred canon—turning out to be not of the nature thus ascertained. Similarly also, as regards the soul and the other categories, since in one and the same attribute-possessing-entity two contradictory attributes of existence and non-existence cannot possibly co-exist,—in the one attribute of existence it being impossible to find the other attribute of non-existence, and in that of non-existence likewise it being impossible to find that of existence—the doctrine of the Arhat turns out to be quite incoherent. Hereby have to be understood as refuted the various non-determinist postulates as regards [one and the same entity possessing both] unity and plurality, permanence and transience, distinctness [from other entities] and non-distinctness, and the like. As regards the doctrine according to which they imagine that from atoms which they designate as “ Pudgalas ” there spring up [grosser] conglomerates, that is practically refuted by our earlier

refutation of the Atomic Theory, and we do not therefore expend separate effort in this place upon its refutation. 33.

So too [there arises the contingency of] the Ātman's non-integration. 34.

Just as there arises the contingency in the " May-be " Dialectics of the fault of the impossibility of ascribing to one and the same attribute-possessing entity [two or more] contradictory attributes, so too there arises the further liability of the doctrine to the fault of the self or the soul losing his integral-nature. How so? Because, the followers of the doctrine of the Arhat consider that the soul has the same dimension as the body. And when the soul is to have the dimension of the body, he will have to lose his integral-nature, and be of limited pervasion and definite dimension ; and as a consequence of this, the self will have to be regarded as, like the jar and so forth, non-eternal. Further, inasmuch as bodies are of [many and] non-determinate dimensions, the soul of a man, having become of the same dimension as the human body, may thereafter—in case he has, as an effect of the ripening of some one or the other of his karman, to assume the body of an elephant—not occupy the full space within the elephant's body ; and in case he has to assume the body of an ant, equally may he not be fully contained within that ant's body. And this fault will alike hold, even during the tenure of one and the same life, in the conditions of boyhood, youth, oldage, and the rest.—That may be, [our opponent might reply,] but the soul has an infinity of parts. And the very same parts of the soul would be compressed within a small body or would expand to fill a large body. [To this we reply] by demanding whether these infinite particles of the soul are or are not capable of resisting being pressed together so as to occupy the same space. If there be a resistance then the infinite particles [Page 78] cannot be fully contained within a limited space. If they are not capable of resistance then all these particles could just as reasonably be made to occupy the space of one particle, so that there would result no grossness in size and you will be reduced to consider the soul as atomic only. Nor is it further even possible to imagine that particles of the soul, being compressed, as they are to be, within the limits of merely one body, could ever be infinite. 34.

If it be urged that turn by turn, as they attain a large body, certain particles of the soul become added to, and as they attain a small body, certain particles fall away, even so our reply is—

And not even by alternation [of accretion and depletion] can there be absence of contradiction; because of [the faults of] mutability and the like. 35.

Nor can it be possible, even by assuming an alternating accretion and depletion of particles, to maintain the soul's possessing—without involving any contradiction—the same dimension as the body. Why ? Because of the contingency of the faults of mutability and the like. In case the soul be assumed to be accretive or depletive by the unceasing accession or attenuation of parts, it is inevitable that he should be liable to mutation ; and being liable to mutation, the contingency of his being impermanent like the skin [of the body] cannot be escaped. And then the postulate of bondage and liberation will be endangered, seeing that you assume that the soul enveloped within the eight-fold karmans is being drowned, like a gourd, into the ocean of mundane-existence, and it is through a snapping asunder of the bondage that he secures an up-rising motion. — Besides, these in-coming and out-going particles, inasmuch as they possess a liability to accretion and depletion, cannot — any more than the body and the like—be of the same essence as the soul. As a consequence, it will have to be supposed that some enduring particle is the soul. And it is not possible to clearly specify which one particle that soul is. Then too, you must specify to us from whence these in-coming soul-particles spring up and whither the out-going ones disappear. For, assuredly, they cannot spring up from or merge back into the elements, because the soul is non-elemental. Nor can there be put forth any other common or non-common store-house for all the soul-particles, because there is no valid-proof for it. Moreover, under the assumption, the soul will be non-determinate in form, because the in-coming and the out-going particles cannot be supposed to have the self-same dimensions. For these and other inevitable drawbacks it is not possible even to resort to the theory of the alternating accretion and depletion of soul-particles.

There is also another explanation of the aphorism possible. The preceding sūtra having already brought home the [fault of the] soul's non-permanence by urging the contingency—under the hypothesis of the soul being of the same dimension as the body and taking on [in succession] bodies of augmented or attenuated size—of the soul's non-integration, the present aphorism anticipates the contention that, in spite of the non-fixity of the [soul's] dimension, the soul can yet be—in its successive phases (paryāya), and following the analogy of the permanence of the flowing-stream—likewise permanent, this present position of the “undressed” philosophers having its parallel in that of their “red-robed” [friends] who assign permanence to the stream-[of-ideas] in spite of the transitoriness of the ideas themselves : and thereupon the Sūtra offers the reply—If this “stream” that is posited be an unreal entity, there would be the contingency of your assenting to the doctrine of soul-less-ness ; while if the soul-[stream] be a reality, the position would be still untenable by reason of the contingency of the mutability and the other drawbacks. 35.

And owing to [the assumed] durability of the ultimate [dimension of the soul], the other two [initial and middle dimensions] will have to be permanent, so that no difference [in the soul's dimension is possible]. 36.

[Page 79] Furthermore, the Jainas desire to assert the permanence of the ultimate dimension of the soul which he assumes at the time of his liberation. There arises consequently a contingency of the two earlier dimensions, the initial as well as the middle, being allowed permanence, so that there will have to be admitted a non-difference [as regards all the dimensions of the soul]. This means that they will all be of the size of just one [the very last] body and cannot be liable to fit in with the size of any other body of increased or decreased dimension.

Or, [we might interpret the aphorism slightly differently :] inasmuch as the last dimension of the soul is something fixed, in the two earlier states also the soul will have to be allowed to possess an unchanging dimension. And as a consequence the soul will ever have to be assumed to be — not of the size of the body

—but rather atomic or all-pervading invariably. For this reason too the Jain doctrine, like that of the Buddhists, has to be discarded as being not consequential. 36. Here ends the Topic (6) entitled Refutation of Jain Philosophy.

TOPIC 7 : REFUTATION OF THEISM.

(*Sūtras* 37-41)

[Impossibility] of the Lord [being only the efficient cause] on account of [resulting] incoherence. 37.

Now there is going to be refuted the theory which regards the Lord as merely the efficient cause. How do you deduce this ? Because in [the Vedānta Aphorism, I. iv. 23]—“ As well the material-cause, because of [the necessity of] conforming with the formal-enunciation and the illustration ”—and in [I. iv. 24] “ Also because of [self-]reflection ”—in these sūtras the Teacher has himself established the existence of the Lord possessing the nature of both the material as well as efficient cause. If there had been offered here a mere refutation of the Lord as the cause without any specification, then, because of the contradiction involved in that and the earlier positions, there would have resulted the liability to the charge that the Author of the Sūtras was speaking what was self-contradictory. Hence we conclude that the view that the Lord is not the material-cause, but only the controlling-agent, or merely the efficient-cause is the view which, as being opposed to the doctrine propounded in the Upanishads of the absolute unity of the Brahman, is here being carefully sought to be refuted. This doctrine of the Lord that runs counter to the Vedic doctrine appears under many forms. Some, to begin with, who take their stand upon Sāṃkhya-Yoga teaching, think that the Lord is the Controller of the Matter (Pradhāna) and of the Souls (Purushas), and is merely the efficient-cause ; the Pradhāna, the Purushas, and the Lord being divergent in nature from one another. The Māheśvaras on the other hand hold that there are five categories, namely, the Effect, the Cause, the Application, the Devout-practice, and Cessation-of-pain, which were taught by the Lord, the “ Herds-master,” for attaining liberation from the fetters that bind the Herd,—the

Lord, the "Herds-master," being the efficient cause. So too, certain other philosophers like the Vaiśeshikas, under one form or the other, declare, in conformity with their own philosophical position, the Lord as the efficient-cause. Hence the reply is given—"Of the Lord, on account of incoherence." Of the Lord, the Master of the Pradhāna and the Purusha, [Page 80] the functioning as the cause of the world by being merely the Controller, cannot be maintained. Why? On account of incoherence. What now is this incoherence? In the case of the Lord distributing beings into different classes as possessing base, middle, and highest natures, there arises the contingency of ascribing to him anger, hatred, and the like faults, as in the case of mortals like us, and so there has to be ascribed to him an unlordly character. And if it be contended that this is no deficiency because of [his showing due] consideration for the karman of beings, we say, No. Because if the karman and the Lord are to be the motivating and the motivated-principle in turn there results the contingency of the fault of mutual inter-dependence. And if it be retorted—No, because of beginninglessness, we demur; because, as in the present period so in the past periods also, there being the same fault of mutual interdependence, we would be reduced to the plight of a row of successive blind men. Moreover, experts in the Nyāya unanimously hold that [Nyāya Aphorism, I. i. 11]—"Defects are the inducing-causes of all activities." For, nobody who is not impelled by any defect is ever observed to bestir himself either in his own interest or in that of others. Everyone, in fact, even while bestirring himself for the sake of another, really does it, being impelled by his own interest. For this reason also the doctrine is incoherent; for, if the Lord be held to be actuated by self-interest, there would be the contingency of his being Lord no longer. Further, as the Lord is assumed to be a specific Purusha and as the Purusha is assumed to be characterised by utter-indifference [to all activity], the theory proclaims its own incoherence. 37.

And also on account of the impossibility of the connection. 38.

Once more there is the same incoherence. For, a Lord who is distinct from the Pradhāna and the Purushas cannot be the Con-

troller of the Pradhāna and the Purushas unless there exists some kind of a connection between them. Now, conjunction cannot possibly be the [required] connection, because the Pradhāna, the Purushas, as well as the Lord are alike omnipresent, and so impartite. Nor can the connection be of the nature of Inherence, because the relation of the substratum and the superstrata has not been defined in the case. Nor is it possible to imagine any other kind of connection, inferrable from the effect produced, because, that there is the cause and the effect relation in question has itself to be yet established. How about the theory that regards the Brahman as the cause ?—it may be asked. We deny the charge, for in this case the fact can well be explained by the relation of identity that is posited. Besides, the follower of the Brahman doctrine expounds the nature of the cause etc. on the strength of the Scriptures. Consequently no compulsion exists in his case that he must postulate everything in strict conformity with actual experience. In the case of our opponent on the other hand, as he expounds the nature of the cause etc. on the strength of [mere] analogy, he has to postulate everything in strict accord with actual experience—and this gives us the palm. And if it be retorted, that the opponent also can lay claim to the authority of the Scriptures because he too has his Scriptures composed by the Omniscient Lord,—we say, No ; because it would involve the contingency of a mutual interdependence. For, the Omniscient Lord is to be established on the authority of the Scriptures, and the Scriptures are to be established on the authority of the Omniscient Lord. For this reason then the doctrine of the Lord as put forward by the followers of Sāṅkhya-Yoga and others is untenable. In a like manner, in the case also of the other theories about the Lord falling outside the Vedic doctrine, we can bring home, in accordance with the facts of each case, the charge of incoherence. 38.

And also because of the impossibility of [assigning] any operating-basis [for the Lord]. 39.

[Page 81] And for this other reason also the Lord as imagined [by the Theists] on the strength of mere logic cannot be properly substantiated. For, as established by them, he will have to be imagined as starting [the world-creation] upon the basis

of the [given material in the form of] the Pradhāna and the rest, as the pot-maker does on the basis of the clay and the like. But that cannot be maintained. For surely the Pradhāna which is incapable of direct-perception, as being devoid of colour and the other qualities, cannot form the operating-basis for the Lord, since it is, in this, different from the clay etc. 39.

If it be replied that it can be, on the analogy of the senses, we say, No ; because of the [faults of a liability to] pleasure-pain-experience, and the like. 40.

That may be. But just as the group of senses, the eye and the rest, being themselves devoid of colour and the other qualities, and so incapable of being directly seen, can form an adequate operating-basis for the individual soul, so too will the Lord make the Pradhāna his operating-basis. Even so, the position does not stand square to reason. For, we infer that the sense-group and the like must have been made the [soul] operating-basis, because we find the pleasure-pain-experience and the rest actually experienced. In the present case, however, no such things like the pleasure-pain-experience are experienced. And in case a complete analogy with the sense-group is to be postulated, then, on the analogy of the transmigrating Purushas, there will arise the contingency of the Lord too being ascribed the pleasure-pain-experience and the rest. 40.

The two Aphorisms can be interpreted in another manner—

Because also of the impossibility of embodied-ness. [39].

And for this other reason also the Lord as imagined [by the Theists] on the strength of mere logic cannot be properly substantiated. For, in our world we always observe that it is an embodied person—one having a [human] body—who governs, as does for instance a king his kingdom ; but not one who is unembodied. Consequently, in conformity with that analogy, if one were to imagine some Lord not-warranted-by-Scriptures [as the cause of the world], there would have to be mentioned something possessing sense-apertures—a specific body—as belonging to the Lord. It is not possible to mention any such, because

bodies are things that are to be produced after the creative-process has been started, and they cannot possibly be postulated prior to the creation. And if the Lord is to be without any body, he cannot properly be the Creator, because that is what the world requires. [39].

• If a sense-furnished [body be assigned to the Lord] then by reason of the contingency of the pleasure-pain-experience and the like. [40].

If now, in strict conformity with the experience of the world, even to the Lord one were to assign, as one chooses, a body endowed with sense-organs, even so the hypothesis cannot be tenable. For, were the Lord to be embodied, there will ensue the contingency of his too being, like the transmigrating soul, liable to pleasure-pain-experience and the like, and so being no longer the Lord at all. [40].

There would either ensue finiteness, or else non-omniscience. 41.

And for this other reason also the Lord as imagined by [the Theists] on the strength of mere logic cannot be properly substantiated. For, he is assumed by them to be omniscient as well as infinite. And they also assume that the Pradhāna too is infinite and the Purushas likewise are infinite and all differing from one another. [Page 82] Now, we ask, does the Omniscient Lord ever demarcate the very limits of the Pradhāna, of the Purushas, and of himself, or does he not so demarcate them ? Under either supposition there does cling to the view a deficiency. How ? If, in the first place, the earlier alternative is adopted, inasmuch as there is a demarcation of the limits of the Pradhāna, the Purushas, and the Lord, they will have to be necessarily liable to come to their end ; because that is what is observed in the world. For in this our world, whatever object, for instance the piece-of-cloth and the like, has a limitation [in size, number etc.] that is found to be liable to come to the end. So likewise the three entities of the Pradhāna, the Purushas, and the Lord, because they are all capable of limitation ; and hence they will all alike be liable to reach their end. The dimension of quantity, for instance, reaches its limitation in connection with the triad of entities consisting of the Pradhāna, the Purushas, and the

18 [*Brahmasūtrabhāṣya*, Trans.]

Lord. So too the qualitative dimension as appertaining to the triad, [because it is quite necessary that it be thoroughly encompassed] by the Lord. So would be the case also of the numerical dimension appertaining to the Purushas. This being the fact, if some ones from out of the transmigrating-souls who are limited as regards their number, were to be freed from mundane existence, then, in their case, the mundane existence will terminate, and so likewise will their liability for mundane-existence terminate. So too as regards the others when they are being one after another liberated; so that the mundane-existence itself as well as the Purusha's liability to undergo the mundane-existence will alike meet their end. Again, the Pradhāna along with its own mutations is believed to be, in the interest of the Purushas, the operating-basis for the Lord; and that is what is meant by their being liable to transmigratory-process. When that [Pradhāna] itself comes to naught, what is there that can serve the Lord as the operating-basis,—and referring to what possible objects can we attribute to the Lord the powers of omniscience and control? Thus then the Pradhāna, the Purushas, and the Lord being all liable to reach their end, there will arise the contingency of their being liable also to possess origination. If, however, they are to be attributed both origination and termination, then that would be an acceptance of the doctrine of the Void.—If, on the other hand, with a view to avoid the deficiency pointed out, the second of the above alternatives is adhered to, then, inasmuch as the Lord cannot, under the supposition, be able to demarcate the limits of the Pradhāna, the Purusha, and himself, there will ensue the contingency of this extra deficiency in that the postulate of the Lord's omniscience will have to be thrown overboard. For this reason too the theory of the Lord as the cause, as accepted by the Logicians, is full of incoherence. 41. Here ends the Topic (7) styled Refutation of Theism.

TOPIC 8 : REFUTATION OF PĀNCHARĀTRA.

(*Sūtras* 42-45)

Those who regard the Lord as the non-material cause—as the [merely] controlling-cause, or as the efficient cause alone,—their view has been repudiated. Those, however, who regard the Lord

as the cause of both kinds—the material and the controlling cause—it is the view of these that is now about to be refuted. But, it may be asked, even on an appeal to the Scriptures, it was just this very nature of the Lord, viz. his being both the material-cause and the controlling-cause, that was previously ascertained. And it is an accepted principle that a Smṛiti text that agrees with the Scriptures is valid. For what reason then it is that such a view is now intended to be refuted? Our reply is—Although in this and other parts of the doctrine there is agreement, and therefore there is no scope for any divergence, yet there is another part of the doctrine where room for divergence does exist; and hence we exert ourselves for its refutation.—Now the Bhāgavatas maintain that the one Adorable Lord, Vāsudeva, whose nature is stainless knowledge is the Highest Reality. He starts out by distributing himself into four parts: that in the form of the Mode Vāsudeva, in the form of Mode Saṁkarshana, in the form of the Mode Pradyumna, and in the form of the Mode Aniruddha. What is called Vāsudeva is the Supreme Soul. Saṁkarshana is the individual Soul. Pradyumna is the mind; [Page 83] while Aniruddha is the “I”-consciousness. Of these Vāsudeva is the Highest Cause, while Saṁkarshana and others are effects. The Lord, then, as thus constituted, has to be worshipped for a hundred years by pilgrimage [to temples], by collecting materials of worship, by worship, by recitation of names-and-prayers, and by devout-meditation, so that thereafter, having reduced all his affliction, one attains the same Adorable Lord.—Now, that view in this theory wherein is maintained the well-known Supreme Soul, Nārāyaṇa, who is beyond the Unmanifest (Prakṛiti) and who, the Inward-Soul of all, abides in Himself after distributing Himself amongst the innumerable Modes—that it is not intended to gainsay, seeing that from Scriptural texts like [Chhāndogya, vii. 26. 2]—“He assumes one Mode, He assumes three Modes”..... the Supreme Soul is ascertained to be manifesting Himself into many Modes. Nor is it intended to contradict that worship of the same Adorable One in the form the pilgrimage etc., continuously and with concentrated mind, seeing that such devotion to the Lord is well-established in the Scriptures and in the Smṛitis. But as to the assertion, however, that Saṁkarshana is produced from Vāsudeva,

Pradyumna from Saṁkarshana, and Aniruddha from Pradyumna as to that we have to say—

On account of the impossibility of origination. 42.

It is not possible that from the Supreme Soul known as Vāsudeva there should originate the Individual Soul known as Saṁkarshana, because of the contingency of the faults of impermanence etc. For, if the Individual Soul is to be a produced entity, there could arise the contingency of the faults like the Individual Soul's being impermanent, etc. And as a consequence he cannot possibly attain the salvation consisting in an attainment of the Adorable Lord, because when an effect attains to its cause there arises the necessity of its being therein re-absorbed. Further the Teacher is going to repudiate the origination of the Individual Soul in the Aphorism [II. iii. 17]—" Not the Soul [to originate], because Scriptures do not enumerate him [amongst the produced entities], as it would lead to his impermanence etc., as follows from the same [texts]." So this view is not tenable. 42.

And there cannot be [origination] of the instrument from the agent. 43.

For this other reason too the view is untenable. For, we never observe that from an agent like Devadatta etc. an instrument like the axe etc. is produced ; whereas the Bhāgavatas maintain that from the soul styled by them as Saṁkarshana the instrument—the mind—denominated as Pradyumna is produced ; and that from the mind thus produced from the Agent there originates the "I"-consciousness known as Aniruddha. We are unable to accept such a conclusion in the absence of any analogous illustration. Nor have we come across any Scriptural text to that effect. 43.

And in case knowledge and other [Divine] qualities [be ascribed] there is [still] a non-controverting of that [other objection]. 44.

But it may be urged—these Saṁkarshana and the others—are not intended by us to be merely the Individual Souls, etc., but rather, they are assumed to be themselves the Lords, all of them' endowed with Lordly qualities like knowledge, Lordship, capacity, power, prowess, and glory : [Page 84] they are in fact each

of them Vāsudeva himself:; stainless, self-sufficient and perfect. Hence the deficiency as above set forth, namely, impossibility of origination, does not become attributable. To that we make the reply—Even so there is a non-controverting of the impossibility of origination: the defect pointed above, namely, impossibility of origination, does still become attributable in another form, that is what he means. How? If your point is that the four [Modes] beginning with Vāsudeva are quite distinct from one another, they being Lords endowed with similar natures, then, inasmuch as they cannot all form only one entity, there results the gratuitous hypothesis of more than one Lord, because all purposes can well be accomplished by positing just one Lord. There would also be entailed a repudiation of one's own accepted dogma, because the assumption is made that the Adorable Lord Vāsudeva is the one and the only Highest Entity. If however the point be that these four Modes of similar natures belong to one and the same Adorable Lord, even so the 'impossibility of origination' remains [as a deficiency] equally patent as before. For, it is not possible that there should ensue the origination of Saṁkarshana from Vāsudeva, of Pradyumna from Saṁkarshana, and of Aniruddha from Pradyumna; because there does not exist any specific difference between the one or the other of them. For, it is necessary that there should exist some specific difference between the cause and its effects, as for instance, between the clay and the pots. For, in the absence of any such difference, it is not possible to discriminate between the effect and its cause [as effect and as cause]. And the followers of the "Pāñcharātra" theory do not assume in the case of Vāsudeva and the others any differentiation based upon a more or a less of the knowledge, Lordship, and the other qualities as existing in any one of them or in all of them. For, they maintain that all the Modes are equally Vāsudeva without any distinctions whatsoever. Then again, these Modes of the Adorable Lord need not be limited only to the number four: for, it is understood that the whole world, from Brahma-deva down to the blade-of-grass, constitutes so many Modes of the Adorable One. 44.

And also on account of contradictions. 45.

And there does exist many a contradiction in this system,

such as the imagining of the qualities as being at the same time the substrates-of-qualities. For, we find that they regard knowledge, Lordship, capacity, power, prowess, and glory as the qualities, and again call them as the Adorable Vāsudevas, as so many Selves, so to say. There exists also a contradiction of the Scriptures, inasmuch as we find them reprobating the Vedas as when it is said that Sāṇḍilya acquired this [Pāñcharātra] Philosophy after he found that none of the four Vedas could afford him the Highest Bliss. For this reason too it is evident that this theory is untenable. 45. Here ends the Topic (8) entitled Refutation of Pāñcharātra.

Here ends—in the Work of the holy and blessed Feet of the Revered Śaṅkara, the Pupil of the holy Feet of the Revered Govinda, the blessed Ascetic-preceptor with the Title of "Paramahansa,"—in this Comment expounding the Real Nature of the Embodied Self—the Second Quarter of the Second Chapter, entitled the Tarka-pāda.

GLOSSARY OF TECHNICAL TERMS

(EXCLUDING PROPER NAMES)

WITH THEIR ENGLISH EQUIVALENTS*

ब्रह्मसूत्रशाङ्करभाष्ये स्मृतितर्कपादयोः

पारिभाषिकशब्दानां सार्थसूचिः

अकृतात्स्न्य II. ii. 34—non-integration.

अकृताभ्यागम II. i. 36³—liability for what is not done.

अङ्गाङ्गिभाव II. ii. 2²—relation of the principal and the subsidiary ; of subservience and dominance.

अजीव II. ii. 33²—no-soul.

अतन्त्र II. ii. 13¹⁵—not an accepted technicality ; what is of no consequence ; not essentially needed.

अतिदेश II. ii. 11⁵⁷—analogical transference ; analogical extension of an argument.

अतिप्रसङ्ग II. i. 18⁷⁴—unwarranted license in reasoning.

अतिशय II. i. 6¹⁸—(i) specific difference ; II. i. 18⁷—(ii) subtle pre-disposing form ; II. ii. 6⁹—(iii) accretion ; also *under* आत्मातिशय, निरतिशय.

अतीन्द्रिय II. i. 1⁵⁷—beyond the range or purview of the senses.

अदृष्ट II. ii. 11¹⁰—unseen-principle.

अधर्म II. ii. 33⁵—static-space ; also *under* धर्माधर्मौ.

अधिकार II. i. 18³²—status.

अधिष्ठातृ II. ii. 37¹⁷—controller.

अधिष्ठान II. ii. 39—(i) operating-basis ; (ii) embodied-ness.

अधिष्ठिय II. ii. 39³—operating-ground.

अन्धपङ्गु[न्याय] *under* न्याय.

अन्धपरंपरान्याय *under* न्याय.

अव्यात्म II. i. 3²¹—dealing with soul.

अव्यारोपित *under* अविद्याव्यारोपित.

अनागतसंबन्धादतीतसंबन्धो बलवान् [न्याय] *under* न्याय.

अनपेक्ष II. i. 4¹—absolutely or independently valid.

अनवकाश II. i. 1—possessing no scope.

* Normally only one occurrence of a term is noted, except where it has more than one sense.

अनवस्था II. i. 18¹⁴—(i) non-finality ; II. ii. 30⁵—(ii) *regressus in infinitum*.

अनाक्षेप II. i. 1²³—nugatory attack or objection.

अनुग्रहीतृत्व II. i. 34²⁶—function of meting out rewards.

अनुग्राहिका II. i. 5²⁶—one guarding over.

अनुपपत्ति II. ii. 39¹—inexplicability ; impossibility to establish or substantiate.

अनुपमर्द *under* स्वरूपानुपमर्द.

अनुयायिन् II. ii. 26¹—enduring, continuing over into.

अनुषङ्ग *under* दोषानुषङ्ग.

अनुष्ठान *under* धर्मानुष्ठान.

अनुष्ठेय II. i. 1¹⁸—involving exercise of activity.

अनुष्ठेयरूप II. i. 4⁵—implying specific course of action.

अनुस्मृति II. ii. 25³—memory ; recognitive consciousness.

अनेकात्मक II. i. 14³¹—(i) possessing more than one nature ; II. ii. 33¹⁵—(ii) having variable essence.

अन्यार्थदर्शन II. i. 1⁷¹—text(darśana) possessing something else as its main-topic(artha).

अन्वय II. i. 4³⁷—(i) continuance or persistence ; II. ii. 1³⁹—(ii) homogeneous-constitution ; also *under* निरन्वय.

अन्वयव्यतिरेक II. i. 5³⁰—invariable concomitance and non-concomitance ; positive and negative judgments of concomitance.

अन्वयविच्छेद II. ii. 22¹²—non-interruption in the continuity of generic-features, or persistent-factors.

अपकर्ष II. ii. 12⁵—limit of sub-division.

अपचय II. i. 18⁶⁷—wasting-away or depletion.

अपदेश II. ii. 1⁹—pretext ; profession.

अपरिग्रह II. i. 3¹⁰—rid of all ties and possessions.

अपरिच्छिन्न II. i. 29²—infinite ; of unlimited dimension.

अपवर्ग II. ii. 6⁸—salvation ; liberation.

अपवाद II. ii. 31¹²—exception ; what repudiates.

अपवादाभावे उत्सर्गप्रामाद्विन्याय *under* न्याय.

अपीति II. i. 8—[world]-dissolution.

अप्रतिघात II. ii. 34¹²—absence of resistance.

अप्रतिष्ठान *under* तर्काप्रतिष्ठान.

अप्रतिसंख्यानिराध II. ii. 22—non-conative sublation.

अप्रदेशत्व II. ii. 17⁵³—non-divisibility in space.

अप्रवृत्त *under* प्रमाणप्रवृत्त्यप्रवृत्तिपूर्वक.

अभावान्वित II. ii. 26¹⁷—imbued with non-existential character.

अभिगमन II. ii. 42¹³—pilgrimage [to temples and holy places].

अभिज्वलन *under* चित्ताभिज्वलन.

अभिध्या II. ii. 37⁴—[self-]reflection.

अभिध्यान II. i. 25⁶—meditation.

अभिभव *under* उद्भवाभिभव.

अभियुक्त II. i. 11³—learned

अभिमानिव्यपदेश II. i. 5—statement concerning Superintendents.

अमौतिक II. ii. 35¹³—non-elemental; not element-produced.

अभ्युपगमविरोध II. ii. 24¹²—running counter to cherished or accepted dogma.

अभ्युच्चय II. i. 23⁹—cumulation of arguments.

अभ्युपाय II. i. 3⁵—means, mode, method.

अभ्युपेतहान II. ii. 7⁵—abandoning an accepted position.

अयुतसिद्ध II. ii. 17¹⁹—entities proved incapable of separate existence.

अर्थयाथात्म्य II. i. 27²⁷—true-nature-as-it-is of things.

अर्थवाद II. i. 5²⁴—amplificatory statement.

अर्थवैनाशिक II. ii. 18²—semi-nihilist.

अवभास्यावभासकभाव II. ii. 28⁷⁷—relation of the illumined and the illuminator.

अवयवावयविविभाग II. ii. 12⁵—process of dividing a whole into its component-parts.

अवयविन् II. i. 18²⁰—whole; aggregate-of-parts; also *under* अवयवावयविविभाग.

अवष्टम्भ II. i. 4⁴—bar-to-further-procedure; also *under* तर्कावष्टम्भ.

अवस्थिति II. ii. 36—durability.

अविकार्य II. i. 6²⁷—unmodifiable.

अविकृत II. i. 21⁸—in the unmodified form.

अविच्छेद *under* अन्वयविच्छेद.

अविद्याकल्पित II. i. 14¹⁴⁵—fabricated by nescience.

अविद्याध्यारोपित II. i. 9²¹—superimposed by nescience.

अविद्यानिवृत्ति II. i. 14¹⁰⁹—cessation of nescience.

अविद्याप्रत्युपस्थापित II. ii. 2²⁸—set afoot by nescience.

आवद्योपपन्न II. ii. 28⁶⁶—confounding through nescience.

अव्यक्त II. i. 1³⁹—unevolved; unmanifest.

अव्यातिरेक *under* व्यातिरेकाव्यातिरेकादिब्रह्म.

अव्याकृत II. i. 17⁷—unevolved.

अष्टका II. i. 3¹⁸—kind of Śrāddha: *see* Notes.

असत्कार्यवाद II. i. 10⁵—doctrine of origination of non-existent; of non-existence of effect prior to origination.

- असमञ्जस II. i. 8⁵—not-standing-to-reason ; incoherent.
 असमवायिकारण II. ii. 12³⁹—non-inherent or operative cause.
 असाधकत्व II. i. 1⁷¹—not possessing probatory power.
 अस्तिकाय II. ii. 33⁴—extended-entity.
 अहंश्रेयस् II. i. 5²⁰—self-supremacy.
 अहंकार II. ii. 42¹²—“ I ”-consciousness.
 आकाङ्क्षा II. i. 14¹⁰⁸—expectancy.
 आकाश II. ii. 33⁵—(i) ether ; II. ii. 22²—(ii) space.
 आकाशघटाकाशन्याय *under* न्याय.
 आक्षेप II. i. 4¹—objection; also *under* अनाक्षेप.
 आगम II. ii. 38¹⁰—Scriptures.
 आत्मलाभ II. i. 6⁴³—(i) gaining scope for ; II. i. 18⁴²—(ii) acquiring concrete-individuality.
 आत्मातिशय II. i. 18⁷⁴—subtle-form of the inner-essence.
 आत्यन्तिक II. ii. 10⁴⁸—absolute.
 आध्यात्मिक II. i. 31⁴—(i) spiritual ; II. ii. 1²⁰—(ii) internal.
 आनर्थक्य II. i. 1²⁰—purposelessness.
 आनुमानिक II. i. 2⁶—the inferred-entity (Pradhāna).
 आयतन *under* करणायतन.
 आयतनभाव II. i. 6—aptitude to be the abode of.
 आरम्भण *under* वाचारम्भण.
 आरम्भकत्व II. ii. 11³⁴—productive-operation.
 आराधन II. ii. 42¹⁹—propitiation ; worship.
 आर्ष II. i. 11²⁰—composed by Sages.
 आर्षज्ञान II. i. 1²⁶—Sage's intuitive-knowledge.
 आल्यविज्ञान II. ii. 31¹—receptacle-consciousness.
 आवरणाभाव II. ii. 24⁸—absence of covering or delimitation.
 आविर्भाव II. ii. 11¹³—manifestation.
 आशय II. ii. 18¹⁸—reflective-consciousness.
 आश्रय *under* इतरेतराश्रयत्व, प्रवृत्त्याश्रय, वासनाश्रय.
 आश्रयाश्रयिभाव II. ii. 38⁴—relation between the substratum and the superstrata.
 आसन II. i. 3⁹—Yogic posture.
 आन्व II. ii. 33²—(i) inflowing-fluid ; II. ii. 19¹⁶—(ii) karman-fluid.
 इज्या II. ii. 42¹³—worship.
 इतरेतरप्रत्ययत्व II. ii. 19¹¹—mutual relation of cause and effect.
 इतरेतरभावापत्ति II. i. 13⁹—mutual transformation in nature.
 इतरेतराधीनत्व II. ii. 17⁸—dependence upon each other.
 इतरेतराश्रयत्व II. i. 35⁴—mutual interdependence.

इन्द्रियसंनिर्घ II. ii. 28³⁴—perceptive-contact of the senses.

इयत्तापरिच्छिन्न II. ii. 41⁶—limited in dimension, size, quantity.

ईशित्रीशितव्याभाव II. i. 14¹³⁷—absence of world-controller and objects controlled.

ईश्वरप्रणिधान II. ii. 42²⁰—devotion to the Lord.

उपकार्योपकारकभाव II. i. 42⁷—relation of auxiliary to principal.

उपक्रम II. i. 17⁹—commencement or earlier part [of a text].

उपक्रमे संदिग्धार्थवाक्यस्य तच्छेषानिर्णयन्याय *under* न्याय.

उपगम *under* वैषम्योपगमयोग्य.

उपचय II. ii. 12³⁵—increase in volume; also *under* मूर्त्युपचय.

उपचित II. i. 18⁶⁶—having accretion [of parts].

उपजीवन II. ii. 17¹—substantiating.

उत्पत्तिकारण II. i. 1¹—cause of origin.

उत्पत्तिहेतु II. ii. 26¹⁶—cause of origination.

उत्सर्ग II. ii. 31¹²—general rule; current dogma.

उद्भवामिभव II. ii. 10⁵⁰—rising-up and going-down; dominance and subservience.

उपन्यास II. ii. 15²—setting forth.

उपपत्ति II. i. 34²—explication; excogitation.

उपसृज्य *under* अविद्योपसृज्य.

उपमर्द *under* अनुपमर्द, स्वरूपोपमर्द.

उपलम्भ *under* सहोपलम्भनियम.

उपसंहार II. i. 34⁸—(i) destruction; also *under* उपसंहारकारण;

II. i. 24—(ii) accumulation [of causal paraphernalia];

also *under* कारकोपसंहार.

उपसंहारकारण II. i. 1³—cause of dissolution or absorption.

उपलब्धि II. ii. 28³⁹—perceptive-knowledge.

उपादान II. i. 15⁰—(i) material or constituent cause; II. ii. 19⁴—

(ii) effort; II. ii. 42¹⁷—(iii) collecting materials

[for worship].

उपाधि II. i. 15²⁴—specific-limitation; limiting-adjunct.

उपायोपेयभाव II. ii. 28⁵⁶—relation of the means to the end.

उपासन II. i. 14¹⁷⁹—meditation.

एकान्त II. i. 6⁴—invariable rule; absolutely valid proposition.

एकान्तिक II. ii. 33²³—unfailing; certain.

ऐतिह्य II. i. 4¹⁷—tradition; a mere “so-it-was.”

ऐदंपर्य II. ii. 1¹—true or ultimate intention.

ऐश्वर्य II. i. 25⁶—potence; prowess.

औत्सुक्यनिवृत्ति II. ii. 6¹²—dispelling the longing.

- करणग्राम II. ii. 40¹—group of senses.
 करणायतन II. ii. 40¹⁰—[body] endowed with sense-apertures.
 कर्मकाण्ड II. i. 14³⁵—sphere of works.
 कर्मविपाक II. ii. 34⁶—ripening of the karman.
 कर्मोष्ठक II. ii. 35⁷—eightfold karmans.
 कल्प II. i. 36²¹—world-creation; æon.
 काय II. i. 14⁴⁸—body; embodied-existence.
 कारक *under* क्रियाकारकफलक्षण.
 कारकव्यापार II. i. 18⁴⁹—operation of causal agencies.
 कारकोपसंहार II. i. 24³—collecting-together of materials-and-instruments.
 कारण *under* असमवायिकारण, उत्पत्तिकारण, उपसंहारकारण, कार्यकारणानन्त्यत्व, निर्णयकारण, स्थितिकारण.
 कार्य *under* असत्कार्यवाद, सत्कार्यवादिन्.
 कार्यकरणभाव II. i. 4²⁷—making-up bodies and organs.
 कार्यकरणसंघात II. i. 14¹⁵⁶—aggregate of body and organs.
 कार्यकारणानन्त्यत्व II. i. 7¹²—non-distinctness of effect from cause.
 कार्यवैचित्र्य II. i. 23⁷—diversity or manifoldness of creation.
 कुण्डवदन्याय *under* न्याय.
 कूटस्थ II. i. 14²⁰—immutable: *see* Notes.
 क्रियाकारकफलक्षण II. i. 14⁵⁹—based upon actions, means-to-actions, and fruits-of-actions.
 क्षणिकत्व II. ii. 19²⁹—momentariness.
 क्षेत्रज्ञ II. i. 1³⁷—knower of the “field.”
 गुण II. ii. 4¹—aspect; quality.
 गुणगुणित्वकल्पना II. ii. 45¹—assuming qualities to be identical with substrates-possessing-qualities.
 गुणप्रधानभाव II. i. 4⁴²—relation of auxiliary and principal; nature of subservience and dominance.
 गुणवृत्त II. ii. 9⁴—nature or behaviour of the aspects.
 गुणवैषम्य II. ii. 8⁴—disturbance in the equilibrium of aspects.
 ग्राह्यग्राहकत्व II. ii. 28⁶—nature of perceived and perceiver, or object and agent (of perception).
 चतुरणुक II. ii. 11¹⁷—quaternary-compound [of atoms].
 चित्ताभिज्वलन II. ii. 18¹⁵—flaring-out of [isolated thought-phases into] mind[-agglomerate].
 चैत II. ii. 26²⁸—mental; “mind”-produced.
 चोदना II. i. 1¹⁴—injunction.
 जाति II. ii. 27¹²—generality; class-concept.
 ज्ञानवैचित्र्य II. ii. 30—variety in cognitions.

- तत्त्वाव्यवस्थान II. i. 1⁶⁵—absence of definiteness about reality.
 तन्तुपटन्याय *under* न्याय.
 तन्त्र II. i. 1⁹⁷—theory; doctrine; also *under* पुस्ततन्त्र, वस्तुतन्त्र, वेनाशिकतन्त्रव्यवहार.
 तप्ति II. ii. 10⁸⁴—oppression; heating.
 तप्यतापकभाव II. ii. 10⁴⁴—relation of the oppressed (heated) and the oppressor (heater).
 तर्कशास्त्र II. ii. 1¹—rationalistic system.
 तर्काप्रतिष्ठान II. i. 11—non-stability of reasoning.
 तर्कावष्टम्भ II. i. 2⁸—support from reasoning.
 तात्पर्य II. i. 1⁵²—purport.
 तादात्म्य II. i. 18¹²—identity-of-essence.
 तार्किक II. i. 11³⁸—logician.
 तापक *under* तप्यतापक.
 तिरोभाव II. ii. 10¹³—non-manifestation.
 तीर्थकर II. i. 11⁷—propounder of a system.
 त्र्यणुक II. ii. 11²²—tertiary-compound [of atoms].
 दर्शन II. i. 3³¹—(i) Vedic-passage; (ii) realisation-by-know-
 ledge; II. ii. 1⁴—(iii) school, system-of-thought.
 दार्शनिक II. i. 25¹²—case, theme or matter-in-hand for which
 illustration is adduced.
 दृक्शक्ति II. ii. 7¹—power-to-perceive.
 दृष्ट्याददृष्टसिद्धि[न्याय] *under* न्याय.
 दृष्टान्त II. i. 9—parallel or analogical instance.
 दोषानुषङ्ग II. ii. 16⁵—liability to defect or deficiency.
 द्व्यणुक II. ii. 11¹¹—binary-compound [of atoms].
 द्वयायत्त II. ii. 17³⁶—dependent upon two [positive] entities.
 द्वैतिन् II. i. 3³¹—dualist.
 धर्म II. ii. 33⁵—(i) dynamic-space; II. i. 34¹³—(ii) merit;
 II. i. 37—(iii) attribute or quality; II. i. 1¹⁴—(iv)
 religious-practice.
 धर्मधर्मिव्यवहार II. ii. 24²²—dealings based upon relation of
 attributes to substance.
 धर्माधर्मौ II. i. 34¹³—merit and demerit.
 धर्मावुष्ठान II. i. 1⁵⁹—religious-practice.
 धारणा II. i. 3¹¹—steady-concentration.
 नामधेय II. i. 14¹¹—name, designation.
 नामरूप II. i. 14¹⁴⁸—name and form.
 निग्रहीतृत्व II. i. 34²⁶—function of meting out punishments.
 निमित्त II. i. 1⁵⁸—[valid] ground; II. ii. 5³—(ii) inducing-cause.

निमित्तकारण II. i. 4¹—efficient-cause.

निमित्तनैमित्तिकभाव II. i. 15⁵—relation of [efficient] cause to its effect.

नियन्तृत्व II. i. 1²—function of controller.

नियमकारण II. i. 8⁶—restraining cause or regulating principle.

नियमहेतु II. ii. 17⁵⁷—ground for restriction.

नियामक II. ii. 12³¹—regularising-cause.

निरञ्जनज्ञान II. ii. 42⁸—stainless knowledge.

निरतिशय II. i. 4³²—not liable to accretion or depletion of attributes.

निरन्वय II. ii. 22¹¹—leaving no trace behind.

निरपेक्ष II. i. 1⁹⁷—not contingent upon anything ; irrespective of consideration for ; also *under* वाक्यनिरपेक्ष.

निरवयव II. i. 26⁶—partless ; impartite.

निराकरण II. i. 3²¹—refutation ; way out of a difficulty.

निरात्मिक II. i. 18³⁵—without substantiality.

निरालम्बता II. ii. 29¹⁵—devoid of real basis.

निरुपाय्य II. i. 18¹⁴—(i) indescribable ; void of characterisation ; II. ii. 22¹²—(ii) leaving no vestige behind.

निरोध II. ii. 20, 22—sublation ; also *under* अप्रतिशब्दानिरोध, प्रतिशब्दानिरोध.

निर्जर II. ii. 33²—drying-up.

निर्गुण II. i. 1⁴¹—free-from-qualities.

निर्णयकारण II. i. 1⁶³—determining ground.

निर्धारण II. ii. 33¹⁸—determinate-knowledge ; ascertainment.

निर्विशेष II. ii. 26¹²—void of attributes.

निवृत्तिनिष्ठ II. i. 3⁴¹—cultivating renunciatory attitude.

निश्च्रेयस II. i. 3²⁷—(i) highest-goal ; II. i. 5²²—(ii) pre-eminence.

निष्कल II. ii. 6¹³—partless.

निष्ठा II. i. 15¹⁸—ultimate-stay-and-support ; goal, culmination.

नैरात्म्यवाद II. ii. 35²²—doctrine of soulless-ness.

न्याय II. i. 1⁶—(i) logic ; (ii) maxim or rule : namely—

अन्धपद्गु[न्याय] II. ii. 7¹⁻² ;

अन्धपरंपरान्याय II. ii. 30⁵ ;

अनागतसंबन्धादतीतसंबन्धो बलवान्[न्याय] II. i. 36¹⁴ ;

अपवादाभावे उत्सर्गप्रसिद्धि[न्याय] II. ii. 31¹² ;

आकाशघटाकाशन्याय II. i. 22¹⁷ ;

उपक्रमे संदिग्धार्थवाक्यस्य तच्छेषान्विध्वय[न्याय] II. i. 17⁹ ;

कार्यकारणानन्यत्वन्याय II. i. 4⁴⁶ ;

कुण्डबदर[न्याय] II. ii. 17⁶⁸ ;

तन्तुपटन्याय II. ii. 12¹⁵ ;

दृष्टाच्चादृष्टसिद्धि[न्याय] II. ii. 2⁶ ;
 प्रधानमल्लनिवर्हणन्याय II. i. 12⁵ ;
 फलवत्संनिधौ अफलं तदङ्गम् [न्याय] II. i. 14¹³¹ ;
 बीजाङ्कुरन्याय II. i. 35⁸ ;
 संवेष्टितप्रसारितपटन्याय II. i. 19⁷ ;
 समुद्रतरङ्गादिन्याय II. i. 13²⁸ ;
 सिकताकूप[न्याय] II. ii. 32² ;
 स्थूपानिखननन्याय II. i. 34¹ ;
 स्रोतःसंताननित्यतान्याय II. ii. 35²⁰ ;
 स्वामिश्रित्यन्याय II. i. 4²⁹.

न्यायविद् II. ii. 37²⁴—expert in Nyāya.

न्यायाभास II. i. 1⁷—fallacious dialectics.

पञ्चस्कन्धी II. ii. 18¹³—pentad of agglomerated thought-phases.

पञ्चात्मक II. ii. 11⁵¹—possessing a five-fold constituency.

परिग्रह II. i. 1⁵³—(i) acceptance; II. i. 4³¹—(ii) paraphernalia.

परिच्छिन्न II. i. 8¹—finite or limited; also *under* इयत्तापरिच्छिन्न.

परिच्छेद II. i. 14¹⁵⁹—limitation, characterisation.

परिच्छेद्य II. ii. 28¹⁰—what is signified, denoted or demarcated.

परिणाम II. i. 4³⁸—modification.

परिणामप्रक्रिया II. i. 14¹⁷⁹—mode-of-explanation according to modification-theory.

परिनिष्पन्न II. i. 6²⁵—(i) accomplished existential-entity; II.

ii. 20⁶—(ii) having fully-evolved individuality.

परिभाषा II. ii. 13¹⁵—technicality.

परिमण्डल II. ii. 11²¹—infinitesimally-spherical.

परिमितत्व II. ii. 1⁴⁵—discreteness or finiteness.

परिशुद्धि *under* शास्त्रार्थपरिशुद्धि.

परिहार II. i. 9²¹—refutation; way out of a contingency.

परिस्पन्दित II. ii. 3⁸—[smallest] movement.

पर्यायेण II. ii. 10²³—(i) alternately; II. ii. 35—(ii a) turn-by-turn; (ii b) through continuity.

पाञ्चभौतिक II. ii. 11⁵⁴—constituted out of five elements.

परिमण्डल्य II. ii. 11¹⁰—infinitesimal-sphericity.

पुद्गल II. ii. 19—body.

पुरुषतन्त्र II. i. 27³⁴—depending upon individual's will.

पुरुषार्थ II. i. 1¹⁷—(securing) goals of mankind.

प्रकृति II. i. 4¹—(i) constituent cause; also *under* प्रकृतिविकारभाव;
 II. i. 14¹⁴⁶—(ii) cosmic root-cause.

प्रकृतिविकारभाव II. i. 4¹⁷—relation of cause and effect.

प्रक्रिया II. ii. 11¹—system; mode-of-explanation.

प्रचय II. ii. 11³⁸—loose-texture.

प्रणिधान *under* ईश्वरप्रणिधान.

प्रतिघात II. ii. 34¹¹—resistance ; also *under* अप्रतिघात.

प्रतिज्ञा II. ii. 21—solemn assertion ; accepted-dogma.

प्रतिपत्ति II. i. 5³⁰—(i) acknowledging ; II. i. 14⁸⁹—(ii) attainment ; II. ii. 63⁷—(iii) understanding ; II. ii. 25—(iv) recognitive-consciousness.

प्रतिबोधन II. i. 21⁵—awakening of consciousness.

प्रतिषेध II. i. 7—negative-statement ; also *under* विधिप्रतिषेधशास्त्र.

प्रतिसंख्यानिरोध II. ii. 22—conative-sublation.

प्रतिसंधान II. ii. 25—(i) consciousness of identity ; II. ii. 31⁴—(ii) evoking and joining together.

प्रतीति II. i. 18³⁰—perception.

प्रतीत्य II. ii. 21³—after having been conjointly operated upon.

प्रत्यय II. ii. 28²³—(i) perception ; also *under* प्रत्ययवैचित्र्य ; II. ii. 19¹¹—(ii) cause ; also *under* इतरेतरप्रत्ययत्व.

प्रत्ययवैचित्र्य II. ii. 28²³—variety in perceptions.

प्रत्याख्यान II. i. 3¹—refutation, repudiation.

प्रत्यायितव्यपक्ष II. ii. 33³²—dogma deserving credence.

प्रत्यासाप्ति II. i. 3³⁵—context.

प्रथिमा II. ii. 34¹³—grossness.

प्रधान II. i. 4⁴²—(i) principal or dominant ; also *under* गुण-प्रधानभाव ; II. ii. 3²—(ii) [Sāṃkhya] First Principle.

प्रधानमङ्गनिवर्हणन्याय *under* न्याय.

प्रबोध II. i. 9²⁶—waking-condition.

प्रभव II. i. 1⁴⁶—source.

प्रमाण II. i. 1⁵⁴—authoritative ; valid-proof.

प्रमाणप्रमेयप्रमातृप्रमितिषु II. ii. 33²¹—in regard to means-of-knowledge, objects-of-knowledge, agent-of-knowledge, and resulting-knowledge.

प्रमाणप्रमेयफललक्षण II. i. 14⁷¹—falling into categories of means, objects, and fruit of knowledge.

प्रमाणप्रमेयफलव्यवहार II. ii. 27⁵—worldly-experience consisting of means, objects, and result of cognition.

प्रमाणप्रवृत्त्यप्रवृत्तिपूर्वक II. ii. 28⁴⁹—contingent upon operation and non-operation of valid-proofs.

प्रयोजन II. ii. 6⁵—motive.

प्रयोजनवत्त्व II. i. 32—purposiveness.

प्रलय II. i. 1⁴⁶—dissolution.

प्रवर्तक II. ii. 2⁴⁶—causing activity.

- प्रवर्तनव्यापार II. ii. 7⁸—guiding-activity.
 प्रवर्तना II. ii. 37²³—activity, conation.
 प्रवर्त्यप्रवर्तयिवृत्त्व II. ii. 37²⁰—functioning as the motivated and the motivating principle.
 प्रवृत्ति II. i. 14³¹—activity; also *under* प्रमाणप्रवृत्त्यप्रवृत्तिपूर्वक.
 प्रवृत्तिविवेक II. ii. 31²—operative-phase of consciousness.
 प्रवृत्तिशक्ति II. ii. 7¹—power of movement.
 प्रवृत्तिसातत्य II. ii. 12³¹—ever-continuousness of movement.
 प्रवृत्त्याश्रय II. ii. 2¹¹—substratum of activity.
 प्रव्रज्या II. i. 3¹¹—renouncing household.
 प्रसङ्ग II. i. 1¹¹—contingency; also *under* अतिप्रसङ्ग.
 प्राज्ञ II. i. 23⁷—(i) Highest-Self; II. ii. 29¹⁴—(ii) wise person.
 प्राणायाम II. i. 20¹—breath-control.
 प्राप्तिसहित II. i. 7⁷¹—lacking probatory-force.
 प्रेक्षा II. ii. 1²⁶—intelligent supervision.
 फल II. i. 14⁸³—fruit, reward, result; also *under* प्रमाणप्रमेय-फलक्षण, प्रमाणप्रमेयफलव्यवहार, हेतुफलभाव.
 फलवत्संनिधौ अफलं तदङ्गम् [न्याय] *under* न्याय.
 बाधकज्ञान II. i. 14¹⁶⁷—knowledge negating [an earlier one],
 बीजाङ्कुरन्याय *under* न्याय.
 बुद्धान्त II. i. 6¹⁴—true-nature of waking-life.
 बुद्धिबोध्य II. ii. 22¹—cognisable by mind.
 बुद्धिसंतान II. ii. 25²¹—flux of the mind.
 ब्रह्मात्मताप्रतिबोध II. i. 14¹³—awakening of the consciousness of Brahman as one with self.
 भव II. ii. 19⁴—hereditary-momentum.
 भाव II. ii. 22⁸—individual-entity.
 भावना II. ii. 1⁴²—emotional-attitude.
 भावयाथात्म्य II. i. 11²⁸—actual reality as it is.
 भावात्मना II. ii. 26¹⁸—in proper existential form.
 भूतभौतिकसंहति II. ii. 18¹⁸—conglomeration of elements and elemental[-products].
 भेद II. ii. 1²⁰—discrete-existence, individual-object.
 भेदव्यवहार II. i. 22²⁰—dualistic dealings in phenomena.
 भोग II. ii. 6⁸—pleasure-pain experience.
 भौतिक II. ii. 15³—elementals; also *under* भूतभौतिकसंहति.
 मन्त्र II. i. 5²⁴—Vedic text, hymn, incantation.
 मात्रा II. ii. 6¹¹—form.
 माया II. i. 14¹⁴⁶—cosmic-illusion.
 मायावेश II. ii. 2²⁹—infusion of cosmic-illusion.

मीमांसा II. i. 37⁹—exposition; exegetics.

मूर्त्युपचय II. ii. 1,⁷—growth in bulk.

मोक्ष II. ii. 1¹⁸—liberation.

याथात्म्य *under* अर्थयाथात्म्य, भावयाथात्म्य.

युक्ति II. i. 18—reasoning.

युतसिद्ध II. ii. 17³²—proved capable of separated existence.

योग II. ii. 42¹⁴—devout-meditation.

रचना II. ii. 1—design-and-arrangement.

राद्धान्त II. ii. 18¹—theory.

लिङ्ग II. i. 6²⁶—(i) inferential-mark ; II. i. 3²³—(ii) [specific] reference [in scriptures].

लोकयात्रा II. ii. 18²⁰—mundane-existence.

लोकन्यवहार II. i. 11¹³—worldly-dealings.

वस्तुतन्त्र II. i. 11³¹—referring to existing-reality.

वस्तुवृत्त II. i. 14¹²—nature of reality.

वाक्यनिरपेक्ष II. ii. 1¹⁸—without appeal to scriptures.

वाक्यशेष II. i. 17²⁰—latter-part or conclusion of a text.

वाचारम्भण II. i. 14¹¹—word-initiation.

वासक II. ii. 28⁶⁶—[subliminal-impression] colouring the idea of next moment.

वासना II. ii. 28²⁷—latent or subliminal-impression.

वासनाधान II. ii. 31⁴—implanting of subliminal-impressions.

वासनावैचित्र्य II. ii. 30¹—variety of subliminal-impressions.

वासनाश्रय II. ii. 30¹²—substratum for subliminal-impressions.

वास्य II. ii. 28⁶⁶—[idea of following moment] coloured by the subliminal-impression of the preceding moment.

विकरण II. i. 31¹—divied of organs

विकार II. i. 4¹⁷—effect, modification ; also *under* प्रकृतिविकारभाव.

विक्रिया II. i. 14¹²⁰—modification.

विज्ञान II. ii. 28⁶⁷—idea; also *under* आल्यविज्ञान, प्रवृत्तिविज्ञान.

विज्ञानवादिन् II. ii. 28²—one maintaining doctrine of Idealism.

विज्ञानसाक्षिन् II. ii. 28⁷⁸—apperceiving agent [of the ideas].

विज्ञानास्तित्वमात्रवादिन् II. ii. 18⁵—one maintaining the reality of only the ideas.

विज्ञानैकस्कन्धवाद II. ii. 28⁴—doctrine of [the reality of] only the phases-of-ideas.

विधान II. i. 1¹⁵—ritual.

विधिप्रतिषेधशास्त्र II. i. 14⁶⁶—science of injunctions and prohibitions; scriptural prescriptions as to what should and what should not be done.

विपर्यय II. ii. 15—reversal [of nature].

विप्रकर्ष II. i. 1⁹⁸—further-estrangement from; also *under* स्वभाव-विप्रकर्ष.

विप्रतिपत्ति II. i. 1⁵³—conflict; difference-of-views; divergence-of-teaching.

विप्रयोग II. ii. 29¹¹—non-contiguity.

विप्रलम्भकत्व II. i. 6⁴⁸—deceptive nature.

विभ्रुति II. i. 25¹³—miraculous-object.

क्लिक्षणत्व II. i. 4—disparity-in-nature.

विवर्तते II. ii. 1²⁵—evolves diversely.

विवसन II. ii. 33¹—the undressed; gymnosophist.

विशेष II. ii. 10¹³—(i) attributes; II. ii. 17⁴—(ii) particularity.

विशेषण II. ii. 28⁵⁷—differentiating-attribute.

विशेष्य II. ii. 28⁵⁷—subject to which attributes refer.

विषयावयविभाव II. ii. 10⁹—relation of object and subject.

विषयसारूप्य II. ii. 27¹⁵—assuming same form as the object.

विसंवाद II. ii. 42⁶—divergence.

विसृष्टि II. i. 6³⁷—creation.

वृत्ति II. i. 11¹⁵—denotation; significance.

वैनाशक II. ii. 18⁷—nihilist; also *under* अर्थवैनाशक.

वैनाशकतन्त्रव्यवहार II. ii. 32³—dealings in nihilistic philosophy.

वैलक्ष्य II. i. 11⁵—difference.

वैलक्षण्य II. ii. 2¹²—difference; distinctness-in-nature.

वैश्वलक्ष्य II. 1⁶⁵—extreme-divergence-in-form.

वैषम्य II. i. 34—inequality[-of-dispensation]; also *under* गुणवैषम्य.

वैषम्योपगमयोग्य II. ii. 9⁵—liable to assume state-of-uneven-poise.

व्यतिरेक II. ii. 4—distinctness; also *under* अन्वयव्यतिरेक.

व्याक्ति II. i. 18³¹—species; the individual.

व्यतिरेकाव्यतिरेकादाविकल्प II. ii. 28⁵³—alternatives such as distinctness or non-distinctness.

व्यपदेश II. i. 31—designation; also *under* अभिमानव्यपदेश.

व्यपश्रय II. i. 1⁶¹—depending-upon; subsisting-in; resorting-to.

व्यवहार II. ii. 1¹¹—phenomenal-dealings; also *under* प्रमाणप्रमेय-फलव्यवहार, धर्मधर्मिव्यवहार, भेदव्यवहार, लोकव्यवहार, वैनाशकतन्त्र-व्यवहार.

व्याकरण II. i. 14¹³⁸—unfolding.

व्याकृत II. i. 17—evolved.

व्याघात II. i. 14⁶⁷—impediment; coming-to-nought.

व्यापार II. i. 18²⁶—function or operation; also *under* कारकव्यापार, प्रवर्तनव्यापार.

- व्यावहारिक II. i. 14¹—ordinary; phenomenal.
 व्युदास II. i. 1⁸³—refutation or repudiation.
 व्यूह II. ii. 42⁹—mode or form.
 शब्दकोप II. i. 26¹⁵—vitiation of scriptural-statements.
 शरीर(क) II. i. 14⁴¹—embodied-self; individual soul.
 शाश्वतिक II. i. 1⁴⁹—possessing-eternality.
 शास्त्रार्थपरिशुद्धि II. i. 26²—probing of ascertained-conclusion of the scriptures.
 शिष्ट II. i. 1¹¹—one of position-and-competence, or one entitled-to-respect.
 षडायतन II. ii. 19⁴—sense-sexet.
 संवर II. ii. 33²—inlet-closing.
 संवेष्टितप्रसारितन्याय *under* न्याय.
 संश्लेष II. i. 13¹⁶—(i) contact ; II. ii. 17⁶¹—(ii) cohesion.
 संसर्ग II. ii. 1⁴³—cohesion.
 संस्कार II. ii. 21⁶—(i) composite-thing; II. ii. 30¹⁰—(ii) latent-disposition or subliminal-impression.
 संस्थान II. ii. 17¹¹—(i) posture ; II. ii. 17⁷⁰—(ii) specific state-of-existence.
 संहतत्व II. ii. 10³⁸—connection.
 संहार II. i. 1⁴⁴—sublation or dissolution.
 संहति *under* धृतभौतिकसंहति.
 संघात II. ii. 33³⁹—conglomerate or conglomeration.
 सत्कार्यवादिन् II. i. 7³—one maintaining [prior-to-production] existence of effect [in the cause].
 सत्संपत्ति II. i. 27¹¹—merging-back-into the Existent.
 संतान II. ii. 22⁸—stream [of momentary-existences]; also *under* बुद्धिसंतान.
 संतानिन् II. ii. 22⁸—individual-constituent of the stream.
 गौनकर्ष II. i. 18²⁰—perceptive-contact ; also *under* इन्द्रियगौनकर्ष.
 गौनाधि II. ii. 7⁹—contiguity.
 रासभङ्गीनय II. ii. 33⁷—Logic of Seven Modes.
 समन्वय II. i. 1⁵—concensus.
 समय II. ii. 19⁶—convention, tradition, canon.
 समवाय II. i. 18¹³—intimate-relation ; inherence.
 समवायिन् II. i. 18¹³—intimately-related object.
 समाधि II. i. 1³²—(i) rejoinder ; II. i. 9³⁵—(ii) Yogic-trance.
 समानन्याय II. i. 3¹—application of the same reasoning ; parity of reasoning ; analogy or identity in principle.
 समावर्तन II. i. 1¹⁶—return [home after completion of study]

- समुदाय II. ii. 18—aggregate.
 समुद्रतरङ्गादिन्याय *under* न्याय.
 संप्रतिपन्न II. i. 3¹⁷—acceptable,
 संप्रतिपत्ति II. i. 3¹⁹—acceptability.
 संप्रतिष्ठा II. i. 36²⁰—stay, support.
 संप्रदाय II. i. 9²⁹—traditional-teaching.
 संप्रयोग II. ii. 29¹¹—contiguity.
 संप्रसाद II. i. 9²⁶—deep-sleep condition ; sound-sleep.
 संबन्धसातत्य II. ii. 12³¹—ever-continuousness of relation.
 सम्यग्दर्शन II. i. 1¹⁹—right knowledge.
 सर्ग II. i. 1⁴⁴—creation.
 सर्गशक्ति II. ii. 6¹¹—power to create or evolve.
 सर्वशून्यत्ववादिन् II. ii. 18⁵—one maintaining that all is void.
 सर्वात्मता II. i. 1¹¹—oneness of the self within all.
 सर्वास्तित्ववादिन् II. ii. 18—¹one maintaining reality of everything.
 सहकार II. ii. 6¹—co-operating-cause.
 सहोपलम्भानेयम् II. ii. 28¹⁷—invariable [rule] as to simultaneous rising-up.
 साक्षिन् *under* विज्ञानसाक्षिन्.
 सातत्य *under* प्रवृत्तिसातत्य, संबन्धसातत्य.
 सादृश्य II. ii. 25¹⁷—similarity.
 साधनसामग्री II. i. 24¹³—aggregation of causal auxiliaries.
 साधारणकारण II. i. 34¹⁵—common-cause.
 साध्यपक्षनिक्षिप्त II. ii. 3⁹—falling under the category of what is yet-to-be-proved.
 सापेक्ष II. i. 1⁵⁹—(i) contingent upon ; II. i. 34—(ii) showing [due] consideration for.
 सामानाधिकरण्य II. i. 18⁹⁰—co-ordination or sameness of cause-relation.
 सामान्य II. i. 23¹—(i) common characteristic or essence ; II. ii. 17¹—(ii) generality or generic-nature.
 सामान्यलक्षण II. ii. 28⁶⁵—generic-knowledge-factor.
 सामान्यात्मक II. ii. 15³¹—possessing generic-nature.
 साम्यावस्था II. ii. 2¹—state-of-equipoise.
 साहचर्य II. i. 6¹¹—similarity or sameness-of-nature ; also *under* विषयसाहचर्य.
 सावकाश II. i. 1¹⁴—possessing-a-scope.
 सिक्ताकूप [न्याय] *under* न्याय.
 सिद्ध II. i. 6³³—(i) one who has attained perfect vision ; II. i. 20⁶—(ii) established ; also *under* अयुतांसिद्ध, यतसिद्ध.

सिद्धि II. i. 1⁵⁹—perfection.

स्कन्ध II. ii. 18¹⁰—thought-phases; also *under* विज्ञानैकस्कन्धवाद.

स्थितिकारण II. i. 1²—cause of stability.

स्थूणानिखननन्याय *under* न्याय.

स्वप्नान्त II. i. 6⁴¹—true-nature of sleep.

स्वभावावप्रकर्ष II. i. 6¹⁰—diversity in nature.

स्वरूपानुपमर्द II. i. 28¹—without violating the real nature of.

स्वरूपोपमर्द II. ii. 26²⁰—[antecedent] dissolution of nature.

स्वलक्षण II. ii. 28⁶⁵—[factor] giving specific individuality.

स्वसंवेदन II. ii. 28⁶³—bringing [themselves] into consciousness.

स्वाध्याय II. ii. 42¹¹—recitation [of names-and-prayers].

स्वाभाविकी II. i. 9³⁵—(i) natural, spontaneous or innate; II. i. 14⁷³ —(ii) what is one's by right.

स्वामिभृत्यन्याय *under* न्याय.

स्वराज्य II. i. 1⁷⁶—Self-empire.

स्रोतःसंतर्नानत्यतान्याय *under* न्याय.

हान *under* अभ्युपेतहान.

हेतु *under* उर्पात्तिहेतु.

हेतुफलभाव II. ii. 20⁴—relation of cause and effect.

हेतुस्वभावानुपस्क II. ii. 20⁹—not-imbued with causal character.

हेतुहेतुमद्भाव II. i. 35⁸—relation of cause and effect.

BRAHMASŪTRAS II. I-II

WITH

THE COMMENT OF ŚĀṆKARA

NOTES

ADHYĀYA SECOND

PĀDA FIRST

—A Sūtra is defined as—

स्वल्पाक्षरमसंदिग्धं सारवद्विश्वतोमुखम् ।

अस्तोभमनवद्यं च सूत्रं सूत्रविदो विदुः ॥

“ A statement of few words, free from doubt, conveying an important sense, having a universal application, free from padding words (such as we find in certain Vedic litanies) and free from any blemish (grammatical or logical).” The sūtras were concise mnemonic rules originally intended as helps to memory and possibly designed to cover deficiency of writing material. There are Śrauta, Gṛhya and Dharma sūtras, sūtras of Vyākaraṇa, Chhandas, Nāṭya and Alamkāra, and sūtras for the various Darśanas or Systems of Philosophy. In time the sūtras tended to become more and more condensed and even enigmatic, so that the taunt—

अर्धमात्रालाघवेन पुत्रोत्सवं मन्यन्ते वैयाकरणाः ।

was taken as a deserved compliment. Some of the later pseudo-sūtras, however, were written in a diffuse style, thereby defeating their original purpose. The sūtra form of literature as devoted to the codification of religious and secular law and the condensing of various Śāstric subjects must have been fairly established even before the rise of Buddhism and Jainism, seeing that the canonical texts of these religions are designated as “suttas” though their outward form has none of the characteristics of a sūtra proper. The sūtras must have been from the very beginning accompanied by an oral traditional explanation.

—A Bhāṣhya or comment is defined as—

सूत्रार्थो वर्ण्यते यत्र वाक्यैः सूत्रानुसा(का)रिभिः ।

स्वपदानि च वर्ण्यन्ते भाष्यं भाष्यविदो विदुः ॥

The Bhāshya thus shares the dignity and precision of the sūtra. It makes brief statements which it itself proceeds to explain and expand according to the needs of the discussion. An imaginary disputant is the person to whom the Bhāshya is directly addressed.

—One or more continuous sūtras form an Adhikaraṇa or topic. The largest number of sūtras subsumed under one topic in the Vedānta sūtras is, according to Śāṅkarācārya's Bhāshya, 17. An Adhikaraṇa is thus defined—

विषयो विशयश्चैव पूर्वपक्षस्तथोत्तरम् (रः) ।

निर्णयश्चेति पञ्चाङ्गं शास्त्रेऽधिकरणं स्मृतम् ॥

The five members of an Adhikaraṇa are : i, Vishaya or general subject-matter ; ii, Viśaya or Saṁśaya, the specific occasion for doubt ; iii, the *prima facie* view taken by the opponent, who is thus called the Pūrvapakṣin or Chodaka, the starter of the query ; iv, the Uttarāṇ, rejoinder, or the Uttarāḥ (pakṣaḥ), otherwise called the Siddhānta, representing the view maintained by the Siddhāntin in opposition to the view of the Pūrvapakṣa ; and v, Nirṇaya or ultimate decision after a weighing of the two views by arguments for and against. This is given by the judge or the chairman or the Madhyastha (non-partisan) arbitrator and it is on the side of the Siddhāntin. In theory every Adhikaraṇa ought to be capable of being presented in this five-fold division, although the best illustrative examples of them occur in the first Adhyāya and in portions of the third and the fourth) where the question is that of mīmāṃsā or exact interpretation of a given Vedic text open to divergent interpretations.

—While it was regarded as the duty of the Bhāshyakāra to fully explain the intention of the Sūtrakāra, he had also full latitude to start new “utsūtra” discussions, i. e., those not actually expressed in the sūtras but capable of being deduced from them, or at any rate not inconsistent with the implications of them. But he could not modify the sūtras. This latter was the function of the so-called Vārttikas, which are defined as—

उक्तानुक्तदुष्कानां चिन्ता यत्र प्रवर्तते ।

तं ग्रन्थं वार्त्तिकं प्राहुर्वार्त्तिकज्ञा मनीषिणः ॥

The Vārttikas, in other words, were sūtras intended to correct, modify, and supplement the original sūtras. We have no Vārttikas for the Vedāntasūtras as such, although the sūtrapāṭha as given by Śaṅkara, Rāmānuja, Madhva, Vallabha, and other Bhāṣyakāras shows considerable variation and addition.

—The 556 (555) sūtras given by Śaṅkarāchārya are held to have been the work of Bādarāyaṇa (also called Vyāsa). Whether he is the actual author of these aphorisms, or whether the sūtrapāṭha, like a family-book of the Rīgveda, is made of chronologically disparate units, is a question that we need not take up here for the present. Consult on the point my Basu Mallik Lectures on Vedānta Philosophy, Lecture IV.

—Sūtra 1, line 1. — Śaṅkarāchārya himself reviews (apud I. iv. 1 and I. ii. 1) the contents of the first four pādas of the first chapter in the following words—

प्रथमे पादे ब्रह्मजिज्ञासां प्रतिज्ञाय ब्रह्मणो लक्षणमुक्तम्—जन्माद्यस्य यतः (१.१.२) इति । तल्लक्षणं प्रधानस्यापि समानमित्याशङ्क्य तद-शब्दत्वेन निराकृतम्—ईक्षतेर्नाशब्दम् (१.१.५) इति ॥ अर्थान्तर-प्रसिद्धानां च केषांचिच्छब्दानां ब्रह्मविषयत्वे हेतुप्रतिपादनेन कानिचिद्वाक्यानि स्पष्टब्रह्मलिङ्गानि संदिह्यमानानि ब्रह्मपरतया निर्णीतानि । पुनरप्यन्यानि वाक्यान्यस्पष्टब्रह्मलिङ्गानि संदिह्यन्ते, किं परं ब्रह्म प्रतिपादयन्त्या-होस्विदर्थान्तरं किंचिदिति । तन्निर्णयाय द्वितीयतृतीयपादौ ॥ चतुर्थे पादे कासुचिच्छाखासु श्रूयमाणानां प्रधानसमर्पणाभासानां शब्दानामन्यपरत्वं प्रतिपादितम् ॥

The title "Samanvaya" or "oneness of purport" given to the first Adhyāya is thus fully justified.

—Sūtra 1, line 2. — The mṛit or clay forms the material cause (upādāna) of the jar, while the potter is the agent (nimitta). In the case of the universe the Brahman is both the upādāna and the nimitta (efficient) cause *in one*. Compare Br. Sū. I. iv. 23 and II. i. 4, lines 1f. below.

—Sūtra 1, line 4. — The four classes of beings are: jāraja or jarāyuja (viviparous or born of womb), andaja (oviparous or born of egg), svedaja (born of sweat), and udbhijja (born after

tearing up the soil). The bodies of these, after being separated from the immortal soul that temporarily inhabits them, "return to dust." See Manusmṛiti, i. 43 ff.—

पशवश्च मृगाश्चैव व्यालाश्चोभयतोदतः ।
 रक्षांसि च पिशाचाश्च मानुषाश्च जरायुजाः ॥
 अण्डजाः पक्षिणः सर्पा नका मत्स्याः सकच्छपाः ।
 यानि चैवंप्रकाराणि स्थलजन्यौदकानि च ॥
 स्वेदजं दंशमशकं यूकामक्षिकमत्कुणम् ।
 उष्मणश्चोपजायन्ते, यच्चान्यत् किञ्चिदीदृशम् ॥
 उद्भिज्जास्तरवः सर्वे बीजकाण्डप्ररोहिणः ।
 ओषध्यः फलपाकान्ता बहुपुष्पफलोपगाः ॥

—Sūtra 1, line 6. — Smṛitinyāyavirodhaparihāra is the topic of the first pāda : the smṛitivirodha occupying sūtras 1-3 and perhaps sūtra 12 also, the nyāyavirodha being answered in the rest of the sūtras. Pāda 2 attacks the various Darśanas or Systems of Philosophy on their own grounds. The remaining two pādas of the chapter try to establish a unity of purport in the apparently divergent and inconsistent cosmological and psychological speculations of the several Vedāntic texts. The title "Avirodha" or "absence of contradiction" given to this chapter is thus quite adequate, at any rate for pādas 1, 3 and 4. As to pāda 2, see the introduction of Śaṅkarācārya to II. ii. 1, and our note thereon. — The word nyāya here denotes arguments based on grounds of reason alone and not claiming any scriptural or traditional authority. It is almost synonymous with *tarka* (II. i. 11), *yukti* (II. i. 18), or *upapatti* (II. i. 36-37). Compare the similar use of *tarka-smarana* in II. i. 3⁴². Nyāya does not here denote Nyāyadarśana.

—Sūtra 1, line 11. — Is Śaṅkarācārya here by the words "Smṛitiś cha Tantrākhyā" referring to an actual Sāṅkhya work? The context makes it clear that by "Paramarshi" he intends Kapila, the founder of the Sāṅkhya system, whose sage-like vision is extolled by the Veda. The earliest extant Sāṅkhya work—the Sāṅkhyakārikās of Īśvarakṛiṣṇa—speaks of a "Tantra" in the following words (Kārikā 70)—

एतत् पवित्रमग्र्यं मुनिरासुरयेऽनुकम्पया प्रददौ ।

आसुरिरपि पञ्चशिखाय, तेन बहुलीकृतं तन्त्रम् ॥

“Pañchaśikha expanded (or gave increased vogue) to the ‘Tantra’.”—This would imply either that the work that reached Pañchaśikha through Kapila and Āsuri was already known as a Tantra, or that it was originally known by some other name, Pañchaśikha’s expanded form being for the first time called Tantra. Now, a work known as “Shashtītantra” or the “Tantra of the Sixty” is mentioned by name in Kārikā 72—

सप्तत्यां किल येऽर्थास्तेऽर्थाः कृत्स्नस्य षष्टितन्त्रस्य ।

आख्यायिकाविरहिताः परवादविवर्जिताश्चेति ॥

Īśvarakṛishṇa here tells us that his seventy kārīkās are an exact epitome of the larger work named the Shashtītantra. A verse expressly as from the Shashtītantra, and also as from Bhagavān Vārshaganya, is preserved, viz.—

गुणानां परमं रूपं न दृष्टिपथमृच्छति ।

यत् तु दृष्टिपथं प्राप्तं तन्मायैव सुतुच्छकम् ॥

But a Chinese tradition speaks of Pañchaśikha as being the author of the Shashtītantra. A number of citations (about 20) from Pañchaśikha have been preserved; but they are all in prose. Since the existence of the Shashtītantra as an actual Sāṃkhya work is undeniable, we have therefore to fall back upon the supposition either that the ascription of this work to the authorship of Vārshaganya (or to that of Pañchaśikha) is false, or else, with Dr. F. Otto Schrader (ZDMG, LXVIII, pp. 101ff.) believe in the existence of two Shashtītantras, one in prose and the other in verse, one theistic and the other atheistic. This reduplication is however a counsel of despair. It merely proves confusion in tradition. Witness in proof the following verses quoted as from Padmapurāṇa—

कपिलो वासुदेवाख्यः सांख्यं तत्त्वं जगाद ह ।

ब्रह्मादिभ्यश्च देवेभ्यो भृग्वदिभ्यस्तथैव च ॥

तथैवासुरये सर्ववेदार्यैरुपबृंहितम् ।

सर्ववेदविरुद्धं च कपिलोऽन्यो जगाद ह ॥

That Śaṅkarācārya therefore had access to definite Sāṅkhya works no longer available to us has in any case to be admitted, although all his citations invariably come from the Sāṅkhya-kārikās of Īśvarakṛishṇa. In II. i. 1, line 95 below, he appears to have used the word *tantra* in the sense of system.

—Sūtra 1, line 14. — Jaimini (Mīmāṃsāsūtra I. i. 2) defines Dharma as—

चोदनालक्षणोऽर्थो धर्मः ।

Chodanā or scriptural injunction is thus explained by Śabara in his Bhāshya on the above sūtra—

‘ चोदना ’ इति क्रियायाः प्रवर्तकं वचनमाहुः । चोदना हि भूतं भवन्तं भविष्यन्तं सूक्ष्मं व्यवहितं विप्रकृष्टमित्येवंजातीयकमर्थं शक्नोत्यवगमयितुम् । यत्किञ्चन लौकिकं वचनं—यथा नद्यास्तीरे फलानि सन्ति—इति तत् तथ्यमपि भवति, वितथ्यमपि भवति । नच—स्वर्गकामो यजेत—इत्यतो वचनात् संदिग्धमवगम्यते, भवति वा स्वर्गो, न वा भवतीति । विप्लवते हि खल्वपि कश्चित् पुरुषकृताद्वचनात् प्रत्ययः, नतु वेदवचनस्य मिथ्यात्वे किञ्चन प्रमाणमस्ति । तस्माच्चोदनालक्षणोऽर्थः श्रेयस्करः ॥

— Sūtra 1, line 17. — The “Puruṣhārthas” are four : Dharma, Artha, Kāma and Moksha. The first three require that *specific acts* be performed in a specific manner by the properly qualified persons : and the detailed instructions concerning these can be had from texts like the Manusmṛiti, which can accordingly have some use at least, and so be sāvakāśa. The fourth “Puruṣhārtha” depends upon our getting correct knowledge, i.e., knowledge corresponding to the Reality, and this is not a matter for action or prescription. The nyāya applied in the present case by the Pūrvapakshin is—

सावकाशनिरवकाशयोर्निरवकाशं बलीयः ।

—Sūtra 1, line 21. — The argument from “seeing” takes its stand upon passages like—

सदेव सोम्येदमग्र आसीदेकमेवाद्वितीयम् । तदैक्षत बहु स्यां प्रजायेयेति । तत् तेजोऽसृजत ।

—छान्दोग्य ६.२.१-३;

आत्मा वा इदमेक एवाग्र आसीत् । नान्यत् किञ्चन मिषत् । स ईक्षत
लोकान् नु सृजा इति । स इमां लोकान्सृजत । —ऐतरेय १.१.१.

The passages imply that the Creator was sentient and capable of reflection, and not *inert* like the Sāṅkhya Pradhāna.

—Sūtra 1, line 27. — The full stanza from the Śvetāśvatara is—

यो योनिं योनिमधितिष्ठत्येको विश्वानि रूपाणि योनीश्च सर्वाः ।

ऋषिं प्रसूतं कपिलं यस्तमग्रे ज्ञानैर्विभर्ति जायमानं च पश्येत् ॥

The context makes it clear that the topic in the passage is Īśvara or Lord, the Creator. Kapila (like the *yonis* or receptacles) is mentioned only incidentally. As Śāṅkarācārya later explains (II. i. 1⁷¹) the “darśana” or revealed text is “anyārtha” or has another than Kapila as its *principal* topic. The stanza has therefore no “prāpti” or relevancy in connection with the greatness of Kapila. Furthermore, texts like—

यो देवानां प्रभवश्चोद्भवश्च विश्वाधिपो रुद्रो महर्षिः ।

हिरण्यगर्भं जनयामास पूर्वं स नो बुद्ध्या शुभया संयुक्तु ॥

—श्वेताश्वतर ३.४;

यो देवानां प्रभवश्चोद्भवश्च विश्वाधिपो रुद्रो महर्षिः ।

हिरण्यगर्भं पश्यत जायमानं स नो बुद्ध्या शुभया संयुक्तु ॥

—श्वेताश्वतर ४.१२;

यो ब्रह्माणं विदधाति पूर्वं यो वै वेदांश्च प्रहिणोति तस्मै ।

तं ह देवमात्मबुद्धिप्रकाशं मुमुक्षुर्वै शरणमहं प्रपद्ये ॥

—श्वेताश्वतर ६.१८;

make it quite clear that the “Kapila” or the tawny-coloured being is to be identified with Hiraṇyagarbha, the Demiurge or the Brahmadeva who, himself the off-spring of the Eternal All-creator, creates the subsequent creation.

Sūtra 1, line 37. — For “Kshetrajña” compare the Bhagavadgītā (Xiii. 1ff) —

इदं शरीरं कौन्तेय क्षेत्रमित्यभिधीयते ।

एतद्यो वेत्ति तं प्राहुः क्षेत्रज्ञ इति तद्विदाः ॥

क्षेत्रज्ञं चापि मां विद्धि सर्वक्षेत्रेषु भारत ।

—Sūtra 1, line 45. — Śāṅkarāchārya must have derived the passage from some Purāṇa. It also occurs in the Mahābhārata. There are many passages which are common to the Epic and to more than one Purāṇa. Hari Dikshita in his Brahmasūtravṛtti (Ānand. ed., No. 82) says that it comes from the Vishṇu-purāṇa.

—Sūtra 1, line 54f. — The third pāda of the first adhyāya of Jaimini's Mīmāṃsāsūtras discusses what we can take as authoritative besides Scriptural injunctions. The first two sūtras —

धर्मस्य शब्दमूलत्वादशब्दमनपेक्ष्यं स्यात् ॥ १.३.१ ॥

अपि वा कर्तृसामान्यात् प्रमाणमनुमानं स्यात् ॥ १.३.२ ॥

answer the Pūrvapaksha view that every statement not coming directly from the Veda is to be discarded (or rather, secondarily interpreted), by arguing that even non-scriptural statements can be authoritative inasmuch as they emanate from sages having similar infallible knowledge ; and we can always infer that, corresponding to the smṛiti in question, there was once a śruti text which happens not to have been preserved. The sūtra quoted in the Bhāshya limits the application of this conclusion. It is not every smṛiti text that we can pronounce authoritative. When a given smṛiti text runs counter to an existing śruti text, the smṛiti text has to be subordinated. It is only where the smṛiti does not go against a definite śruti text that we can accept it as authoritative and *infer* the existence of a lost original as the ground of its ultimate validity. — Jaimini goes on to further limit the scope of this procedure. A smṛiti might not go against the śruti and yet might prescribe a course of worldly prudence or something the motive for which is too obvious. From a text regarded as an authority in the matter of Dharma we expect directions regarding something which ordinary uninspired reason cannot lay down. — And yet again not every smṛiti can be accepted as authority which, without clashing with existing śrutis, teaches something apūrvā or extraordinary. Certain heretics might promise wonderful things to be enjoyed after death by those who follow their specific practices. But these heretic smṛitis cannot be authoritative, because the followers of Vedic religion and people of approved respectability—the śiṣṭas—spurn those practices. Practices universally followed by śiṣṭas we can always

take as our guide, even where not only the śruti but even the smṛiti text prescribing them is absent. From śiṣṭāchāra we can infer smṛiti, and from smṛiti the corresponding śruti — At the same time, however, we can learn something even from heretics and Mlechchhas, especially where the ordinary sources of knowledge fail us. As Śabara says—

चोदितमशिष्टैरपि शिक्षानवगतं प्रतीयेत । यत् प्रमाणेनाविरुद्धं तदव-
गम्यमानं न न्याय्यं त्यक्तुम् ।

This shows how logical and broad-minded these ancient Bhāṣhyakāras were—so different from some of their mediæval successors.

—Sūtra 1, line 59 ff.— We go to scriptures only in matters where ordinary avenues of knowledge fail us ; and this is true as much of the prescriptions intended to secure the first three Purushārthas as of the knowledge of the Reality which is to win the moksha, the fourth purushārtha. The Reality, the knowledge of which gives moksha, transcends the ordinary gateways of knowledge, is transphenomenal. In the absence of special merit or divine grace none can attain that knowledge. The special merit that secures unimpeded vision one can accumulate by following specified courses of conduct such as are prescribed in the scriptures. Thus—

Scriptures lay down prescriptions;
Prescriptions lead to merit;
Merit secures transphenomenal knowledge.

Now this transphenomenal knowledge, as being the product of the already existing and authoritative injunctions of the scriptures, cannot go against their teaching. Nor can it claim to be the sole guide in the interpretation of the scriptural prescriptions. This is the gist of the argument. As will be seen, it involves a fallacy. The atIndriyavijñāna or transphenomenal knowledge would not of course be justified in asserting that *the particular prescription* which secured that knowledge was false. But *other* prescriptions can well come under the purview of the adept's unimpeded vision. In fact he would be better placed than the mere layman in interpreting the other scriptures aright. To this it is of course possible to make the rejoinder by urging that there cannot be any "ardhajaratiyatva" or half-hearted attitude as regards

“Śrutiprāmānya”. To concede the prāmānya of one text is to concede the prāmānya of all texts. But this is not a very satisfactory attitude to take. Hence perhaps Śaṅkarāchārya, conceding the justice of our seeking the guidance of the perfect sages in interpreting the scriptures, brings in the ultimate argument as to difference amongst the Doctors themselves.

—Sūtra 1, line 70. — Compare Mahābhārata (Kumbh. Ed.) iii. 107. 2 ff.—

ततः ऋद्धो महाराज कपिलो मुनिसत्तमः ।

वासुदेवेति यं प्राहुः कपिलं मुनिपुंगवम् ॥

स चक्षुर्विकृतं कृत्वा तेजस्तेषु समुत्सृजन् ।

ददाह सुमहातेजा मन्दबुद्धीन् स सागरान् ॥

—Sūtra 1, line 72. — The scriptural passage extolling Manu has this advantage over the Kapila passage that it is unambiguous and purports *primarily* to praise Manu. Hence its cogency (prāpti) in the argument before us. On the other hand the primary topic in the Kapila passage is the Lord, referred to by the relative pronoun “yah.” That the passage, besides its assertion about the main topic, should also be made to convey information about an additional subordinate topic (e. g., wisdom of Kapila) involves what is called Vākya-bheda, or the splitting up of one sentence into two, which is a fault in interpretation.

—Sūtra 1, line 97. — That the authoritativeness of the Veda is self-evident, not deducible from extraneous confirmatory proofs, is the well-known “svataḥ-prāmānya” theory, which constitutes the corner-stone of the Pūrvamīmāṃsā system. Opposed to that is the “parataḥ-prāmānya” Theory, which is willing to concede the correctness of even an ordinary sense-perception of water only after it is tested by a subsequent confirmatory perception, as when the man actually goes to the water and is able to quench his thirst. But this amounts to summoning one sense-perception as witness for the truth of another sense-perception. Why may not both be wrong? And if the second is to be believed in, why not as well believe the first? In fact, argues the Mīmāṃsist, one’s faith is not a thing to be argued about. If that were so, it would have been easy to argue all into, or out of, any faith. All attempts therefore to lend additional support to Scriptures by

ratiocination have everywhere ended by undermining men's faith in the Scriptures themselves. Hence the dictum—

विभेत्यल्पश्रुताद्वेदो मामयं प्रतरिष्यति ।

—Sūtra 2, line 2. — The words of the sūtra are variously interpreted. Śaṅkara, Bhāskara, and Vallabha agree in taking " itareshām " to mean " itareshām Mahadādīnam tattvānām. " Madhva does the same : only, the smṛiti he particularly alludes to is the Śaiva or Pāsupata smṛiti, and consequently the tattvas are not Mahat and others but incidental statements regarding fruits etc., taught in the Śaiva texts and not warranted by (Vaishṇava) experience. Rāmānuja, Nimbārka, and Śrīkanṭha understand " itareshām " to refer to other Smṛitikāras (like Manu), whose prophetic vision (upalabdhi) never once vouchsafes for the correctness of the Sāṃkhya view of creation. But this is saying what was already said in sūtra 1, viz., that the Smṛitis of Kapila and of Manu differ in their teachings. Looking to the wording of sūtras 1 and 2 it is clear that " itareshām " can refer only to the " Smṛitis " or the " doshas. " The first is impossible grammatically, since we read " itareshām " and not " itarāsām. " The second can possibly mean : " Other defects urged by the Sāṃkhyas (against the Vedāntic position) are untenable "—an extremely forced interpretation. If the word " Smṛiti " in sūtra 1 is to mean " Pradhāna smṛiti ", Śaṅkara's interpretation would seem most natural. For Rāmānuja's interpretation " smṛiti " will have to be taken to signify " Kapila-smṛiti. " If a word not present in the first sūtra is to be referred to by the " itareshām " of the next sūtra, the fact can possibly become more natural if, following Vallabha, sūtra 2 is taken to constitute a distinct adhikaraṇa, although that does not very much improve matters.

—Sūtra 2, line 5.— All systems of Indian Philosophy agree in giving the number of sense-organs as five. If a new system were to assert a sixth sense contrary to all authority and unwarranted by actual experience, there could be no possibility whatsoever of that system gaining a hearing.

—Sūtra 2, line 6.—The word *mahat* actually occurs in the following Upanishadic passages—

इन्द्रियेभ्यः परा ह्यर्था अर्थेभ्यश्च परं मनः ।

मनसस्तु परा बुद्धिर्बुद्धेरात्मा महान् परः ॥

महतः परमव्यक्तमव्यक्तात् पुरुषः परः ।

पुरुषान्न परं किञ्चित् सा काष्ठा सा परा गतिः ॥—कठ १.३.१०-११

इन्द्रियेभ्यः परं मनो मनसः सत्त्वमुत्तमम् ।

सत्त्वादधि महानात्मा महतोऽव्यक्तमुत्तमम् ॥

अव्यक्तात्तु परः पुरुषो व्यापकोऽलिङ्ग एव च ।

यज्ज्ञात्वा मुच्यते जन्तुरमृतत्वं च गच्छति ॥ —कठ २.३.७-८.

Śāṅkarācārya has attempted to prove that by the word *mahat* we have to understand either the cosmic intellect alias the Demiurge (Hiraṇyagarbha) or the individual soul, but in no case the Mahat of the Sāṅkhya system, i. e., as the first product of the Prakṛiti.

—Sūtra 2 line 1.— Śāṅkarācārya's point is that if the smṛiti teaching creation has gone wrong about the later stages of the creation, it can be presumed to be no more correct as to the initial stage or the starting point of the creation. If the effect, Mahat, is disproved, the cause, Pradhāna, has also to be discarded.

—Sūtra 3, line 1.— The specific mention of the Yoga in this sūtra implies that the first adhikaraṇa dealt with the allied system of the Sāṅkhyas, and not that of the Pāsupatas, as Madhva understands. Yoga is called "Śeśvara-Sāṅkhya."

—Sūtra 3, line 2.— An atideśa or analogical transference of qualities, conditions or arguments is thus defined—

अन्यत्नैव प्रणीतायाः कृत्स्नाया धर्मसंहतेः ।

अन्यत्र कार्यतः प्राप्तिरतिदेशः स उच्यते ॥

—Sūtra 3, line 5.— Ignoring their nebulous beginning (according to Hauer : *Die Anfänge der Yoga-praxis*, 1922) in the Vedas, the Yoga ideas first make their appearance, amongst the Upanishads, in the Kāṭha and the Śvetāśvatara, and also here and

*This line might have been an interpolation, the "yat" of the third line referring to "avyakta." Translators often translate as though they read *yam* for *yaj*. The description of the Puruṣa as "vyāpaka" and "aliṅga" is reminiscent of Sāṅkhya technicalities : Cp. S. Kārikā 55.

there in the *Mundaka*. As a recognised method of securing concentration of the mind with a view to God-vision, it is much earlier than the *Yogasūtras* of Patañjali (150 B. C.): it is even pre-supposed by Buddhism (500 B.C.). The “*Yogaśāstra*” from which Śaṅkarāchārya is apparently quoting (line 16) the first *sūtra* is otherwise unknown to us.

—*Sūtra* 3, line 18. — In his German translation of the *Brahma-sūtras* published in 1887, Deussen took “*Ashtakādi-smṛiti*” to mean Pāṇini’s *Ashtādhyāyī* [*Achtwerke des Pāṇini*]—an error which we ought to ignore in the case of this pioneer and pre-eminent Vedāntic scholar of Europe. The *Ashtakas* are kinds of śrāddhas so called because they were to be performed on three successive *kṛishṇa-ashtamīs* following the *Agrahāyaṇī* or *Mārgaśīrṣhī Paurṇamāsī*. Compare *Manusmṛiti*, IV. 150. There is no extant Vedic prescription about them, but on the strength of the *smṛitis* the corresponding *śruti* passages have to be inferred. The *Ashtakā-smṛiti* is here adduced as an illustration of its “*anapavadanīyatva*,” and not of its “*sampratipannārthaikadeśatva*.”—The reading *abhyadhikā* for *apyadhikā*, given in some Mss., is perhaps to be preferred in view of line 4 above.

—*Sūtra* 3, line 23. — Śabara defines *līṅga* (III. iii. 14) as—

यत् तावच्छब्दस्यार्थमभिधातुं सामर्थ्यं तल्लिङ्गम् ।

Elsewhere it is defined as—

सामर्थ्यं सर्वभावानां लिङ्गमित्यभिधीयते ।

A *śrauta līṅga* means actual ‘usage’ of a word in the *Veda* in the sense of the thing in question. This use of the word *līṅga* here is to be distinguished from its more usual use in the sense of an “inferential mark” as in II. 1. 6²⁶, II. 1. 11²⁹, etc.; and from its *Sāṅkhya* use in the sense of the transmigratory body (cp. S. *Kārikās* 40-41).

—*Sūtra* 3, line 35. — The “*pratyāsatti*,” proximity, or passage in immediate context to *Śvetāśvatara* vi. 13, is—

एको वशी निष्क्रियाणां बहूनामेकं बीजं बहुधा यः करोति ।

तमात्मस्थं येऽनुपश्यन्ति धीरास्तेषां सुखं शाश्वतं नेतरेषाम् ॥

—श्वेताश्वेतर ६.१२.

The word "Sāṅkhya" means etymologically—

संख्या बुद्धिः, तन्निवृत्तं सांख्यम् ।

—Sūtra 3, line 39. — Compare—

तस्माच्च विपर्यासात् सिद्धं साक्षित्वमस्य पुरुषस्य ।

कैवल्यं माध्यस्थ्यं द्रष्टृत्वमकर्तृभावश्च ॥ —सांख्यकारिका १९.

—Sūtra 3, line 41. — Vairāgya is defined in Yogasūtra, i. 15—

दृष्टानुश्रविकविषयवितृष्णस्य वशीकारसंज्ञा वैराग्यम् ।

and thus recommended in Yogasūtra, ii. 15—

परिणामतापसंस्कारदुःखैर्गुणवृत्तिविरोधाच्च दुःखमेव सर्वं विवेकिनः ।

Compare also Yogasūtra, ii. 30.

—Sūtra 4, line 5. — According to the mīmāṃsā view the Veda is "kriyārtha" only :—

आम्नायस्य क्रियार्थत्वादानर्थक्यमतदर्शानाम्.।—जै० १.२.१.

It teaches what ought, and what ought not to be, *done* for obtaining certain rewards and averting certain punishments after death ; and as to the exact nature of the act in question, Veda is, and can be, the only and the final authority. According to the Vedāntins a part of the Veda at any rate describes the nature of the Brahman, the highest Reality. Now, if Brahman be an eternally existing Reality, and not a process or action which is to be brought into operation, it must be within the reach of pramāṇas like Pratyaksha, or of Anumāna which is based on Pratyaksha, which both concern themselves with the knowledge of the reality. If so, the Veda ought never to describe the reality in a manner opposed to ordinary Pratyaksha and Anumāna. And if certain passages seem to go *prima facie* against the testimony of the senses, we ought to interpret them differently. As Śaṅkarāchārya says elsewhere (Gītābhāshya under xviii. 67)—

प्रत्यक्षादिप्रमाणानुपलब्धे हि विषयेऽग्निहोत्रादिसाध्यसाधनसंबन्धे श्रुतेः प्रामाण्यम्, न प्रत्यक्षादिविषये, अदृष्टदर्शनार्थत्वात् प्रामाण्यस्य । न हि श्रुतिशतमपि शीतोऽग्निरप्रकाश इति ब्रुवत् प्रामाण्यमुपैति । यदि ब्रूयाच्छीतोऽग्निरप्रकाशो वेति तथाप्यर्थान्तरं श्रुतेर्विवक्षितं कल्प्यम्, प्रामाण्यान्यथानुपपत्तेः, न तु प्रमाणान्तरविरुद्धं स्ववचनविरुद्धं वा ॥

—Sūtra 4, line 9. — The Pūrvapakshin further maintains that in obtaining the knowledge of an existential reality Śruti and Pratyaksha—and therefore Anumāna as being based on Pratyaksha, and so having a more intimate linkage with reality than is possible for mere Śruti—are not “tulyabala” or of equal value and importance, but the latter is distinctly on a higher plane by its very intimate connection with reality. If the aim of Śruti is to give the direct knowledge of reality, we cannot then ignore these two pramāṇas which have such a vital contact with reality.

—Sūtra 4, line 22f. — The Prakṛiti or Pradhāna of the Sāṃkhyas is constituted of three guṇas,—Sattva, Rajas and Tamas,—which are thus described (Sāṃkhyakārikā, 3)—

सत्त्वं लघु प्रकाशकमिष्टमुपष्टम्भकं चलं च रजः ।

गुरु वरणकमेव तमः, प्रदीपवच्चार्थतो वृत्तिः ॥

“Sattva is regarded as buoyant and effulgent, Rajas as stimulating and mobile, Tamas as heavy and overwhelming; like (the wick and oil of) a lamp, their function is for one (common) purpose, viz., giving light, (although they are opposed in nature).” Compare also the Bhagavadgītā (xiv. 6-8)—

तत्र सत्त्वं निर्मलत्वात् प्रकाशकमनामयम् ।

सुखसङ्गेन बध्नाति ज्ञानसङ्गेन चानघ ॥

रजो रागात्मकं विद्धि तृष्णासङ्गसमुद्भवम् ।

तन्निबध्नाति कौन्तेय कर्मसङ्गेन देहिनम् ॥

तमस्त्वज्ञानजं विद्धि मोहनं सर्वदेहिनाम् ।

प्रमादालस्यनिद्राभिस्तन्निबध्नाति भारत ॥

Because everything in the world is capable of itself having—or at any rate capable of exciting in the individual—under differing conditions, the physical qualities of buoyancy and so forth, the ethical qualities of purity and so forth, the intellectual qualities of clearness and so forth, or the hedonistic qualities of happiness and so forth, the Sāṃkhyas argue that everything must be ultimately composed of Sattva, Rajas and Tamas. As Vāchaspatimīśra says in his commentary on the Sāṃkhyakārikā above quoted—

तद्यथा एकैव स्त्री रूपयौवनकुलशीलसंपन्ना स्वामिनं सुखाकरोति । तत् कस्य हेतोः । स्वामिनं प्रति तस्याः सुखरूपसमुद्भवात् । सैव स्त्री सपत्नी-
र्तुःखाकरोति । तत् कस्य हेतोः । ताः प्रति तस्या दुःखरूपसमुद्भवात् । एवं
पुरुषान्तरं तामविन्दमानं सैव मोहयति । तत् कस्य हेतोः । तं प्रति तस्या
मोहरूपसमुद्भवात् । अनया च स्त्रिया सर्वे भावा व्याख्याताः ॥

—Sūtra 4, line 27 ff. — For “kāryakaraṇa” (not kāraṇa) in the sense of “ body and the senses ” compare (Śvetāśvatara vi. 8)—

न तस्य कार्यं करणं च विद्यते न तत्समश्चाभ्यधिकश्च दृश्यते ।
परास्य शक्तिर्विविधैव श्रूयते स्वाभाविकी ज्ञानबलक्रिया च ॥

—Sūtra 4, line 31. — It is to be noted that “Buddhi” is regarded by the Śāṅkhyas as “achetana” or non-sentient. Whatever, like the mind and the intellect, serves as a means to an end, viz. as a means to knowledge, and whatever is capable of motion (as the mind) and growth (as the intellect), cannot be self-subsisting entity like the Puruṣa. Activity involves change, and hence and Śāṅkhyas have denied all activity to the Puruṣa. Even knowledge through the ordinary gateways of the senses involves an activity which the manas and the buddhi can undertake, but never the Puruṣa. He can have an intuitive perception—a sort of an illumination by mere presence—of the whole process; and therein alone lies his chetanā or sentient character. In this view of the achetana character of the Buddhi the Vedāntin agrees with the Śāṅkhyas.

—Sūtra 4, line 35 ff. — The objection on the score of vilakṣaṇatva can be removed by taking (i) the achetana Pradhāna as the cause of the achetana world, or (ii) the chetana Brahman as the cause of the chetana world. It is the latter alternative which is now being considered in the rest of this sūtra and the next.

—Sūtra 5, line 16 — The word “viśeṣa” in the sūtra Śāṅkarāchārya takes in two ways: (i) difference [between bhoktrī and bhogya and (ii) specific mention, as in the Kaushitaki version of the story concerning the “Dispute of the Faculties.”

—Sūtra 5, line 24. — Mantras, defined as—

प्रयोगसमवेतार्थस्मारकाः मन्त्राः ।

are those groups of vocables—not necessarily possessing any meaning, or any meaning connected with the ritual to accompany which they are recited—which invariably remind us, through constant association, of the various entities, objects, or utensils that are employed in the ritual. The majority of the Mantras come from the Vedic Saṁhitās. An Arthavāda is defined as—

प्राशस्त्यनिन्दान्यतरपरं वाक्यमर्थवादः ।

Its function is (i) to praise a given prescription, e. g.—

वायव्यं श्वेतमालमेत भूतिकामः ।वायुर्वै पिष्टा देवता ।

where the praise of the Wind as most swift serves as a recommendation for the offering of a white (animal) to that God; (ii) to censure a prohibited conduct, e. g.—

बहिषि रजतं न देयम् ।अश्रुजं हि रजतम् ।

where the gift of silver is prohibited and the prohibition emphasised by telling us that silver sprang from the tears (of Rudra or Agni in the form of lightning); (iii) to describe the doings of another (parakṛitih); and (iv) to narrate the happenings of another time (purākalpaḥ). Arthavāda has three varieties—

विरोधे गुणवादः स्यात्, अनुवादोऽवधारिते ।

भूतार्थवादस्तद्धानादर्थवादस्त्रिधा मतः ॥

The corresponding illustrations are—

आदित्यो यूपः—गुणवादः,

because the statement contradicts Pratyaksha ;

अग्निर्हिमस्य भेषजम्—अनुवादः,

because Veda here affirms what is otherwise known ;

इन्द्रो वृत्राय वज्रमुदयच्छत्—भूतार्थवादः,

because it neither confirms nor contradicts. — The Arthavāda, be it noted, is not an independent authority. It is always subservient to another injunctive or prohibitive statement. As Jaimini says (I. ii. 7)—

विधिना त्वेकवाक्यत्वात् स्तुत्यर्थेन विधीनां स्युः ।

The "Arthavāda" in the present passage would include the majority of the Brāhmaṇas. Itihāsa (iti + ha + āsa = thus it was) includes all collections of stories and legends such as those in the Mahābhārata: while the normal contents of a Purāṇa embrace all topics from Creation to Dissolution:

सर्गश्च प्रतिसर्गश्च वंशो मन्वन्तराणि च ।

वंशा(स्या)नुचरितं चैव पुराणं पञ्चलक्षणम् ॥

—Sūtra 5, line 31. — This is not an actual quotation from Br̥h., but the topic is dealt with in the passage referred to.

—Sūtra 6, line 3 ff.— A somewhat longer list of this type is given by Keśava Kāśmīrin in his com. on the text—

दृश्यते हि विलक्षणयोरपि कार्यकारणभावः । यथा भुक्तादन्नात् केश-
नखादिरूपस्य विलक्षणस्य, गोमयाच्च वृश्चिकस्य, मक्षिकादिभ्यः कृम्यादेः,
द्रव्याद्गुणादेः, शृङ्गाच्छरस्य, दावान्निदग्धकदलीकाण्डाद्वेत्राङ्कुरस्य, श्वमस्त-
कोत्तगोधूमयावनालादेः पलाण्डुलशुनाङ्कुरस्य कार्यस्योत्पत्तेरुपलम्भात् ॥

—Sūtra 6, line 15 f.— World, the product, is alleged to be different in nature from Brahman the cause: Is it intended to assert that not even one attribute of Brahman is to be found in the world (second paksha); or, even though some one attribute like sattā may be common to the two, chetanatva, the most important attribute, is present in the cause and absent in the effect (third paksha); or that each and every attribute of Brahman without exception is not found in its effect the world (first paksha)? The first paksha assumes that cause and effect must agree in every single respect, which is impossible. The second paksha goes against facts. The third paksha can be exhibited thus—

प्रतिज्ञा—जगत् अब्रह्मप्रकृतिकम् ।

हेतुः (लिङ्गम्)—अचेतनत्वात् (चैतन्येनानन्वितत्वात्) ।

दृष्टान्तः—यच्चैतन्येनानन्वितं तदब्रह्मप्रकृतिम्, यथा (!)

No dṛiṣṭānta, which is defined as—

लौकिकपरीक्षाणां यस्मिन्नर्थे बुद्धिसाम्यं स दृष्टान्तः ।

and which has to be acceptable to both the parties, can be given, and so the argument falls down.

—Sūtra 6 line 43 ff. — The valid reasonings conformable to the Scriptures are : (i) that the conditions and presentations belonging to the dream consciousness and of the waking consciousness, although associated with one and the same soul, do not either of them constitute his real nature, as the soul can do away with each in turn. — This is rather defective. You can say of a wall that is repainted that the old blue colour does not constitute the essence of the wall any more than the new green colour : but *some* sort of a colour the wall must have. Similarly, some kind of a relation there must be between consciousness and the soul, even though it be that of *tādātmya* or identity, as the *Advaita Vedānta* avers. Hence we have to supplement argument (i) by argument (ii) which tells us that the real essence of the soul's nature is to abide unruffled by the phenomenal world. This raises the inevitable question as to how the phenomenal appearance does appear at all. Argument (iii) which denies any distinction between the world and the Brahman, the phenomenon and the noumenon, seeks to answer the question, although the answer may not be equally convincing to all.

—Sūtra 6 line 45f. — Śaṅkarāchārya has made the Sūtrakāra argue that Brahman has produced a world which seems to exhibit certain attributes absent in the Brahman, and also that Brahman = world. This seems to contain a *prima facie* inconsistency which we will have to comment upon later. For the present be it noted that he does not speak of —“ jagad-brahmanor aikyam ” nor of “ brahmanah jagad-avyatirekah ” but of “ jagataḥ brahmāvyatirekah ”. As he ultimately wants to raise the world to the level of the Brahman, he thinks it necessary to put in a word for the “ eka-deśīya,” who, after all, is “ sva-yūthya ” or belonging to the Āchārya's own persuasion. Whether Śaṅkara has in view here any particular school of thought, or is merely putting forth a possible position that can be maintained, is more than what we know.

—Sūtra 6 line 53. — According to the Sāṃkhyas, the world, the product, is “ jada,” but so also is Pradhāna. What they cannot explain is the bifurcation of the product-world by the Śruti itself into classes like *sat* and *asat*, *viñāna*, and *aviñāna*, *satya* and *anṛita*. *Viñāna* in the bifurcation cannot mean the soul or *Puruṣa* who according to the Sāṃkhyas is not an entity that can

be produced : but as contrasted with *avijñāna*, *viññāna* must signify a sentient product, and therefore must have a sentient cause from which alone it can spring, and not a non-sentient cause like *Pradhāna*.

—*Sūtra* 7, line 3. — The objection raised against the Vedāntins in this *sūtra* is distinct from that of the last three *sūtras*, although a corollary from it. Some *Bhāṣhyakāras* (e. g., *Vallabhāchārya*) commence a new *adhikaraṇa* with *sūtra* 7; others (e. g., *Śrīkaṇṭha*) with *sūtra* 8; *Madhvāchārya*, however, is most peculiar in making *sūtras* 4 to 12 into four distinct *adhikaraṇas*, adding an extra *sūtra*, “*Dṛśyate tu*” between our *sūtra* 4 and *sūtra* 5, and reading our *sūtra* 6 with a “*cha*” instead of the “*tu*”. His interpretation of the various *sūtras* is also peculiar to him. The other commentators agree as to the general drift of the *adhikaraṇa*. It is *sūtra* 7 which has given rise to differences of interpretation. *Vallabha* makes the *sūtra* refer to *Chhāndogya Upanishad* vi. 2. 1-2:—

सदेव सोम्येदमग्र आसीदेकमेवाद्वितीयम् । तद्वैक आहुरसदेवेमग्र आसी-
देकमेवाद्वितीयं, तस्मादसतः सदजायत ॥ १ ॥ कुतस्तु खलु सोम्यैवं स्यादिति
होवाच, कथमसतः सज्जायेतेति । सत् त्वेव सोम्येदमग्र आसीदेकमेवा-
द्वितीयम् ॥ २ ॥

and says that the *sūtra* rebuts the argument that the “*asat*” (= *Pradhāna*) is the cause of the world, because the *Śruti* passage asserts the “*asat*” just to deny it forthwith. This interpretation of *Vallabha* is open to the objection that even the *Pūrvapakshin* would not be so blind to the words of the *Śruti* as to rear up on their basis the *Pūrvapaksha* at all; and further the proper explanation of the passage ought to have been given in the first or the *Samanvaya* chapter and not here. — *Rāmānuja*, *Nimbārka*, and *Śrīkaṇṭha* make the “*pratishedha*” refer to that implied in *sūtra* 6, where the rule “*like cause like effect*” was denied; but the denial leaves room for the cause and the effect being of one substance—

दृश्यते तु—इति सूत्रमुपादानोपादेययोः सालक्ष्यनियमप्रतिषेधमात्रपरम्,
न त्वेकद्रव्यत्वप्रतिषेधपरमपि ।

Śaṅkarāchārya takes the “pratiśhedha” to be that implied in the Pūrvapaksha of this very sūtra, “asad iti.” To the objection: “But then the kārya will become ‘asad’ prior to creation,” the reply is—“Your contingency as to the ‘non-existence’ of kārya is like the contingency of the ‘non-existence’ of the hare-horn or the barren-woman’s son, as when somebody takes the trouble to formally deny this in a sentence like—The hare-horn (or the barren-woman’s son) does not exist. This cannot be taken to imply that the hare-horn (or the barren-woman’s son) once did exist, but now no longer does so. If kārya never truly exists apart from the kāraṇa, both before and after the creation, the objection that kārya will become ‘asad’ is no objection at all. It is the mere verbal denial of the ‘existence’ of a thing that never really exists by itself. Śaṅkarāchārya’s interpretation, subtle as it is, points to the illusory character of the world, while Rāmānuja and others imply the reality of the world and its unity in substance with the Brahman, as well as difference in minor attributes. The following extract from the Bhāmati brings out the exact point intended by Śaṅkarāchārya—

कार्ये स्वरूपेण सदसत्त्वाभ्यां न निर्वचनीयम्, अपि तु कारणरूपेण
शक्यं सत्त्वेन निर्वक्तुम् । एवं कारणसत्तैव कार्यस्य सत्ता, न ततोऽन्या,
इति कथं तत् उत्पत्तेः प्राक् सति कारणे भवत्यसत् ॥

—Sūtra 8, line 5. — The word “tadvat” in the sūtra is interpreted in five different ways, viz.—

- (i) कारणस्य कार्यवत्प्रसङ्गः । (ii) भोक्तृभोग्ययोरन्यतरस्य इतरवत्प्रसङ्गः ।
- (iii) मुक्तामुक्तयोरन्यतरस्य इतरवत्प्रसङ्गः । (iv) अपीतौ स्थितिवत्प्रसङ्गः ।
- (v) कार्यस्य कारणवत्प्रसङ्गः ।

—Sūtra 9, line 9. — Chaturvidho bhūtagrāmaḥ : see our Note on II. i. 1, line 4, above.

—Sūtra 9, line 11 f. — The familiar lines from Śaṅkarāchārya’s Shaṭpadi-stotra might be recalled—

सत्यपि भेदापगमे नाथ तवाहं न मामकीनस्त्वम् ।
सामुद्रो हि तरङ्गः कचन समुद्रो न तारङ्गः ॥

The point is that *kārya* and *kāraṇa* are not co-terminus. *Kāraṇa* includes the *kārya* and transcends it. See below, II. i. 27, lines 3ff.

—Sūtra 9, line 23ff. — The majority of the older Upanishads do not contain the “vivarta” illustrations that Śāṅkarāchārya adds here to the usual “pariṇāma” illustrations that are the current coin of the Upanishadic texts. Hence perhaps the Bhāshyakāra finds it necessary to invoke the aid of Gaudapāda, who is traditionally known as his “parama” guru or the teacher’s teacher (or possibly the founder of the school). Some scholars are inclined to doubt the existence of an actual teacher called “Gaudapāda” in view of the fact that there is found at times a mention of “Gaudāchāryāḥ” or “Gaudāḥ” or “Gaudīyakārikāḥ,” which might signify a Gauda or Bengal school of Vedāntins, whose tenets are contained in the so-called “Gaudapāda” *kārikās*. These *kārikās* show a strong influence of Buddhism and are frequently quoted in Buddhist commentaries of the Mahāyāna school (e. g. Bhāvaviveka, cir. 600 A.D.) and that too at dates which raise a suspicion as to the traditional ascription of the *kārikās* to a writer of the early decades of the eighth century, as Śāṅkarāchārya’s teacher’s teacher must be supposed to be. We will not discuss here this intricate problem in all its bearings, and we will ignore the question as to whether the first prakaraṇa of the Gaudapādiya *kārikās* (which is commented upon even by non-Advaita commentators like Kūranārāyaṇa) belongs to an author different from that of the later prakaraṇas. The problem has been dealt with by me in my fifth Basu Mallik Lecture, Poona, 1929. Śāṅkarāchārya is often nicknamed crypto-Buddhist or “prachchhanna-Bauddha” for his Māyāvāda, which has certain affinity to the Śūnyavāda of the Madhyamika school of Nāgārjuna; and now it would seem that this title belongs to Śāṅkarāchārya’s spiritual prāchārya, Gaudapāda,—unless we argue (what is very probable) that Buddhism and Vedānta (and even Sāṅkhya for the matter of that) arose out of a philosophical Anschauung or view-point which contained in it germs of both the nihilistic and illusionistic philosophies; or, failing this, are content to hold (what is also just possible) that Gaudapāda purposely used Buddhist arguments against Buddhism itself, and established a new philosophy, more or less allied to Buddhism, which Śāṅkarāchārya later adopted after him.

—Sūtra 9, line 35. — The word “svābhāvika” or “svābhāviki” Śaṅkarācārya uses sometimes in the sense of what is truly real, but sometimes also in the sense of what is natural and normal and therefore *not* truly real. Here of course the first sense is intended. See also II. i. 14, line 46 and line 73.

—Sūtra 9 line 45. — If, as Śaṅkarācārya argued above (line 20), *kārya* is non-different from *kāraṇa* in all the three times alike, wherein does the *Pralaya* state differ from the *Sthiti*? We cannot say that there is *avidyā* in the latter but not in the former ; for we have just argued (line 36, 44) that the seeds of *avidyā* are dormant in the un-liberated soul, and hence there is no confusion between the liberated and the un-liberated souls. We can perhaps say that in the *Apiti* or *Pralaya* state the *avidyā* is in a seed-form and there it no *consciousness* of it, whereas in the *Samsāra* or *Sthiti* state the *avidyā* is in its developed condition, putting forth all the false appearances that we know. As Śaṅkara expressly says in his *Bhāṣhya* to I. iii. 30—

प्रलीयमानमपि चेदं जगच्छक्त्यवशेषमेव प्रलीयते । शक्तिमूलमेव च
प्रभवति । इतरथाकस्मिकत्वप्रसङ्गात् ॥

—Sūtra 10, line 12. — The rule is (Śloka-vārttika, p. 341)—

यत्रोभयोः समो दोषः परिहारोपि वा समः ।

नैकः पर्यन्योक्तव्यस्तादृगर्थविचारणे ॥

—Sūtra 11, line 3. — Compare the *Vākyapadīya* of Bhartṛhari (i. 34)—

यत्नेनानुमितोऽप्यर्थः कुशलैरनुमातृभिः ।

अभियुक्ततरैरन्यैरन्यथैवोपपाद्यते ॥

—Sūtra 11, line 8. — *Kaṇabhuk*, or more usually *Kaṇāda*, the founder of the *Vaiśeṣika* Philosophy, may have obtained his name from the fact that his philosophy deals with atoms or “*kaṇas*,” but more probably from the circumstance of his having belonged to a sect of ascetics who lived on “*kaṇas*” or grains left in the field after the harvest was gathered and taken home. This mode of life is known as the “*uñohhavṛitti*.” It is supposed that the founder practised this mode of life in order to propitiate

God Maheśvara, who, in the form of an owl or "ulūka," revealed this philosophy to him, hence called the Aulūkya darśana. But this tradition must have been of a secondary origin, as the primitive Vaiśeṣhika did not recognise God. Another tradition explains the name "Owl Philosophy" from the circumstance that the founder, in the day-time, meditated in a dense forest, secluding himself from wordly affairs, and at night, when people went to rest, he wandered about for food. Young women were frightened at his appearance, and this gave the night-wanderer the opportunity to enter into the granaries and mills and eat the corn found there. None of these traditions have any historical value.

—Sūtra 11, line 13 f.—The same sentiment is well expressed in the Rīgveda (vii. 58 3c)—

गुतो नाध्वा वि ति¹राति जन्तुम् ।

—Sūtra 11, line 15. — Vṛtti is the denotative power (or Śakti) of a word or a sentence. It is Abhidhā or primary, Lakṣhaṇā or secondary (figurative), and Vyañjanā or suggestive. Just which of these is to be understood in a given word, or sentence (which is a specific group of words) can only be settled by argumentation or ratiocination. The whole of Pūrvamīmāṃsa is just such a rational science of exegesis.

—Sūtra 11, line 28. — Bhāva-yāthātmya. The corresponding Buddhistic expression is " Dharmatathatā."

—Sūtra 11, line 30. — The word " avimokṣa " in the sūtra is interpreted in two ways : (i) non-release from the deficiency inherent in reasoning ; and (ii) non-liberation from the bondage of Samsāra.

—Sūtra 11, line 41 ff. — To the expected retort that there is wrangling enough amongst the expositors of the Vedic Philosophy, who thus are not in a better boat than the avowedly Rationalistic Philosophers, the reply given is that the Veda is eternal and not the product of any specific time author or conditions — like the Sāṃkhya Philosophy. Its teaching may reasonably be expected to be true of all times, assuming, of course, that the Veda can convey a meaning (that the Veda is not *nirarthaka*, as Kautsa maintained), and that the meaning is determinable by us. As Ānandagiri says—

स हि स्वसामर्थ्यादिकरूपार्थधीप्रसवहेतुः पुरुषमतिदोषात् तु अन्यथा प्रतिभासत इत्यर्थः ।

—Sūtra 12, line 8. — It is clear that by Vyāsa Śaṅkarāchārya means the author of the Mahābhārata, since under I. iii. 29 and II. iii. 47 he quotes as of Vyāsa or Veda-Vyāsa stanzas which come from the Epic. The Kṛishṇa-Dvaipāyana referred to in III. iii. 32 seems to be the same as the Author of the Epic. Here however he is spoken of as an incarnation of the "Vedāchārya" named Apāntaratamas. Śaṅkara associates Manu and Vyāsa together under III. i. 14 also, and in his comment on Sūtra I. iii. 33, where Bādarāyaṇa is actually named, he tells us—

तथा च व्यासादयो देवादिभिः प्रत्यक्षं व्यवहरन्तीति स्मर्यते ।

Śaṅkarāchārya seems to keep Vyāsa distinct from Bādarāyaṇa whom he regards, in the opening of his Bhāshya on the last Vedānta sūtra, IV. iv. 22, as the Author of the Vedānta Sūtras. It is Vāchaspatimīśra who,—as also Sarvajñātman in his Saṁkshepa-śārīraka i. 6 — identifies Bādarāyaṇa with Vyāsa.

—Sūtra 13, line 1 ff. — The sūtra has called forth considerable differences of opinion amongst the Bhāshyakāras. Śaṅkara, Vallabha, and Bhāskara give one interpretation, Rāmānuja, Nimbārka, and Śrīkanṭha, another, and Madhva quite a third. Taking the last first, according to Madhva—

भोक्त्रापत्तिः = भोक्तुर्जीवस्य ब्रह्मापत्तिः,

according to the śruti (Muṇḍaka III. ii. 7)—

कर्माणि विज्ञानमयश्च आत्मा परेऽव्यये सर्व एकीभवन्ति ।

Madhva concludes that the śruti passage is to be taken in the same sense as the statement —

सायं गोष्ठे गाव एकीभवन्ति,

and does not dis-establish the difference between the Lord and the souls. Of course it is easy to see that the goṣṭha or cowpen bears to the cows a relation different from that of the Lord to the souls. Rāmānuja and others, who regard the world (achit) and the souls (chit) as forming the "body" of the Lord, under stand—

भोक्त्वापत्तिः = ब्रह्मणः (सशरीरत्वेन) भोक्तृत्वापत्तिः,

which means that Brahman would be liable to pain and pleasure according to the Śruti (Chhândogya, viii. 12. 1)—

न वै सशरीरस्य सतः प्रियाप्रिययोरपहतिरस्ति । अशरीरं वाच सन्तं
न प्रियाप्रिये स्पृशतः ।

Rāmānuja meets the Pūrvapaksha by declaring that it is the body brought into existence by merit and demerit that alone can yield pleasure and pain, the instance given being that of the king who, because he has a body, does not necessarily suffer heat etc., these being warded off by his umbrella-bearers. The instance chosen is certainly not very happy. Servants or no servants, the king must feel hungry, and sleep in his own body, and must in any case feel the pleasures to which his retinue contributes. Finally, the interpretation of Śāṅkarāchārya and others, viz.—

भोक्त्रापत्तिः= भोग्यस्य (कार्यस्य कारणानन्यत्वद्वारा) भोक्त्रापत्तिः,
भोक्तुः (कारणस्य कार्यानन्यत्वद्वारा) भोग्यापत्तिः,

is open to the charge that it raises a point already discussed under Sūtras 8-9. Nor do the illustrations chosen, the froth and the wave and the bubble and the ripple, stand to each other in the relation of the Bhoktrī and the Bhogya. — Another possible interpretation can also be suggested.—

भोक्त्रापत्तेरविभागः = भोक्तृणां ब्रह्मणा सह ऐक्यापत्तेः एको भोक्ता
भोक्त्रन्तरादविभक्तः स्यात् । तेन च कृतप्रणाशाकृताभ्यागमौ प्रसज्येताम् ।

The “ordinary” illustration to rebut the objection can be that of a king and his various officers, who are individually portions of the king, as deriving their authority from him; and yet we can keep one officer distinct from the other for practical purposes.

—Sūtra 13, line 2.—Anyaparā, which we have translated as ‘conforming to another means-of-knowledge’ can also be rendered as ‘possessing a secondary significance, i. e., a significance other than the primary. Ratnaprabhā renders the word by “gaurāṭhaka,” Ānandagiri by “Upacharitārtha,” and Vāchaspati by—

मुख्यार्थात् प्रच्याव्य जघन्यवृत्तितां नीयते ।

Compare on the point the passage from Śāṅkara's *Gitābhāṣya* quoted at the end of our Note on *Sūtra* II. i. 4, line 5, above.

—*Sūtra* 13, line 3. — For the nature of Mantra and Arthavāda see our Note on II. i. 5, line 24. When the words of a Mantra do not fit the ritual in which they are prescribed, the words have to be secondarily interpreted. Compare the Mantra prescribed for *dadhi-snāna*.

—*Sūtra* 13, line 21 ff. — The Advaita system of Śāṅkara is peculiar in this that while it is prepared to regard the world as a creation by the Lord it is at pains to exclude the individual soul from the Lord's creation—"Jīvo Brahmaiva nāparaḥ." The point is fully discussed in *Brahmasūtra* II. iii. 17. Compare also II. i. 21, lines 3 ff. — Other Vedāntins, following the *Bṛihadāraṇyaka* (II. i. 20) and *Muṇḍakā* (II. i. 1) Upanishads, conceive of Jivas as real emanations from the Lord, like sparks from the fire. As Śāṅkarācārya himself says at the beginning of the next *sūtra*, this answer to the *Pūrvapakṣin* is from the *vyavahāra* point of view. As the *Ratnaprabhā* says—

एवं प्राप्ते परिणामदृष्टान्तेनापाततः सिद्धान्तमाह—स्याल्लोकवदिति ।

In addition to the strictly "Pariṇāma" illustration of the ocean and its waves Śāṅkara however thinks it fit to add the "vivarta" illustration of space-in-the-jar. Cp. below, II. i. 14, line 27-30.

—*Sūtra* 14, line 11. — An apter example would be that of a piece of timber which you call a 'pillar' when erect and a 'beam' when transverse, the piece being just the same, the name alone constituting the difference. In the process of acquiring knowledge, it is an important event for the child to know the name of a new object, say, an animal. Before you named it a 'hare' it might have been a cat, and so not distinguishable from the specimens of that class. The name introduces the difference and the child thereafter begins to note differences rather than resemblances. It is the name that transforms One into the Many. "What is in a name?" — The whole universe is in the name !

—*Sūtra* 14, line 26ff. — It will be noted that the Ācārya starts with "pariṇāma" illustrations of the clay and the jar, and con-

cludes with "vivarta" illustrations beginning with ghaṭākāśa, which is a "vivarta" illustration inasmuch as space is not really divided.

—Sūtra 14, line 31ff.—The "Bhedābheda" Pūrvapaksha view which Śaṅkara here raises seems to have been an ancient doctrine not unknown to the Sūtrakāra, who ushers in Āśmarathya (I. iv. 20) as an ancient champion of the same. Bhartriprapaṇcha, who seems to have preceded Śaṅkara by a couple of centuries, seems to have accepted the same view, several of Śaṅkara's arguments here and elsewhere being specifically directed against this renowned Vedāntin. See for Bhartriprapaṇcha Professor Hiriyanna's papers in the Ind. Ant., vol. LIII, 1924, pp. 77-86, and Report of the Madras Oriental Conference, pp. 439-450.

—Sūtra 14, line 44.—By declaring the identity between the soul and Brahman as "svayam-prasiddha" Śaṅkarāchārya alludes to the view, discussed by him at length under I. i. 4, that the Moksha state of oneness with the Absolute is neither "utpādyā" or capable of production, like a jar from clay; nor "vikāryā" or capable of being brought about through modification, like curds from milk; nor "āpyā" or capable of being reached, like his own house by a traveller; nor, finally, "saṁskāryā" or capable of being attained by internal purification, like cleanliness by a dust-soiled mirror. As the Bṛihadāraṇyaka (iv. 4. 6) says—

न तस्य प्राणा उत्क्रामन्ति । ब्रह्मैव सन् ब्रह्माप्येति ।

—Sūtra 14, lines 46, 48.—For the different uses of the word "svābhāvika" see Note to sūtra 9 line 35 above; compare also the use of the same word in II. i. 14⁷³ below. In Gītā, v. 15 where the word occurs Śaṅkarāchārya explains it as—

स्वो भावः स्वभावः, अविद्यालक्षणा प्रकृतिः, माया ।

—Sūtra 14, line 66ff.—As Śaṅkarāchārya remarks under I. i. 4, the true function of the Śāstra is negative only—

किमर्थानि तर्हि—आत्मा वा अरे द्रष्टव्यः श्रोतव्यः—इत्यादीनि विधि-
च्छायानि वचनानि । स्वाभाविकप्रवृत्तिविषयविमुखीकरणार्थानीति ब्रूमः । यो
हि बहिर्मुखः प्रवर्तते पुरुषः—इष्टं मे भूयादनिष्टं मा भूदिति, न च तत्रा-
त्यन्तिकं पुरुषार्थं लभते, तमात्यन्तिकपुरुषार्थवाञ्छिनं स्वाभाविककार्यकरण-

संघातप्रवृत्तिगोचरादिमुखीकृत्य प्रत्यगात्मस्रोतस्तया प्रवर्तयन्ति—आत्मा वा अरे द्रष्टव्यः—इत्यादीनि ।

Of a like purport is the parable in the Aitareyopanishadbhāṣya, on II. i.—

अत्राख्यायिकामाक्षते । कश्चित् किल मनुष्यो मुग्धः । कैश्चिदुक्तः कस्मिंश्चिदपराधे सति—धिक् त्वाम् । नासि मनुष्यः । इति । स मुग्धतयात्मनो मनुष्यत्वं प्रत्याययितुं कंचिदुपेत्याह—ब्रवीतु भगवान् कोहमस्मीति । स तस्य मुग्धतां ज्ञात्वाह—क्रमेण बोधयिष्यामीति । स्थावराद्यात्मभावमपोह्य न त्वममनुष्यः, इत्युक्तवोपरराम ।

And if the foolish fellow yet wants to know who he is, one has to confess one's inability to teach; for, the man has to find it out for himself. In the same way Brahman cannot be made known by the Śāstra: and it need not be; for it is self-revealing. Bhāmati is most explicit on the point—

श्रवणाद्युपाय आत्मसाक्षात्कारपर्यन्तो वेदान्तसमुत्थोऽपि शाननिचयोऽसत्यः । यस्तु ब्रह्मस्वभावसाक्षात्कारोऽसौ न कार्यः । तस्मादचोद्यमेतत्कथमसत्यात् सत्योत्पाद इति । यत् खलु सत्यं न तदुत्पद्यते, यच्चोत्पद्यते, तत् सर्वमसत्यमेव ॥

Compare also Śāṅkara's Bhāṣya on Br. Sū, III. ii. 21—

द्रष्टव्यादिशब्दा अपि परविद्याधिकारपठितास्तत्त्वाभिमुखीकरणप्रधाना, न तत्त्वावबोधविधिप्रधाना भवन्ति । लोकेऽपीदं पश्येदमाकर्णयेति चैवंजातीयकेषु निर्देशेषु प्रणिधानमात्रं कुर्वित्युच्यते, न साक्षाज्ज्ञानमेव कुर्विति । । शानं तु प्रमाणजन्यं यथाभूतविषयं च । न तन्नियोगशतेनापि कारयितुं शक्यते, नच प्रतिषेधशतेनापि वारयितुं शक्यते । नहि तत् पुरुषतन्त्रं, वस्तुतन्त्रमेव हि तत् ॥

—Sūtra 14, line 17ff. — Professor Hiriyanna refers me on the point to Bhartrihari's Vākyapadiya (II. 240)—

उपायाः शिक्षमाणानां बालानामपलापनाः ।

असत्ये वर्तन्नि स्थित्वा ततः सत्यं समीहते ॥

—Sūtra 14, line 85. — This is a refutation in passing of the Materialists (cp. II. i. 18⁷⁰, II i. 29^{12ff}, II. ii. 2^{14ff}, ^{20ff}, etc.); the words "Tathā cha Śrutih" continue the main thread of the argument, ignoring the parenthetical interruption. — The Materialist for whom the soul is just the body will find it impossible to explain how, when the external organs of sense are inactive, in dream-condition, a knowledge of the dream at all takes place, unless he posits an internal organ of knowledge, the mind. But even so, as the mind in turn is inactive in deep-sleep, the fact of the persistence of the dream-impression, and of the memory of it carried over across the gulf of the deep-sleep necessarily demands the existence of some entity enduring through all the three states which, in deep-sleep, swoon, and similar states acts as the unconscious retainer of the subliminal memory-impressions, revivable at call. As the Ratnaprabhā on the passage puts it—

स्वप्नस्थावगतेः स्वप्नदेहधर्मत्वं उत्थितस्य मया तादृशः स्वप्नोऽवगत
इत्यबाधितावगतिप्रतिसंधानं न स्यात् । अतो देहभेदेऽप्यनुसंधानदर्शना-
दन्योऽनुसंधातेत्यर्थः ॥

Cp. above, II. i. 6, lines 43ff, and our Note thereon.

—Sūtra 14, line 98. — The true "अ" is the sound "अ"; the letter "अ" is a mere symbol which varies in different scripts and which in the same script might by convention have been otherwise—to say nothing of its palæographic modification.

—Sūtra 14, line 98ff. — "Nātaḥ param " etc. does not mean that this is the very last argument and nothing further should thereafter be demanded by way of an argument. What is meant is that the knowledge conveyed by a statement like "That thou art," the moment its truth is realised, becomes self-convincing and leaves no unfulfilled ākāṅkshās or expectations, as in an ordinary injunction. The following extract from the Artha-saṁgraha will explain the technique of a Scriptural injunction—

यजेत स्वर्गकामः—इत्यादिवाक्येन स्वर्गमुद्दिश्य पुरुषं प्रति विधीयते ।
तथाहि । यजेत—इत्यत्रास्त्यंशद्वयम् । यजिधातुः, तत्प्रत्ययश्च । प्रत्ययेप्यस्त्यं-
शद्वयम् । आख्यातत्वं लिङ्गत्वं च । उभाभ्यामप्यंशाभ्यां भावनैवोच्यते ।
भावना नाम भवितुर्भवनानुकूलो भावयितुर्व्यापारविशेषः । स च व्यापार-

विशेषो लौकिकवाक्ये पुरुषनिष्ठोऽभिप्रायविशेषः । वैदिकवाक्ये तु पुरुषा-
भावात् लिङादिशब्दनिष्ठ एव । अत एव शाब्दी भावनेति व्यवहियते । सा
च भावना अंशत्रयमपेक्षते, साध्यं साधनमितिकर्तव्यतां च—किं भावयेत्,
केन भावयेत्, कथं भावयेदिति । किं भावयेदिति कर्माकाङ्क्षायां स्वर्गो
भाव्यत्वेनान्वेति । ततः केनेति करणाकाङ्क्षायां यागः करणत्वेनान्वेति ।
ततः कथंभावाकाङ्क्षायामग्र्यन्वाधानावहनादिजन्यदृष्टोपकारेण प्रयाजादि-
जनितादृष्टोपकारसहितेन यागेन स्वर्गं भावयेदिति अग्र्यन्वाधानप्रयाजादि-
कमङ्गजातमितिकर्तव्यतयान्वेति ॥

As the Bhāmātī puts it—

तत्त्वमसीत्यैकात्म्यावगतिः समस्तप्रमाणतत्फलतद्वयवहारान् अपवाधमानै-
वोदीयते । नैतस्याः परस्तात् किञ्चिदनुकूलं प्रतिकूलं चास्ति यदपेक्षेत येन
चेयं प्रतिक्षिप्येत । तत्रानुकूलप्रतिकूलनिवारणाच्चातः परं किञ्चिदाकाङ्क्ष-
मिति ॥

—Sūtra 14, line 112. — Compare Śāṅkarācārya's statement at
the very opening of the Brahmasūtrabhāṣya—

युष्मदस्मत्प्रत्ययगोचरयोर्विषयविषयिणोस्तमःप्रकाशवद्विरुद्धस्वभावयोरित-
रेतरभावानुपपत्तौ सिद्धायाम्...अप्यन्योन्यस्मिन्नन्योन्यात्मकतामन्योन्यधर्मा-
श्चाध्यस्य...मिथ्याज्ञाननिमित्तः सत्यानृते मिथुनीकृत्य अहमिदं ममेदमिति
नैसर्गिकोऽयं लोकव्यवहारः ॥

—Sūtra 14, line 120. — The word "Kūṭastha" is unknown to the
major Upanishads. The Gītā uses the word thrice, the most im-
portant passage being xii. 3—

सर्वत्रगमचिन्त्यं च कूटस्थमचलं ध्रुवम् ।

"Kūṭa" signifies both a riddle or deception, and the bone of the
forehead, and a mountain-peak; in the latter sense the word is
spelt as "kūṭa" also. Vedānta may have borrowed the word
from Buddhism. "Kūṭattho" occurs frequently in the Buddhist
Canon and is explained by—"pabbatakūṭam viya ṭhito." Kūṭa
in the sense of māyā as in kūṭaprasna or kūṭasākshin, and kūṭa
in the sense of top or summit as in Gridhrakūṭa, Chitrakūṭa etc.
may have been two distinct words later fused together in sense.

—Sūtra 14, line 134. — The fourth pāda of the fourth adhyāya of Jaimini's Mimāṃsāsūtras gives several illustrations of the application of this maxim. Thus sūtra IV. iv. 7 says—

फलवत्...इतरस्य प्रधानं स्यात् ।

while part of sūtra IV. iv. 34 is—

तत् पुनर्मुख्यलक्षणं यत् फलवत्त्वम्, तत्संनिधावसंयुक्तं तदङ्गं स्यात् ।

The actual wording of the maxim quoted by Śaṅkarāchārya occurs in Sabarasvāmin's Bhāṣhya under IV. iv. 19. A śrauta illustration of the maxim is furnished by the following Brāhmaṇa passage—

राजसूयेन स्वाराज्यकामो यजेत ।.....प्रष्टौर्हो दीव्यति, राजन्यं जिनाति, शौनःशेषमाख्यापयति, अभिषिच्यते ।

The question is, Do the various requirements such as gambling away a young cow, vanquishing princes in a tournament, recital of the story of Śunaḥśepa, ablution, and so forth, constitute a subordinate ritual to the Rājasūya, or have they an independent status? The conclusion is that, as no special reward is declared in connection with them, and as, in close proximity to them, occurs the royal sacrifice for which "svārājya" is assigned as a reward, that which has no reward becomes subordinate to that which has it.

—Sūtra 14, line 135 ff. — In the Bālāki-Ajātaśatru dialogue in Brih. ii. 1 and Kaush. iv, several upāsanas of Brahman as "Atishṭhāh," "Tejasvin," "Pūrṇam," "Vishāsahī," "Pratirūpa," "Rochishṇu," "Anapaga," "Ātmanvi," etc. are mentioned, and in each case the corresponding fruit of the upāsana makes the upāsaka himself endowed with the above attributes :

तेजस्वीति वा अहमेतमुपासे...स य एतमेवमुपास्ते तेजस्वीह भवति ।

The principles which the Pūrvaapakshin here introduces as regards parināmitva knowledge resulting in the Ātman's being made liable to parināma is accordingly a recognised Upanishadic principle which has been here turned to an absurd use. — In the Vedāntic system, "Saguna-upāsanas" or meditations on certain qualified aspects of Brahman are prescribed as means or steps leading to the upāsana of the Nirguṇa or quality-less Brahman.

—Sūtra 14, line 143. — A definition, according to the Advaita philosophy, is of two kinds : “ svarūpa-lakṣhaṇa ” and “ tātaṣtha-lakṣhaṇa. ” The first describes the real essence of a thing, *e. g.*, when Brahman is defined as “ sat, chit, and ānanda ; ” the second is defined as—

यावल्लक्ष्यकालमनवस्थितत्वे सति व्यावर्तकम् ।

Thus, it is only when the Brahman is “ Māyāśabala ” or viewed as obscured by cosmic illusion that it produces, controls, and re-absorbs the universe : the “ śuddha ” Brahman is absolutely unrelated in any way to the universe. Thus the definition in Brahmasūtra I. i. 2 is not true of the “ śuddha ” Brahman ; but as no other cause to the world is possible, the definition serves to distinguish Brahman from other alleged first principles like the Pradhāna.

—Sūtra 15, line 5 ff. — Although smoke is the kārya or effect of fire, as we ordinarily understand the relation—so that it is only when fire is there that smoke can arise—fire is not the material or upādāna out of which smoke is evolved, just as clay is the material out of which the jar is formed. Fire, at the most, becomes one of the essential conditions for the production of smoke and does not therefore differ from other conditions like air or ākāśa, in the absence of which also smoke cannot arise.

—Sūtra 15, line 8. — The special qualifications, viz., avicchhina-mūla-dirgharekhāvastha, or bahalordhvāgratva, are suggested by the circumstance that the smoke in the cow-boy’s pipe is cold, not copious, and not steadily rising upwards in a thick column.

—Sūtra 15, line 9. — To have a “ kāryakāraṇa ” relation leading to identity between two things, it is not enough that one of them should exist only when the other exists ; it should be so much infused or interpenetrated with the characteristic attributes of the other as to raise a vivid mental picture of it, so that one could equate the two as when it is said : the jar is clay. We cannot however say : the smoke is fire. Smoke can possibly suggest humid fuel, but never the heat and brightness of fire.

—Sūtra 15, line 11. — The alternative reading of the text of the sūtra might have been suggested by the Sāṃkhyakārikā 9—

असदकरणादुपादानग्रहणात् सर्वसंभवाभावात् ।

शक्तस्य शक्यकरणात् कारणभावाच्च सत् कार्यम् ॥

“Because non-existence can never be brought into existence; because people use (definite) materials (for definite ends); because everything does not spring from everything; because a capable cause must produce what it is capable to produce; and because (the effect) is of the nature of the cause; therefore the effect pre-exists (in the cause).” Śāṅkarācārya's interpretation of the word is, however, different. — Vallabhācārya, who interprets the sūtra as preaching the reality of the world (the world, the effect, is perceived by us because it exists, bhāve), roundly accuses Śāṅkarācārya of wilful perversion—

इदं सूत्रं मिथ्यावादिना न ज्ञातमेव । अत एष पाठान्तरकल्पनम् ।

—Sūtra 16, line 6. — For the idea compare Māṭhara's explanation under the Sāṅkhyakārikā quoted in the preceding note—

इह लोके यद्यस्मिन् विद्यते तस्मादेव तदुत्पद्यते । यथा तिलेभ्यस्तैलं दध्नी घृतम् । यदि वा असत् कार्यं स्यात् तत् सर्वं सर्वत्र संभवेत् ।

—Sūtra 16, line 8 ff. — The argument is rather subtle. We might recall the instance of a reasoning conformable to scripture which Śāṅkarācārya gave under II. i. 6^{44, 45}, which implies that the essence of a thing is what never leaves it under all circumstances. What in a jar is this essence that endures? Not its colour or shape; for these might wear away. Not even its jar-ness; for it was not there before production, and will vanish away after its destruction. Only earth or clay remains. Working backwards to the cause of clay and to the First Cause of the world, the only thing that endures in the world and therefore forms the essence of the totality of effects is *mere* existence, and not *particularised* existence. And we know that the kāraṇa or Brahman is existence, intelligence and bliss. Now a *mere* existence cannot be further discriminated. It is, and can be, only “akhaṇḍaika-rūpa.” Hence the essence of a kārya is kāraṇa and of the totality of the kāryas, the Kāraṇa, viz., Brahman.

—Sūtra 17 line 10. — This maxim of interpretation is given in Mīmāṃsasūtra I. iv. 29—

संदिग्धेषु वाक्यशेषात् ।

Sabara's comment on it runs thus—

अक्ताः शर्करा उपदधाति । तेजो वै घृतम्—इति श्रूयते । तत्र संदेहः—
किं घृततैलवसानामन्यतमेन द्रव्येणाञ्जनीयाः शर्कराः उत घृतेनैव—इति ।
कथं संदेहः । अञ्जनसामान्येन वाक्यस्योपक्रमः । घृतेन विशेषेण निगमनम् ।
यथोपक्रमं निगमयितव्यमेकस्मिन् वाक्ये । । संदिग्धेष्वेवं प्राप्ते ब्रूमः—
सामान्यवचनेन विशेषापेक्षिणा उपक्रमो वाक्यस्य, विशेषे निगमनवशेन ।
तस्माद्घृतविधानम् ॥

The same rule is to be applied to statements like—

वासः परिधत्ते । एतद्वै सर्वदेवत्यं वासो यत् शौमम् ।

—Sūtra 17, line 15— See below, II. i. 18, lines 44 ff.

—Sūtra 18, line 2. —The “yukti” used in the next few lines is the same that we have in Sāṃkhyakārikā 9, above quoted, viz., “Upādānagrahanāt.” —The assumption of an “atīśaya” or a subtle-form of the effect in the cause practically amounts to “satkāryavāda.” The assumption of some “śakti” or potency avoids, it is true, a direct reference to the effect, as it is a something inherent in the cause. But that something must have at least existence. If it be a *non-existent* something, you cannot say that it is peculiar to clay or milk or any specific cause. The śakti therefore must be an existing something; and we now inquire if it is distinct from (i) cause, and from (ii) effect. If it be altogether distinct from cause, how can you say that it is peculiar to cause and always inheres in it? Also if it is altogether distinct from the effect, why should such a *tertium quid* entirely unrelated to the jar be taken to be the determinant of the jar any more than that of cloth or of curds, seeing that the quality of “anyatva” or distinctness is possessed by the śakti with reference to all these effects? Hence the conclusion.

—Sūtra 18, line 13. —The doctrine of Samavāya is peculiar to the Vaiśeṣika Philosophy, which regards it as an independent category. Samavāya is a “padārtha” which is defined as—

नित्यसंबन्धः समवायः ।

and which is said to exist between the following five “ayuta-siddha” pairs—

ययोर्द्वयोर्मध्य एकमविनश्यदपराश्रितमेवावतिष्ठते तावयुतसिद्धौ यथा—
अवयवावयविनौ, गुणगुणिनौ, क्रियाक्रियावन्तौ, जातिव्यक्ती, विशेषनित्य-
द्रव्ये च ॥

It is the first pair in particular that comes into discussion in the ordinary causal relation. The threads are the parts or "avayavas" out of which cloth, the "avayavin" is produced. The Vaiśeṣhikas hold that threads are distinct from the cloth and that the cloth is a new something which is generated in consequence of the "kāraṇavyāpāra" or causal operation. The threads have merged their independent existence as threads into the cloth which is generated: but in course of time, when the cloth is destroyed, the threads are what remain behind. Hence we cannot say that the threads are really non-existent in the cloth. They are there, but in an inseparable condition. The moment you try to separate them the cloth vanishes. That two distinct things like threads and cloth should remain so inseparably united together calls, according to the Vaiśeṣhikas, for a special explanation; and this they attempted to furnish by imagining a special link or relation between the two in the form of what they call Samavāya, which is like glue holding two pieces of paper tightly together. The glue is by nature adhesive and nothing more is needed to keep the paper on either side and the glue together. Śāṅkarācārya is about to discuss the inadequacy of the explanation: but, such as it was, it has served to give a common-sense, realistic turn to the Vaiśeṣhika Philosophy, both in its explanation of the causal relation and of the relation between substance and its qualities. A much fuller refutation of the Samavāya is given under II.ii. 13.

—Sūtra 18, line 17. — Samyoga or conjunction is one of the twenty-four qualities or guṇas enumerated in the Vaiśeṣhika Philosophy—

रूपरसगन्धस्पर्शसंख्यापरिमाणपृथक्त्वसंयोगविभागपरत्वापरत्वगुरुत्वद्रवत्व-
स्नेहशब्दबुद्धिसुखदुःखेच्छाद्वेषप्रयत्नधर्माधर्मसंस्काराश्चतुर्विंशतिर्गुणाः ।

Every guṇa exists upon the dravya or guṇin by a samavāya relation. If samavāya as well as samyoga is a sambandha or a relation of connection, Śāṅkarācārya rightly protests against the unlike treatment given to each. Compare II. ii. 13, lines 11-15.

—Sūtra 18, line 19 ff. — We can at any time see only parts of a jar : the side of the jar turned away from us, its inside, bottom, etc.—as the case may be—remain invisible in any single act of seeing. If, therefore, jar, the avayavin, resides in all the avayavas *taken together*, we can never visualise the jar because we can never take in all the avayavas together in one effort of vision [case i. a]. If the avayavin jar (which means a totality of avayavas) is to reside in such a manner that each of its own avayavas comes seriatim into contact with the corresponding avayava of its cause the clay (as does the thread with the flowers woven into a garland), so that in one glance we can take in the whole avayavin, although only a few of its avayavas are in contact with the eye (as we can lift up the whole garland by grasping only a few of its flowers), we in that case get rid of the earlier difficulty but fall into another, inasmuch as we are arguing as if the avayavas which go to make up the totality of the jar are different from the avayavas in which that totality is to reside as a whole. And the same hypothesis and the same difficulty will have to be repeated about this *new totality* and *its* constituent avayavas [case i. b]. If, finally, the whole jar is to reside in each single constituent avayava, turn by turn, the difficulty just alluded to, viz., positing a double series of avayavas, remains just the same, and there arises another new difficulty that, while the bottom of the jar is having the jar-ness on it, so that water does not leak downwards, its sides will have no jar-ness on them and will therefore—as mere particles of clay—fall asunder [Case ii].

—Sūtra 18, line 28. — Śāṅkarācārya mentions the two cities of Srughna and Pāṭaliputra once more under IV. ii. 5 —

योपि सुघ्नान्मथुरां गत्वा मथुरायाः पाटलिपुत्रं व्रजति सोपि सुघ्नात्
पाटलिपुत्रं यातीति शक्यते वक्तुम् ।

The late Justice Telang argued that this offhand allusion to these cities must be taken to imply that both these cities were in existence in Śāṅkarācārya's days. Now we know that Pāṭaliputra, once the capital of India, and mentioned by Patañjali (B. C. 150) and several Greek and Chinese writers, was washed away about the year A. D. 750 by excessive floods. The city formerly stood

on the tongue of land formed by the confluence of the *Śoṇa* and the *Ganges*, on the southern bank of the latter, the modern city of *Patna* dating only from the time of *Śher Shah* (A. D. 1514). *Srughna* also is a very ancient city situated near *Thaneshwar* on the *Jumna* and identified with modern *Sugh*, which barely contains a few hundred houses. This latter city was in ruins at the time of the visit of *Hien Tsang*. "It possessed five monasteries containing one thousand monks who discussed clearly and ably the most profound and abstract questions; it also possessed one hundred temples of Brahmins, whose followers were extremely numerous." Both these cities must have been in a flourishing condition in the days of *Śāṅkara*, whose date can therefore be not later than about 750 A. D.—argued *Telang*. But why must the cities be in a *flourishing* condition? And might not these examples have been used by others before *Śāṅkara*? As a matter of fact *Patañjali*, commenting upon *Vārttika* 12 to *Pāṇini* I. i. 1 and *Vārttika* 48 to I. ii. 64 uses an allied illustration, viz.—

न ह्येको देवदत्तो युगपत् सुध्रे भवति, मथुरायां च ।

The *Sāṅkhyasūtra* I. 28 names the same two cities as our text—

न बाह्याभ्यन्तरयोरुपरज्योपरञ्जकभावोऽपि देशव्यवधानात् सुध्रेऽथवा मथुरायां च ।

—*Sūtra* 18, line 30. — The *Jāti* or *Sāmānya* (genus or generality) is defined as —

नित्यमेकमनेकानुगतं सामान्यम् ।

It is believed to have a real existence independent of the species, herein resembling the Ideas of Platonic Philosophy. A *Jāti* is one, and is found existing at one and the same time on all the species. Hence the point of the illustration.

—*Sūtra* 18, line 34. — A thing is what it is because it functions in a particular manner. The hand cut off from the body is no longer the hand, as *Artistotle* said long ago. The *avayavin* therefore must act as a full-fledged *avayavin* before we are prepared to assume that every one of its constituent particles contains the whole *avayavin*. This of course is impossible.

—Sūtra 18, line 35. — A verb or an ākhyāta implies a process of happening, with a beginning, a middle, and an end, and a definite sequence : As Yāska says (Nirukta i. 1)—

पूर्वापरीभूतं भावमाख्यातेनाचष्टे—व्रजति, पचतीति—उपक्रमप्रभृत्य-
पवर्गपर्यन्तम् ।

Now, the verbal action implied in the statement, " the jar is produced," involves a " kāraka-vpāyāra," that is to say, a series of complicated movements to which the product-in-the-making is being subjected by a definite agent working with the help of specific instruments and accessories. And Śaṅkarāchārya pertinently asks, who or what is being subjected to this " kāraka-vyāpāra," which begins much prior to the exact moment of the " production " of the jar as popularly understood ? The production of the jar is an assemblage of activities such as refining, kneading, moulding, whirling on the wheel, drying, baking and what not. If the clay is to undergo these processes, as the sum-total of the processes is equal to production, we will have to say that clay is being produced and not the jar. If the jar is declared as being produced, it must exist throughout the whole process, in which case there cannot be any antecedent non-existence of the effect. If neither clay nor jar nor anything else is to be the subject of the action, the action becomes "soul-less."

—Sūtra 18, line 43. — The Pūrvapakshin tries to get over the difficulty by declaring that the multiform kāraka-vyāpāra is nothing but a process of establishing the relation (of samavāya) between the cause clay, and the effect jar; or—as an alternative supposition—between the jar and its own existence. The latter supposition, although apparently maintained by certain older Vaiśeshikas, is hardly convincing. Śaṅkarāchārya, however, objects to it by pointing out that since the causal operation is a process occupying several moments, and commencing much prior to the moment of the so-called production of the jar, this would amount to an attempt to connect existence with non-existence.

—Sūtra 18, line 45.—Abhāva or non-existence as a padārtha is divided by the Vaiśeshikas into four varieties :

अनादिः सान्तः प्रागभावः, उत्पत्तेः पूर्वं कार्यस्य । सादिरनन्तः प्रध्वंसः,
उत्पत्त्यनन्तरं कार्यस्य । त्रैकालिकसंसर्गावच्छिन्नप्रतियोगिताकोऽत्यन्ताभावः,
यथा भूतले घटो नास्तीति । तादात्म्यसंबन्धावच्छिन्नप्रतियोगिताकोऽन्योन्या-
भावः, यथा घटः पटो न भवतीति ॥

Now, the point of Śaṅkarāchārya's contention is that if jar is to be produced, let us say, to-morrow, to say that there is its non-existence to-day, and that this non-existence is to end after 24 hours is an abuse of language. "To-day" is not any the poorer or the richer for the non-existence of the jar or for a host of other non-existences. The non-existences being mere voids, how can you distinguish the non-existence of to-morrow's would-be jar from the non-existence of the day-after-to-morrow's would-be jar or plate or piece-of-cloth ?

—Sūtra 18, line 47. — The king Pūrṇavarman is also alluded to by Śaṅkarāchārya in his Bhāṣhya on the Chhāndogya Upanishad, i. 23 (Ānandaśrama ed., page 115)—

यथा पूर्णवर्मणः सेवा भक्तपरिधानमात्रफला, राजवर्मणस्तु सेवा राज्य-
तुल्यफलेति ।

Are we justified in regarding Pūrṇavarman and Rājavarman as names of actual kings ; and even if they are the names of actual kings, must we regard them as more or less contemporaries of Śaṅkarāchārya ? There are also names of other kings mentioned by Śaṅkarāchārya. Thus under II. iv. 1 he says—

यथा सिंहस्तथा बलवर्मणि ।

and under IV. iii. 5—

गच्छ त्वमितो बलवर्मणिं ततो जयसिंहं ततः कृष्णगुप्तमिति ।

One of these, Balavarman, has been with great probability identified with a Chālukya prince of that name who can be assigned to the period, cir. 767 to 785 A.D. (see Indian Antiquary for 1912, p. 200). Jayasinha and Krishnagupta are more dubious figures. We know of no names that would exactly fit the time. The late Justice Telang tried to identify Pūrṇavarman with a Magadha prince of that name belonging to cir. 600 A.D. But as a considerable mass of recent evidence marks the end of the eighth

century as the *floruit* of the Āchārya, we have to leave the attempt to more precisely locate Jayasinha, Kṛṣṇagupta Pūrṇavarman, Rājavarman, and the rest as impracticable in the present state of our knowledge. The identification of Balavarman with the Chālukya prince we might accept, because it harmonises with other facts independently ascertained.

—Sūtra 18, lines 53 to 58. —The Brahmaṇḍaśāstra thus clearly explains the point at issue—

तार्किकेण हि उपादानात् कपालद्वयादतिरिक्तमेव घटाख्यं द्रव्यं जायते,
तस्य च कम्बुग्रीवादिसत्त्वं संस्थानं धर्म इत्युच्यते ।.....। तथा सति
कपालपरिमाणं घटपरिमाणं चेति परिमाणद्वयं तथैव रूपद्वयं गुरुत्वद्वयं
चोपलभ्येत । न चोपलभ्येत । अतो न द्रव्यद्वयं तत्र । अपितु एकस्यैव
मृद्द्रव्यस्य पूर्वं पिण्डावस्था, तदनन्तरं कपालाकारः, तदाच्छादनेन घटा-
कारः । तथाच आकारविशेषसिद्ध्यर्थं कारकव्यापार उपपद्यते ॥ नच
सत्कार्यवादे आकारविशेषस्यापि प्राक्सत्त्वात् न तदर्थमपि कारकव्यापार इति
वाच्यम् । आकारविशेषाणां प्रागसत्त्वोपपत्तेः । नच तथा सति सत्कार्य-
वादहानिः । कार्यानुस्यूतकारणस्य प्राक्सत्त्वेनैव सत्कार्यवादोपपत्तेः ॥ यदितु
प्रागसतः कम्बुग्रीवादिसत्त्वाकारस्योत्पत्तिर्न संभवति, असत् उत्पत्तेर्निराकृ-
तत्वात्, तर्हि सतोऽप्युत्पत्तिर्न संभवतीति सत्त्वासत्त्वाभ्यां प्राज्ञ निरूप-
यितुमशक्त्या आकारा अनिर्वचनीया एव भवन्तु । का नः क्षतिरिति ।
अतो दुर्निरूपत्वादपि प्रपञ्चस्वरूपस्य स्वप्नादिवन्मिथ्यात्वमिति सिद्धम् ॥

The ultimate view that is endorsed by Śaṅkarāchārya is not “*satkāryavāda*” but “*satkāraṇavāda*”—if we may coin the term to denote the antecedent existence of the *kārya* not as *kārya* but as *kāraṇa*. For the Bhāmatikāra has declared with his usual lucidity—

यथा भुजङ्गतत्त्वं न रज्जोर्भिद्यते, रज्जुरेव हि तत्, काल्पनिकस्तु भेदः,
एवं वस्तुतः कार्यतत्त्वं न कारणाद्भिद्यते, कारणस्वरूपमेव हि तत्,
अनिर्वाच्यं तु कार्यरूपं भिन्नमिवाभिन्नमिव चावभासत इति ॥

Production, in other words, is no *physical* happening of any kind; it is a *mental* or *intellectual* fact comparable to the imaginings of the dream-world. Cause = Effect, *minus* Time; Effect = Cause,

plus Time ; and for an absolute intellect Time does not exist. Hence, Cause = Effect. This takes us as near the Kantian viewpoint as one can ever wish.

—Sūtra 18, line 71.— For detailed refutation of the Buddhistic doctrine of the momentariness of things see II. ii. 18-27. Since there endures a permanent substance or *Vastu* amidst modifications in form, size, and so forth, we cannot say that all things are momentary only.

—Sūtra 18, line 72.—There is not much appreciable difference between the earlier argument that production will be “*akartrika*” and the present argument that the causal-operation will be “*nir-vishaya*,” seeing that “*ghaṭa*” is both the (grammatical) *kartri* of the verb “*utpadyate*” and the *vishaya* of the “*utpatti*.” They are merely two ways of looking at the same fact.

—Sūtra 19, line 7.— All Bhāshyakāras understand the simile in this and in the next sūtra in the same manner as Śāṅkarāchārya. Rāmānuja, however, takes sūtra 19 to mean—

यथा तन्त्व एव व्यतिषङ्गविशेषभाजः पट इति नामरूपकार्यान्तरादिकं
भजन्ते तद्वत् ।

Madhvāchārya's mode of interpretation is peculiar to himself—

पटवच्च = पटसृष्टिवद्विश्वसृष्टिरपि कर्तृभिन्नसाधनान्तरसाध्या ।

यथा प्राणादि = यथा प्राणदेहेन्द्रियादिकं न स्वतन्त्रम्, एवं प्रकृत्यादि-
साधनान्तरमपि ।

This only shows how ingenious writers could make the sūtras mean any and everything to suit their own theory.

—Sūtra 20, line 1.—As regards the five breaths—*Prāṇa*, *Apāna*, *Vyāna*, *Udāna*, and *Samāna*—they are regarded as different names given, according to location and function, to one and the same Vital-principle. The locations are given in the familiar stanza—

हृदि प्राणो गुदेऽपानः समानो नाभिसंज्ञितः ।

उदानः कण्ठदेशस्थो व्यानः सर्वशरीरगः ॥

Prāṇāyāma, as a process of controlling breath, has three stages—

रेचनम् = कौष्ठ्यवायोर्विरेच्य बहिर्धारणम् = प्रश्वासः ।

पूरणम् = बाह्यवायोराचम्यान्तर्धारणम् = श्वासः ।

कुम्भनम् = श्वासप्रश्वासयोः सकृत्प्रयत्नात् स्तम्भनम् ।

In the last process the wind, Vāchaspati tells us,—

बलवद्विधारकप्रयत्ननिरुद्धक्रियः शरीर एव सूक्ष्मीभूतोऽवतिष्ठते ।

—The “Ārambhana” *adhiḥkaraṇa* as a whole has evoked considerable differences of opinion amongst the *Bhāṣhyakāras*, and quite naturally. First as to the extent of the *adhiḥkaraṇa*, while *Bhāskara* and *Vallabha* agree with *Śaṅkara* in making it consist of seven *sūtras* (14-20), *Rāmānuja*, *Nimbārka*, and *Srikanṭha* read our *sūtras* 17 and 18 as one continuous *sūtra*, *Srikanṭha* further including in the topic of this *adhiḥkaraṇa* *sūtras* 21, 22 and 23. The Upanishadic passage intended by *sūtra* 14 is given identically by all *Bhāṣhyakāras* except *Madhva*, who makes the “*ārambhana*” passage refer to *Rigveda* x. 81. 2--

किं स्विदासीदधिष्ठानमारम्भणं कतमस्त्वित् कथासीत् ।

यतो भूमिं जनयन् विश्वकर्मा विद्यामौर्णोन्महिना विश्वचक्षाः ॥

And in accordance with that passage makes the *sūtra* raise the question as to whether the material out of which God fashioned the world—distinct from him as it was—was independent of him or subservient to him.—*Nimbārka* in the same *sūtra* makes the word “*an-anyatva*” to mean “*an-atyanta-bhinnatva*,” *i. e.*, not *absolute* distinction between cause and effect, but only partial distinction from certain points of view only. *Nimbārka*, it will be noted, champions what is called the “*Bhedābheda*” view, which *Śaṅkarāchārya* finds it fit to introduce as a *pūrvapakṣa* in II. i. 14³¹⁻³⁷. The interpretation, as we saw, had been current even before the days of *Śaṅkarāchārya*; but it seems to be rather forced. Against *Śaṅkarāchārya*’s interpretation we would say this much that while professedly essaying to answer all the logical objections against the *Advaita* position, he is compelled to throw logic overboard and take his stand indubiously upon pure Scriptural authority. *Śaṅkarāchārya* could point to the wording of *sūtra* 27 in defence. He, however, is forced to keep continually shifting from the “*vyāvahārika*” to the “*pāramārthika*” view in his interpre-

tation of the sūtras. This was inevitable from his own philosophical position, although one is inclined to raise at times the question as to whether the Sutrakāra himself really intended all that. Rāmānuja and Vallabha, having Śāṅkara's interpretation before them, make it a point to deliver a studied attack against him, Rāmānuja introducing the discussion with the words—

तदेतदविदिताद्वैतयाथात्म्यानां भेदवादश्चद्राज्यजनसबहुमानावलोकनलि-
प्साविजृम्भितम् ।

Vallabha is even more unrestrained—

ये पुनर्भिथ्यात्वं तामसबुद्धयः प्रतिपादयन्त तैर्वैवादाः सूत्रश्रुतिनाशनेन
तिलापःकृता वेदितव्याः । अन्तःप्रविष्टचोरवधार्यमेवैव आरम्भः ।

On the whole one is inclined to agree with Bhāskara's cogent remarks against the Māyāvādin—

कार्यकारणयोरनित्यत्वादित्यनेन हेतुनात्मैकत्वं प्रतिपाद्यते भवता । स
चायमसिद्धो हेतुः, सर्गानभ्युपगमे विषयादि सर्वे नित्यं भीमांसकानामिव
प्रसज्यते । । कथमिदं मायामात्रं प्रमाणमन्तरेण प्रतिज्ञातुं
शक्यम्, त्रिवृतं त्रिवृतमेकैकं करवाणीति बहुद्विपूर्वं परदेवताप्रवृत्तेः । तदभि-
प्रायमज्ञात्वा को नामादृष्टनिर्भयः सर्वं मिथ्येति कल्पयितुमर्हत् । ।
का चेयमविद्या सत्त्वासत्त्वाभ्यामनिर्वचनीया ।

यस्याः कार्यमिदं कृत्स्नं व्यवहाराय कालाते ।

निर्वर्तुं सा न शक्येति यत्नं वञ्चनार्थकम् ॥

Noteworthy also are the words of Keśava Kāśmirin—

किंच ईश्वरस्यातात्त्विकत्वे निरीश्वरसांख्यादिभ्योऽवैदिकेभ्यस्तव सिद्धा-
न्तस्य परवञ्चनं विना को वा विशेषः । । यदि प्रपञ्चमिथ्या-
वादः श्रुतः स्यात् तर्हि शुक्तिरजतादिदृष्टान्ता वेद उपन्यस्ता स्युः ।

If sūtra 13, giving a popular *drishṭānta*, be conceived from the "vyavahāra" point of view, sūtra 14 at least must give the "pāra-mārthika" view. But inasmuch as, in Śāṅkarācārya's interpretation, the creation as such is a fiction, the sūtra need not have taken the trouble to declare the effect to be non-different from the cause.

—Sūtra 21 line 3. — The first word in the sūtra has been variously interpreted:

इतरस्य शारीरस्य ब्रह्मात्मत्वव्यपदेशात्	}	शंकर;
इतरस्य ब्रह्मणः शारीरात्मत्वव्यपदेशात्		
इतरस्य जीवस्य ब्रह्मात्मत्वव्यपदेशात्	}	रामानुज, श्रीकण्ठ, वल्लभ, निम्बार्क, भास्कर;
इतरस्य जीवकर्तृत्वस्य [युता] निर्देशात्		
		मध्व.

The “śruti” passage on which Maṇḍiśa bases his peculiar interpretation, viz. —

जीवाद्भवन्ति भूतानि जीवे तिष्ठन्त्यचञ्चलाः ।

जीवे प्रलयमृच्छन्ति न जीवात् कारणं परम् ॥

I have been unable to trace to its “śruti” source.

—Sūtra 22, line 22.—In spite of Śaṅkarāchārya’s attempt to dub the whole Samsāra and the distinction between the souls and the Brahman as a fiction or illusion, there can be no gainsaying the fact that the wording of the present sūtra clearly contemplates the distinction by pronouncing the Lord-and-Creator as superior. There are several other sūtras that equally assert this distinction. For instance,—

३. ४. ८—अधिकोपदेशात्तु बादरायणस्यैवं तद्दर्शनात् ।

१. १. १६—नेतरोऽनुपपत्तेः ।

१. ३. १८—परपरामर्शात् स इति चेन्न, असंभवात् ।

२. ३. २१—नाप्यस्तच्छ्रुतेरिति चेन्न, इतराधिकारात् ।

१. १. १७—भेदव्यपदेशाच्च ।

२. ३. ४१—परात्तु तच्छ्रुतेः ।

१. २. ११—गुणं प्रविष्टावात्मानौ हि तद्दर्शनात् ।

४. ४. १७—जगद्रथापारवर्जं प्रकरणादसंनिहितत्वाच्च ।

Are all these sūtras, and many others of an allied nature, merely meant to be true from the “vyāvahārika” point of view, and no more? When cornered, the Āchārya would say that he is prepared

to recognise the distinction between the soul and the Creator (=aparabrahman), but not that between the soul and the Para or the Kūṭastha Brahman.

—Sūtra 23, line, 8.—Śāṅkara, Nimbārka and Bhāskara take the word "tat" in this sūtra to refer to "para-parikalpita-dosha" or "parokta," which presumably means "hitākaraṇādi-dosha" alleged in sūtra 21. In an expanded form the sūtra would read—

अश्मादौ इव ब्रह्मणि हिताकरणादिदोषप्रसक्तिः ।

अश्मादीनामिव जीवानां हिताकरणादिदोषप्रसक्तिः ।

But the way in which the above Bhāṣyakāras understand the simile does not bring out clearly how "hitākaraṇa" is at all applicable to the stones or to the earth. The same remark applies to the explanation of Vallabha. The point is not to prove that different effects can arise out of the same cause (this was the topic of sūtra II. i. 6), but to bring in the "hitākaraṇa" in the explanation of the simile. The Ratnaprabhā, accordingly, misses the mark when it introduces sūtra 23 thus—

नन्वखण्डैकरूपे ब्रह्मणि कथं जीवेश्वरवैचित्र्यमित्यनुपपत्तिं दृष्टान्तैः परिहरति सूत्रकारः ।

With this explanation, the first illustration of Śāṅkarācārya explains *svarūpa-vaichitrya*; the second, *dharma-vaichitrya*; the third, *arthakriyā-vaichitrya*. Brahmānandasarasvatī has probably perceived the difficulty and so offers an explanation of his own, which is, however, a little forced.

यथाश्मादिरूपमण्यादिगतस्य मुखादिप्रतिबिम्बस्य तद्गतस्यामत्वप्रतीतिर्न तु मुखादेः, तथाविद्यानिमित्तकहिताहितादिप्रतीतिर्जीव एव, न तु ब्रह्मणीत्यतस्तस्या उक्तप्रसक्तेरनुपपत्तिः ।

The other commentators seem to understand the simile somewhat differently—

१. यथा अश्मादिषु (अचिद्विकारेषु) ब्रह्मैक्यव्यपदेशानुपपत्तिः तथा (चिद्विकारेषु)

जीवेषु सर्वथा ब्रह्मैक्यव्यपदेशानुपपत्तिः—श्रीकण्ठरामानुजौ;

२. अश्मादेरिव जीवस्य (चेतनत्वेप्यस्वातन्त्र्यात्) स्वतःकर्तृत्वानुपपत्तिः

—मध्व.

In explanation (2) "tat" = "itaravyapadeśa;" but "itara" curiously enough is taken to denote not *jīva* but "*jivakartṛitva*." As to Rāmānuja's explanation, it has the weak-point of (indirectly, it may be) denying the very fact of "*itaravyapadeśa*" which was the starting point of the *Pūrvapaksha*. Can the point of the simile be this? — We hammer and chisel stones in order to shape them into images of gods. The process of hammering is extremely painful; but it elevates the stone to a superior position. Similarly the so-called miseries and restrictions of life are meant for the elevation of the soul, and he need not chafe at them. Sorrow is the necessary condition, the complement, the other side, of happiness; and we cannot have the one without the other, any more than we can have light without darkness. Hence the "*hitākaraṇadosha*" does not hold good because there is no "*ahita*" in the world at all, our world being the best of all possible worlds. We can accordingly, on the analogy of the hammering of the stone and the transforming of it into an image, explain each pain or misery as the inevitable harbinger of good or happiness, and so absolve God from the fault alleged.

—Sūtra 24, line 6. — It will be noted that Śaṅkarāchārya here declares world-creation as forming the very nature of Brahman; and yet the world he has declared as being unreal! — According to Madhvāchārya's *dvaitavāda*, Brahman can have "*upasamhāra*" and so the objection cannot be raised at all. As a consequence he makes sūtra 24 and 25 continue the preceding discussion as to the possibility of the soul having created the world. Sūtra 24 according to him would mean: If a man can gather material to create home, why cannot he do the same and create the universe? The reply is that what man thinks he does unaided, he does only with the help and the approval of the Lord. It is not the cow who unaided produces milk; it is the Lord who created her digestive organism, who is ultimately the author of the milk. And this Lord, the next sūtra according to Madhvāchārya avers, can work unseen, as gods and ghosts are known to do, in daily experience. The boldness of the *Pūrvapakshin* who maintains the soul to be the creator of the Universe is certainly very remarkable, and would easily put to shame the vauntings of modern science! —Sūtra 24, line 8. — "As milk by nature, and without other accessories, becomes curds, so Brahman by nature produces the

world without any external material or means." This illustration—Śaṅkarāchārya is going to tell us later (II. ii. 3¹²)—is to be taken not as declaring any inherent power in the milk, unaided by a sentient controller, to produce curds. The sentient controller is there; only he does not add anything to milk (we can dispense, with buttermilk that it is usual to add to the milk to make it curdle), whereas in normal causal operations a number of extra-neous materials and instruments are required. This introjection of a sentient-creator almost takes away the very point of the illustration. It is clearly an after-thought which goes to prove that Śaṅkarāchārya at times uses against his opponents arguments that tell against his own position. It is to be noted in this connection that it is Śaṅkarāchārya himself who notices the deficiency and seeks to explain it away: he would not give the opponent the first chance.

—Sūtra 25, line 4. — Śaṅkarāchāryā takes the word "loke" in the sūtra in three different senses—

१—लोके = व्यवहारे ;

२—लोके = शास्त्रे वृद्धव्यवहारे च (लोक्यते ज्ञायतेऽर्थोऽनेनेति) ;

३—लोके = स्वयंप्रकाशे ब्रह्मणि.

—Sūtra 25, line 15ff.—The folk-lore concerning the female crane conceiving at the mere hearing of the sound of thunder does not seem to be a biological fact. And as to the explanation for the fact of a lake full of lotuses making an adjoining lake (that had no lotuses before) in time full of similar lotuses, we have to remember the part played by wind and by birds in transplanting seeds.

—Sūtra 26, line 14.—If Brahman is wholly used up in the totality of the products, whenever we see products we see the Brahman. Of course we may not see *all* the products at a time and consequently not obtain a full-orbed vision of Brahman; but provided it is a vision, the extent covered by it is immaterial: thus apparently the gist of the argument.

—Sūtra 27, line 10f.—The "Sat-samṛatti" passage is quoted in the next line. The "Hṛidayāyatana" passage is Chhāndogya viii. 3. 3—

स वा एष आत्मा हृदि । तस्यैतदेव निष्कम्—हृदि-अयमिति । तस्मा-
द्दृश्यम् ।

As a "hṛidaya" is a "vikāra" of Brahman, as being created by it, and as Brahman is to abide in one of its creations, the Creator and the creation must be conceived as distinct ; otherwise they would not have the "ādhārādheya" relation.

—Sūtra 27, line 24. —Having once conceded that the Veda is authoritative, especially in transcendent matters, the maxim "credo quia impossibile" seems to be a logical deduction from the premises. Surely we cannot presume to expect that the mystery of the Universe was planned by the Creator in such a manner that it might be readily intelligible to the finite and vacillating intellect of man, who is verily the tiniest atom in the whole universe. Man is ceaselessly trying to know and his knowledge is steadily increasing. He discards old hypotheses and invents new ones, merely to have them supplanted by still newer ones. Although in this way man's knowledge, one might imagine, has its own limitations, he at least has a right to expect that the added knowledge will merely exhibit a difference in degree, not in kind ; that it will not compel him to unlearn the "eternal" truths, for instance, the law of contradiction. But Śaṅkarāchārya is not willing to concede even that. Human reason has its own inherent contradictions, what Kant styled the "antinomies." In the words of Hegel, "Reason returns upon itself," and even śruti cannot help man with any better solution than Śaṅkarāchārya's "aghaṭitaghatanāpatīyaśī" or "sattvasattvābhyām anirvachaniyā" māyā. Śaṅkarāchārya, however, does not stop with this negative, despondent, almost sceptical attitude. There are regions which are inaccessible to human reason, but which *faith* can penetrate and *realise*. Although man's reason is admittedly weak, his *faith* is immense, is infinite. With that faith he can aspire to transcend the bonds of the flesh and *be* the Divinity itself. There is valid testimony to the reality of this experience, which is not beyond anybody's reach,—given sustained patience and an earnestness of endeavour.

—Sūtra 27, line 33. — The point is discussed by Jaimini in his *Mīmāṃsāsūtra* X. viii. 6. When we have two contradictory

statements with reference to the same ritual, what are we to do? To quote Śabara—

ननु परस्परं विरुद्धौ विधिप्रतिषेधौ न संभवतः । उच्यते । वचनप्रामा-
ण्यात् प्रतिषेधो विधिं बाधित्वा भविष्यति, विधिरपि प्रतिषेधम् ।..... ।
तदा विधिर्यदा न प्रतिषेधः, तदा प्रतिषेधो यदा न विधिरिति ।..... ।
एकं कल्पं गृहीत्वा न द्वितीयमपि गृह्णातीति । तस्मादन्यतरेण कल्पेन
सिध्यतीति ॥

—Sūtra 27, line 45. — See note to sūtra II. i. 14, line 134, above.

—Sūtra 28, line 2. — Most Bhāshyakāras understand Ātman = Jīva. If the individual soul contains within himself so many strange and contradictory powers, why should one object to God's having them? Others who take Ātman = Brahman practically intend to convey the same idea. As Vallabha says—

अर्वाचीनविकल्पविचारकुतर्कप्रमाणाभासशास्त्रकलिलान्तःकरणदुरवग्रह-
वादिनां वादानवसरे सर्वभवनसमर्थे ब्रह्मणि विरोधाभावात् ।

Madhva includes our sūtra 26 under the "Jivakartritva" adhi-
karana and discusses "Īśvarakartritva" only with sūtra 27.

—Sūtra 29, line 1.—Under II. ii. 11, 13 Śāṅkarācārya has urged the objection in question against the Sāṅkhya and the Vaiśe-
shika systems.—While in the case of the Vedāntins śrutis declar-
ed both "niravayavatva" and "paripāmitva," the Sāṅkhyas
assume "sāvayavatva" of the Pradhāna and hope thereby to
escape the fault of "kritsnaprasakti." And our argument against
the assumed "sāvayavatya" they brush aside as not valid, being
based on mere reason (line 9f). But this lands them into further
troubles.

—Sūtra 29, line 13. — The Vaiśeṣhikas explain that when two
atoms are united to produce a dvyanuka or binary-atom, there
arises in the binary a magnitude or dimension distinct from that
of the atom. But this is not due to the addition of the dimension
of one atom to that of the other. The new dimension is due to
the fact that there are two atoms: to the 'sāṅkhyā' of the atoms.
These are mere words, and Śāṅkarācārya has not lost the oppor-
tunity to expose their vacuity.

—Sūtra 29, line 16. — With sūtra 29 Śaṅkara fittingly brings the *adhikaraṇa* to a close, thereby disposing of the dilemma or the *ubhayatahpāsā rajjuh* (the double-noosed rope) involved in sūtra 26. Rāmānuja, Śrīkantha, Bhāskara, Nimbārka and Madhva regard the next two sūtras also as a part of this *adhikaraṇa*. — Apart from this, the Viśiṣṭādvaita school must find it somewhat hard to declare for the “*niravayavatva*” of the Lord when his body consists of *chit* and *achit* as its constituents. Rāmānuja’s theory is —

सूक्ष्मचिदचिद्वस्तुसरीरं ब्रह्म कारणम्, स्थूलचिदचिद्वस्तुसरीरं ब्रह्म कार्यम् ।

Creation in other words is the visible and tangible manifestation of what previously existed in a subtle and imperceptible form. If creation is *sāvayava*, the *sāvayavatva* must also be supposed to be immanent in the Creator. Hence ultimately all Bhāshyakāras have to appeal to śruti. It is *not* correct to say that the theory of Rāmānuja appeals to reason while that of Śaṅkara negates it altogether. On this point all are in the same boat.

—Sūtra 30, line 4. — It is somewhat strange that the sūtra should use the feminine word “*sarvopatā*.” The “*Parā Devatā*” referred to in *Chhāndogya* (vi. 8. 6) and elsewhere is naturally suggested as the *viśeshya*. Madhva, however, has discovered a śruti, viz.—

सर्वैर्युक्ता शक्तिभिर्देवता सा ।

which it is perhaps vain to try to trace in any extant *Saṁhitā*. The *Śvetāśvatara* passage (vi. 8)—

परास्य शक्तिर्विविधैव श्रूयते ।

is the one pointedly referred to by most Bhāshyakāras. Advantage has also been taken of the use of the feminine epithet in the sūtra, which is declared to teach the doctrine which assigns a *real śakti* (and not merely the power of illusion) to the Lord.

—Sūtra 31, line 5. — The objection beginning with “*kathamcha*” (line 5) is a characteristic insertion designed to introduce the *Māyāvāda* (see line 11 below). While sūtra 24 answers the objection on the score of the absence of any *external* means and instruments, the present sūtra considers the objection based upon the absence of all limbs and sense-organs belonging to God’s own body.

—Sūtra 32, line 6. — This seems to be the *popular* explanation of the śruti passage. It has also a deeper metaphysical significance: The love that you show to others is a reflex of your love for your own Self. In loving others you feel that you are more fully and more truly realising your own Self.

—Sūtra 32, line 1. — While the argument from design is popularly put forward to suggest an intelligent Author to the world, the same argument, it must not be forgotten, reduces the Creator to the level of the ordinary man who is immersed in a ceaseless chase after ends and after means to those ends.

—Sūtra 33, line 11. — Apravṛttiḥ: this may imply a total disinclination to create, or passivity; or even the occasionalness or kādāchitkatva of the Pravṛtti, seeing that there is no Prayojana or motive either for the God's creating or for his not-creating.

—Sūtra 33 line 12. — Like sūtra 24 this sūtra asserts creative activity as being the "svabhāva" of the Lord. This implies not unconscious or involuntary action, but action which involves no effort and no hesitation whatsoever. Our breathing becomes naturally heavy and short as we climb a hill; so the "svabhāva" can show natural adaptation to circumstances. What God does in the normal course of things appears to us as his most carefully balanced activity undertaken after the fullest deliberation. As in the case of the truly wise man, so in the case of the Lord—

यास्त्वेषां स्वैरकयास्ता एव भवन्ति शास्त्राणि ।

Śaṅkarāchārya, however, characteristically brings in his Māyāvāda and declares the whole creation as not a physical fact but an intellectual perception: see above, II. i. 18, lines 53–58, Notes.

—Sūtra 34, line 1. — In sūtra 21 the point under discussion was the Lord's treatment unto himself; in the present sūtra, it is his treatment of the other souls.

—Sūtra 34, line 15. — The analogy of the rain fails us, because while the characteristic differences of the seeds can exist independently of the rain, in the case of God there can be no diversity in the world for which he is not himself responsible.

—Sūtra 34, line 21. — The Kaushītaki passage, which seems at first sight to go against Śaṅkarāchārya, is to be so interpreted as

to conform with the *Bṛihadāraṇyaka* passage next quoted, inas-
much as the Veda can never teach contradictory things. Under-
stand *kārayati* to mean, therefore,—

पूर्वकर्मानुरोधेन कारयति ।

Nor is the Lord's independence in any way endangered by his
paying attention to the *karman* of men. As the *Bhāmatikāra*
says—

नच कर्मापेक्षायामीश्वरस्यैश्वर्यव्याघातः । नहि सेवादिकर्मभेदापेक्षः फल-
भेदप्रदः प्रभुरप्रभुर्भवति ।

—Sūtra 35, line 7.—Even in Śaṅkara's *Māyāvāda* the follow-
ing six objects are regarded as without a beginning—

जीव ईशो विशुद्धा चित् तथा जीवेशयोर्भिदा ।

अविद्या तच्चित्तोर्योगः षडस्माकमनादयः ॥

The last of these, the relation of *Chit* and *Avidyā*, is responsible
for the *Samsāra*, which as a consequence is without a beginning.

—Sūtra 36, line 1. — Rāmānuja and Nimbārka read sūtras 35
and 36 as one sūtra, while they seem to have been both ignored
by Śrīkaṇṭha.

—Sūtra 36, line 5. — *Kevala-avidyā* is like the *Sāṅkhya Pradhāna*
in a state of equipoise of its constituent *guṇas*: is incapable of
occasioning any *karman* or *bhoga*, the offspring of inequality
leading to a disturbance of the balanced pose. In the condition
of *sushupti* (deep-sleep) or of *Pralaya* (cosmic "involution") the
Avidyā is "kevalā" and occasions no continuance of activity
for the time.

—Sūtra 36, line 8. — Any inquiry started as to the ultimate ori-
gins of the *Samsāra*, it must not be forgotten, is bound to be start-
ed by one who himself is already in the *Samsāra*, floating with
the stream. He cannot possibly review the stream from a de-
tached position any more than can the denizen of the earth step
outside the earth so as to weigh it or to move it with a fulcrum.
The *Mīmāṃsā* position—*Na kadācid anidṛiṣaṁ jagat*—can in
some sense be regarded as a confession to the same point of view.

—Sūtra 36, line 14.—An anticipatory reference to a future fact one should resort to only when there is no other way out. Thus, to take a śrauta example, we are told in one context—

पुरोडाशकपालेन तुषान् उपवपति ।

“ That the husks are to be rubbed off or removed by means of the ‘ Puroḍāśa ’ plate.” This is a direction to be observed soon after the grains are pounded in order to separate the husks. The puroḍāśa cakes are to be prepared out of this very grain. How can we therefore speak of a ‘ puroḍāśa ’ plate before the puroḍāśa is cooked? But as there is no way out, we have to suppose that the plate is called ‘ puroḍāśa ’ in anticipation of its being used to cook the grain after the husk is removed and the grain turned into flour. Similar is the case with the injunction—

गृहस्थः सदृशीं भार्यामुपेयात् ।

In those cases however, where, a relation with what has gone before and what is to come is *equally* possible, the former has necessarily to be preferred.

—Sūtra 37, line 5.—That Brahman has certain “ dharmas ” or “ śaktis ” is unhesitatingly declared in this sūtra again, as in sūtra 30 before. And yet the commentary Brahmanārīṭavarshinī remarks—

तस्मान्निर्गुणत्वे ब्रह्मणो विवर्तजगदुपादानत्वमविरुद्धमिति ।

ADHYAYA SECOND

PĀDA SECOND

—Sūtra 1, line 1. — As there seems to be a *prima facie* inconsistency, diversity and even contradiction in the various statements about facts and practices that are scattered all over the "Veda," (i. e., Mantras and Brāhmaṇas,) the necessity of harmonising them in the interest of orthodoxy was very early felt. The "Śrauta-sūtras" of the the various Vedic schools undertook, each for its own specific charaṇa or for the śākhā, the task of evolving order and unity from out of the manifold *obiter dicta* of the Brāhmaṇic texts concerning sacrifices and sacrificial matters. The "Gṛhya-sūtras" did the same for the Domestic ritual, while Jaimini's (Pūrva-)mīmāṃsā-sūtras, assuming the standpoint of detachment from specific schools, and without going in too much for the minutiae of the ritual, endeavoured to build up a "science of exegesis," which could be and has been applied even to texts other than the Veda. The Pūrvamīmāṃsā-sūtras had confined their attention mainly to the Brāhmaṇic texts. The Āraṇyakas, and particularly the Upanishads—though technically forming a part of the Brāhmaṇas—were, if not actually ignored by Jaimini, at any rate relegated to the position of an "Arthavāda" (see note to II. i. 5²³). The Uttara-mīmāṃsā (= Vedānta) śāstra, differing from Jaimini as to the value and the purpose of the Upanishadic texts, essayed to harmonise the apparently divergent teachings of these texts on points such as the author and the nature of the creation, the nature of the Ātman or individual soul and his ultimate destiny, etc., by applying the very same canons of interpretation that Jaimini had evolved—only premising that the knowledge of the Reality vouched for by these texts secured emancipation in a way that the ritualistic practices of the Karmakāṇḍa (which was another name for the Pūrvamīmāṃsā) were unable to effect. The main purpose of the Vedāntaśāstra was thus primarily exegetic. The establishment of any specific metaphysical conclusion by independent ratiocination, or the overthrowing of any given theory by means of mere logical

argumentations, was admittedly foreign to its original purpose. Should this be taken to mean that the present so-called "Tarka-" pāda was felt to be an interloper into the treatise? See lines 6ff. below, and see also my paper on the "Multiple Authorship of the Vedāntasūtras," in *The Indian Philosophical Review*, II. 2, pages 141-154.

—Sūtra 1, line 8ff. — See *ante* ii. 1. 1²³⁻³¹.

—Sūtra 1, line 12ff. — For Brahmasūtra I. i. 5 see our Note on II. i. 1²⁰ before. Brahmasūtra I. i. 18 takes its stand on passages like Tait. Up., II. 6—

सोऽकामयत । बहु स्यां प्रजायेय । स तपोऽतप्यत । स तपस्तप्त्वा ।
इदं सर्वमसृजत । यदिदं किंच ॥

where the conceiving of the desire to be manifold or to procreate presupposes a sentient Creator. Brahmasūtra I. iv. 28, coming at the very end of the "Samanvaya" chapter, intends to assert that Vedāntic passages other than those actually dealt with in the chapter—in case they be interpreted in a way antagonistic to the Advaita theory—might be analogically explained in conformity with the Brahman theory.

—Sūtra 1, line 18. — This probably explains the name "Tarka-pāda." The more usual title generally given in the colophons is—"Sāṃkhyādi-matānāṃ duṣṭatvapradarśanam." The more convenient name adopted in this edition is familiar enough to Pandits and Commentators. See, for instance, Rāṅgarāmānuja's *Prakāśika* on the Kathopanishad, I. ii. 19.

—Sūtra 1, line 20ff. — The starting point of the Classical Sāṃkhya Philosophy here controverted is an absolute opposition between the subject and the object. Man is the victim of this opposition from the very first breath he draws in this world, and his earliest cry is a forlorn endeavour to get out of the range of this opposition. The opposition grows in volume as the man advances in years, and with that grows also his persistent endeavour to overcome it, bringing in its train far more grief and suffering than what it succeeds in allaying. If only the subject could remain entirely dissociated from the object, there would be an end for once and for all to all hankering, all movement,

all suffering in fact. In his true nature Purusha, the subject, is the unconcerned "witness," who is capable of seeing but incapable of action ; unchangeable in nature, but, through absence of real discrimination, imagining himself as being susceptible to change and consequent suffering ; eternally and intrinsically free, although on account of foolishly identifying himself with the exhibitions of sense and outward things, he is weltering in the bondage of Samsāra, from which discriminating knowledge or Viveka alone can bring him salvation. As the "object" is real so likewise is this bondage and the consequent suffering of the Purusha ; and as a corollary from this, it becomes necessary to believe in the existence of an infinite number of Purushas to account for the grades and varieties of human experience.

—What then is the nature of the Object, the root-cause of all this ado ? The Object is the direct contrast to the Subject. The Subject, like the lame man of the favourite metaphor, sees but cannot move : the Object, like the blind man, moves but cannot see. The one is discerning, self-subsistent, and immobile : the other non-sentient, dependent, and variable : as Īśvarakṛishṇa has put it (Kārika 11)—

त्रिगुणमविवेकि विषयः सामान्यमचेतनं प्रसवधर्मि ।

व्यक्तं तथा प्रधानम्, तद्विपरीतस्तथा च पुमान् ॥

The object, however, like the dancing-girl, spreads itself out to the gaze of the Purusha and shows him all this phantasmagoria only as long as he is immersed in an ignorance about his real nature. Once the Purusha realises his distinctness, the world vanishes from his sight utterly. Compare Kārikā 59, 66—

रङ्गस्य दर्शयित्वा निवर्तते नर्तकी यथा नृत्यात् ।

पुरुषस्य तथात्मानं प्रकाश्य विनिवर्तते प्रकृतिः ॥

दृष्टा मयेत्युपेक्षक एको दृष्टाहमित्युपरमत्यन्या ।

सति संयोगेपि तयोः प्रयोजनं नास्ति सर्गस्य ॥

And as there is an infinite number of Purushas, the object or the Prakṛiti can stand in different relations to them at one and the same time, To this effect runs the well-known "Ajā-mantra" (Śvetāśvatara Upanishad, iv. 5)—

अजामेकां लोहितशुक्लकृष्णां बह्वीः प्रजाः सृजमानां सरूपाः ।

अजो ह्येको जुषमाणोऽनुशेते जहात्येनां भुक्तभोगामजोऽन्यः ॥

—But in this very conception of the possibility of a coming-into-relation that is believed to obtain between two absolute contradictories like the Purusha and the Pradhāna lies both the strength and the weakness of the system. The relation is a real relation, not a figment of imagination, a *māyā*.—And since, according to hypothesis, the Purusha is incapable of doing anything with a view to come into relation, it is the Pradhāna or Prakṛiti that has to be thought of as having a two-fold existence : that which it puts forth when under relation, and that which belongs to it intrinsically : or, to speak in the terms of the system, an Avyakta or non-manifest and a Vyakta of a manifest form. Īśvarakṛishṇa thus differentiates the two (Kārikā 10)—

हेतुमदनित्यमव्यापि सक्रियमनेकमाश्रितं लिङ्गम् ।

सावयवं परतन्त्रं व्यक्तं, विपरीतमव्यक्तम् ॥

—The Vyakta, Avyakta, and Jña (=Purusha) thus form the three ground-principles of the system. The Vyakta is the universe as we see it; the Avyakta is the primitive “protoplasmic” condition of the same; and the evolution of this into the other is assumed to be a process taking place—under the “seeing,” it is true of the Purusha—but nevertheless as a something inevitable, self-impelled, and inwardly-regulated. The Sāṅkhyas thus seem to have superadded a personalistic factor to the generally understood conception of “evolution”—and this is by no means inconsistent with their dualistic starting point.

—The starting-point of the present-day Theory of Evolution is neither Matter alone, nor Energy alone, but rather a deft welding of the two into one; and the progress of the evolution is declared to consist in a separation of the two, and a subsequent continuous change “from indefinite, incoherent homogeneity, to definite, coherent heterogeneity of structure and function, through successive differentiations and integrations.” In a somewhat analogous fashion the Sāṅkhyas also assume, besides the initial dualism of Prakṛiti and Purusha, a bifurcation of the Prakṛiti into aspects which are directly opposed to each other. One they style the Sattva which is described as light,

luminous, fine, subtle, buoyant, joyous and so forth ; the other is Tamas which is heavy, dark, gross, coarse, stupid and joyless. And just as the "Vyakta" was the *via media* between the "Avyakta" and the Purusha, so the Sāṃkhya has found it necessary to assume a third aspect, the Rajas, which represents the process of transition from Sattva to Tamas or Tamas to Sattva. Rajas accordingly is the principle of effort, inspiration, activity, passion, and emotion. These three Qualities of Sattva, Rajas and Tamas — they are more appropriately called Constituents, or Aspects — are in a state of "equipoise" in the Avyakta. The 'seeing' by the Purusha under the influence of non-discrimination disturbs the balance and then the whole process of evolution or Parīṇāma explodes itself away altogether automatically.

—Two opposites at each of the two extremities, with a *tertium quid* by way of a bridge in between, has been the formula that the Sāṃkhya has worked out in all departments of philosophy. They recognise three means of knowledge or pramāṇas : Perception and Authority standing at the two extremities, while Inference comes between the two as possessing an element of each. The smoke, for instance, has to be seen, the smoke-fire relation to be taken for granted. — Again, there are the three kinds of senses, mind, the middle one, partaking of the nature of the five organs of sense on the one hand, and the five organs of action on the other. — Between the percipient Self and the gross elemental world outside, once more, it is the psychological organism of man (technically called the *liṅgam*) that forms the connecting link ; and in order that it should be the proper *via media*, the Sāṃkhya has made it consist of not only the eleven Indriyas above enumerated, but also of the five Tanmātras (Aviśeṣhas) or subtle-forms of the elemental world (Viśeṣhas) outside.

—A peculiarity of the Sāṃkhya psychology that deserves to be noted is the position that is therein assigned to Buddhi (intellect) and Ahankāra (" I "-notion). Mahat or Buddhi is the very first product of the Prakṛiti following directly upon the first 'seeing' of the Purusha, when the equipoise of the three guṇas is just disturbed. It is, so to say, the Prakṛiti illuminated or intellectualised ; awakened from its dull torpor and presenting to the sentient Purusha cosmic forms in a way that he can apprehend. As we have seen (II. i. 4³¹, Note), Buddhi is, according to the

Sāṅkhyas, non-sentient ; but it is not exactly dull, inert, matter. It comes midway. It consists of the finer, subtler forms of matter so transmuted as to become objects of *immediate* perception to the Purusha.—When the Purusha thereafter comes to establish, through the Buddhi, a relation with the outward, world, there grows in him a sense of ownership or of self-consciousness (a product of *aviveka*) which is represented by the next step in the Sāṅkhya cosmology, namely, *Ahaṁkāra*. We must not make the mistake, however, of regarding these stages as happening in time. They are rather ideal. This circumstance as well as the fact that the Sāṅkhyas have introduced idealistic terms in the midst of their cosmological theory suggest a possibility of the system having been originally idealistic in the sense of having recognised only one Purusha (see the Note to Sūtra 10, line 2, below). The admission of a multiplicity of knowing Subjects is, in fact, inconsistent with the true notion of the Subject. But we cannot go out of our way to discuss that large question here in all its bearings.—Other details of the system will come up for discussion in the course of the text itself.

—Sūtra 1, line 21.—The *Bāhya-bhedas* include the whole universe of physical existences : the conditions or environments within which the individual is placed and which produce the pleasure-pain-infatuation experience of *Samsāra*. The *Ādhyāt-mika-bhedas* include the physical body within which the individual functions, including the psychical-apparatus of the mind, intellect, etc. The “body” also is the abode of all kinds of pleasure-pain-infatuation experiences.

—Sūtra 1, line 22.—See Note to II. i. 4, line 22f.

—Sūtra 1, line 25.—The use of the verb *vivartate* for *pariṇamate* by the Bhāṣhyakāra is somewhat strange, and has to be understood as *vividhaṁ vartate*. The Sāṅkhyakārikā (15 f.) referred to by Śaṅkarācārya runs thus—

भेदानां परिमाणात्, समन्वयात्, शक्तिः प्रवृत्तेश्च, ।
कारणकार्यविभागाद्, अविभागाद्वैश्वरूप्यस्य ॥
कारणमस्त्यव्यक्तम्. ।

The five arguments establishing the existence of the Pradhāna or the Avyakta are : (i) The discrete and finite existences in the world have the Avyakta or Pradhāna as their cause, inasmuch as they necessarily presuppose a formless, and infinite something as their source and back-ground. (ii) In spite of the apparent diversity, the various objects in the world seem to exhibit a basic homogeneity (samanvaya) which points to their common origin. (iii) All wordly happenings proceed from, and are regulated by a power or energy which presupposes a common exhaustless source of this power. (iv) The universality of the Law of Causation, which enables us—working backwards from the effects—to reach a First uncaused Cause. And (v) the merging of all the cosmic phenomena, subsequent to their destruction, into their respective cause, which leads inevitably to the postulate of an ultimate something into which the whole universe is funded back after Dissolution. Śaṅkarāchārya is shortly going to criticise most of these arguments. No. 1 in line 43-45 ; No. 2 in lines 39-43 ; No. 3 in Sūtra 2 ; and No. 4 (and by implication No. 5) in lines 45-47.

—Sūtra 1, line 35 ff.—Śaṅkarāchārya means to say that even if we grant the rule of “ Like cause like effect,” still, seeing that when the cause is two-fold—constituent and efficient—why not make the effect, in a few cases at any rate, resemble the *efficient* cause? Rather than arguing from the non-sentient constituent cause of effects back to the first non-sentient constituent cause, namely the Pradhāna, what is there to prevent us arguing from the efficient and sentient causes of products (e. g. the potter of the earthen-pot) back to the first efficient cause, which must be a sentient Person or God? The argument becomes yet stronger if the sentient first cause is both the constituent and the efficient causes in one.

—Sūtra 1, line 39. —“ Anumātavyam bhavati ” is the paraphrase for the word “ anumānam ” in the sūtra. The inference establishing Pradhāna as the first cause—namely, that in Kārikā 15, above quoted—is not valid, says the sūtra. The word “ Anumāna ” is used in the sense of “ inference ” by the Sūtrakāra in two other places: I. ii. 25 and I. iii. 28, in both of which the anumāna is not the Sāṃkhya anumāna. In I. i. 18 and I. iii. 3, however, the word “ Anumāna ” is used, in the interpretation of the majority

of the Bhāshyakāras, almost as equivalent to Pradhāna. Elsewhere the Sūtrakāra has used the word "Ānumānika," i. e., what is established by inference, as a synonym for Pradhāna; see, for instance, sūtra I. iv. 1.—

आनुमानिकमप्येकेषामिति चेन्न, शरीररूपकविन्यस्तग्रहीतेर्दर्शयति च ।

The Sāṅkhya Pradhāna seems to have been thus nick-named by way of a ridicule; and the word "Āśabdān" in sūtra I. i. 5 might have been used as a by-word for Pradhāna for the same reason. Compare also the use of the word "Smārta" in I. ii. 9 in the sense of Pradhāna. In accordance with the maxim—

सति प्रसङ्गे प्रतिषेधो भागी भवति ।

the present nick-name must have attained vogue after the demonstrated failure of the Sāṅkhya attempt to find Vedic backing to their theory. — The word "cha" in the sūtra is taken to be equal to "tu" by some; but it is perhaps better to bring it in relation with the "cha" of the next sūtra.

—Sūtra 1, line 40. — "Anvaya" stands for the "Samanvaya" of the Kārikā above quoted. See Note on I. ii. 4, line 22f.

—Sūtra 1, line 42. — The following extract from the Bhāmatī brings out the exact point of the argument—

यदि पुनरेते (बाह्या) एव सुखदुःखादिस्वभावा भवेयुस्ततः स्वरूप-
त्वाद्धेमन्तेऽपि चन्दनः सुखः स्यात् । नहि चन्दनः कदाचिदचन्दनः । तथा
निदाशेष्वपि कुङ्कुमपङ्कः सुखो भवेत् । नह्यसौ कदाचिदकुङ्कुमपङ्क इति ।
एवं कण्टकः क्रमेलकस्य सुख इति मनुष्यादीनामपि प्राणभृतां सुखः
स्यात् । नह्यसौ काश्चित् प्रत्येव कण्टक इति । तस्मादसुखादिस्वभावा अपि
चन्दनकुङ्कुमादयो जातिकालावस्थाद्यपेक्षया सुखदुःखादिहेतवो, न तु
स्वयं सुखादिस्वभावा इति रमणीयम् ॥

The Sāṅkhyas could have met this argument in Śaṅkarāchārya's own words; see (II. i. 24, lines 11-12)—

यदि च स्वयं दधिभावशीलता न स्यात्, नैवौष्ण्यादिनापि बलाद्धि-
मावमापयेत् ।

although the two cases are not exactly on a par.

—Sūtra 1, line 43.—Samsarga has been defined in the Kalpataru as—

नानात्वेन सहैकस्मिन्नर्थे समवेतः संसर्गः ।

and by Ānandagiri as—

अविभक्तमेकमनुगतं वस्तु संसर्गशब्देन लक्ष्यते ।

*The argument is the same as that implied in the Spencerian formula of Evolution above quoted (Notes p. 60). The interaction of the manifold and the heterogeneous (which leads to individualisation) presupposes some homogeneous entity as their starting point. All things in the world are “parimita,” that is to say, manifold and heterogeneous; and therefore the Prakṛiti must be one and uniform. This is how Vāchaspati in his Tattvakaumudī seems to understand the argument. Sāṅkarāchārya understands it somewhat differently. Samsarga according to him does not mean “continuity of a pervading characteristic,” but rather “the coming together into causal contact or cohesion” of entities which are going to produce effects that are limited (parimita) in space, time or nature. The three qualities have *parimitatva* at least in the last sense. Hence they must be regarded as effects presupposing a causal samsarga of other entities, and so on.

—Sūtra 1, line 45.—“Parimitatva” can signify either (a) definiteness in dimensions, or (b) limitation of duration, or (c) differentiation in characteristics. The first is a case of *deśato parimitatva* and is not applicable to the Ākāśa which, being a product, ought to be parimita and samsargapūrvaka. The second is a case of *kālato parimitatva*; but, as before observed, the Sāṅkhyas do not recognise time as a distinct entity (cp. Sāṅkhyatattvakaumudī on Kārikā 33; “*kṛitam atra antargaduṇā Kālena*”), causation being for them more or less an ideal process. As to the third case of *vastutah parimitatva*, that holds true in the case of the three aspects of Sattva, Rajas, and Tamas, each of which possesses a nature distinct from that of the others; and yet the Sāṅkhyas regard these three aspects as infinite and eternal, and as making up the composition of the Prakṛiti. Compare the following description of these guṇas—

अन्योन्यमिथुनाः सर्वे सर्वे सर्वत्र गामिनः ।

नैषामादिः संप्रयोगो वियोगो वोपलभ्यते ॥

The same remark can apply also to the Chit-śakti of the Puruṣa. —Sūtra 1, line 47. — The argument from design and from the natural adaptation that is perceptible in Nature, which Śāṅkarāchārya here uses to rebut a non-sentient first cause, is familiar enough to students of Philosophy. The question to determine is whether this design or adaptation is actually present in the world, or whether man has projected it there from his own knowledge of the working of his own mind. We all have heard of the pious missionary who, when he saw the cork-tree for the first time, reverentially ejaculated : “ How benign is Providence that He should have so plentifully supplied stoppers to our bottles ! ” The poor divine forgot that the same Providence has also, and more plentifully, supplied stones for breaking our bottles ! Then as to natural adaptation, of which modern Biology seems to offer such convincing examples, does not there exist also considerable waste in Nature ? “ Of fifty seeds, She often brings but one to bear ” — as Tennyson observes. The stern logic of facts like these might turn a man to sheer pessimism. Only, as Tennyson says,—

Oh yet we trust that somehow good
Will be the final goal of ill ;
To pangs of nature, sins of will,
Defects of doubt, and taints of blood ;
That nothing walks with aimless feet ;
That not one life shall be destroy'd,
Or cast as rubbish to the void,
When God hath made the pile complete ;
That not a worm is cloven in vain ;
That not a moth with vain desire
Is shrivell'd in a fruitless fire,
Or but subserves another's gain.
Behold, we know not anything ;
I can but trust that good shall fall
At last—far off—at last, to all,
And every winter change to spring.

We cannot, in other words, reach finality by the path of mere reason. The argument from design or *Rachanā* can convince only those that do not need to be convinced. To others it is a *petitio principii*.

—Sūtra 2, line 1. — The Sāṃkhya, as we have seen, had argued that as there is a good deal of expenditure of energy—a ceaseless action and reaction between all manner of forces—it must all originate from a First Cause which is capable of activity, viz., the Prakṛiti, and not from a sentient Creator who is admittedly nirguṇa and nishkriya. Śaṅkarāchārya is now going to show the flaws in their line of reasoning. — The three Guṇas which, prior to creation, had balanced each other have their equipoise disturbed by one of the three being more dominant (aṅgin), the other two being for the time its aṅgas or subsidiaries.

—Sūtra 2, line 6. — We supply the word “anupapatteḥ” from the first sūtra. The sūtras 1 and 2 are given as one continuous sūtra by both Rāmānuja and Śrīkaṇṭha. Rāmānuja, moreover, does not take “Pravṛtiteḥ” as a genitive, but as an ablative. He paraphrases this part of the sūtra by—

तज्ज्ञाधिष्ठितस्य कार्यारम्भप्रवृत्तेर्दर्शनात् ।

But whether we say that the Pravṛitti of the Pradhānā is inexplicable, or that only the sentient can properly have the Pravṛitti, there is no difference in the essential argument. Vallabha restricts the application of the present sūtra. In the first sūtra it was urged that the Sāṃkhya Pradhāna could not have produced houses, temples and other inanimate parts of the creation. Here it is intended to assert that the same Pradhāna could not have produced bodies of animals that ensue from a mixture of parental semen and blood. But what is the ground for this restriction ?

—Sūtra 2, line 9 ff. — The words “na tvachetana-samyuktasya chetanasya pravṛittir drishtā” can be assigned to the Siddhāntin who argues that the one from whose contact movement results is the one to whom Pravṛitti must be attributed. Such an one is the Chetana whose contact produces the Pravṛitti in inert matter, and not the Prakṛiti whose contact can be alleged to have produced Pravṛitti in the Chetana. As an alternative, the words can be assigned even to the Pūrvapakshin, who lays stress upon

the fact of the Pravṛtti being observed in the Prakṛiti, and never in the Chetana who, in fact, is not an object of perception at all. The matter is eventually referred to the Madhyastha for arbitration. — We see the chariot moving: we know that it can move only when joined to the sentient horse. The motion therefore belongs to the chariot, but its *source* is the horse. The fact of the matter seems to be that the motion is neither from the chariot, not from the horse, but *from their combination*. And if this combination is, like the dream-world, a merely false fabrication, the Chetana remains in reality unaffected by the Pravṛtti. If that be so, the question arises why, in the phenomenal world at any rate, Śaṅkarāchārya should have objected to the Pravṛtti being assigned to the Prakṛiti. But here Śaṅkarāchārya's reply is clear. Because Pravṛtti is phenomenal, that is no reason why even in the phenomenal point of view, it should have been assigned to the wrong source, to where even the commonsense point of view is loath to assign it. The Chārvākas, who can be selected as the typical champions of the common-sense point of view, assign Pravṛtti to the driving body of the charioteer, the body being actuated by chaitanya which, according to them, is not a new substance like the Ātman, that effects a lodgment into the body from without, but rather a result of the combination of the four elemental constituents of the body. Chemical combinations are always known to produce in bodies properties that did not exist there previously. The Pūrvapakshin evokes the help of the Lokāyatikas, who, he says, not only assign Pravṛtti to the body but even endow it with Chaitanya, the Ātman as a separate entity not being admitted by them at all. The Siddhāntin on the other hand points out that before assigning Pravṛtti to the body the Lokāyatikas had to endow it with Chaitanya, thus proving that Pravṛtti is the consequence of the Chaitanya.

—Sūtra 2, line 11. — “Ubbayoḥ,” explained by the commentators as “Pravṛtti-tadāśrayayoḥ” and accordingly translated by us, can also mean “unto both the parties to the disputation.” The sentence beginning with “Na tu pravṛtityāśrayatvena” is a paraphrase of the sentence “Na tvachetana-saṁyuktasya” etc., in line 8 above.

—Sūtra 2, line 21 ff. — Although according to Śaṅkarāchārya's ultimate point of view there is no such thing in reality as Pra-

vṛitti, he has to explain how, even from the phenomenal point of view, the Ātman who is of the nature of mere intelligence can possibly be said to be the source of any activity. Śaṅkarāchārya does it by adducing two analogies which, as being frequently requisitioned by the Sāṅkhyas themselves, he readily persuades his opponents to accept (see below sūtra 7, line 3ff.).

—Sūtra 2, line 25. — As the Bhāmatī explains—

सांख्यानं हि स्वदेशस्था रूपादय इन्द्रियं विकुर्वते, तेन तदिन्द्रियमर्थं
प्राप्तमर्थकारेण परिणमते ।

Modern science conceives of the external objects—i. e., light-rays or sound-waves from them,—as coming up to our senses. Indian psychology generally conceived of the senses as going out to meet the objects. The doctrine is known as “indriyāpām prāpya-karitā,” and the discussion centres particularly about the eye and the ear, the remaining senses being admittedly “Prāpyakārin ”

—Sūtra 2, line 27. — Śaṅkarāchārya endows God with some śakti or power (see sūtra II. i. 33) with a view to explain his “pravartakatva.” But if the pravartakatva be itself phenomenal, the śakti becomes equally so, and cannot, accordingly, vitiate the God’s unique purity and absoluteness. Commentators like Bhāskara frankly accept this śakti as the real characteristic of the Brahman.

—Sūtra 3, line 3. — The Sāṅkhyas have themselves used both these similes. In kārikā 16 the Pradhāna is said to assume modifications like water ; while kārikā 57 brings in the milk-simile as follows—

वत्सविवृद्धिनिमित्तं क्षीरस्य यथा प्रवृत्तिरज्ञस्य ।

पुरुषविमोक्षनिमित्तं तथा प्रवृत्तिः प्रधानस्य ॥

The simile of the water has been explained in the Sāṅkhyatattva-kaumudī in the following words—

यथाहि वारिदविमुक्तमुदकमेकरसमपि तत्तद्भूविकारान् आसाद्य नारिकेल-
तालतालीबिल्वचिरबिल्वतिन्दुकामलकप्राचीनामलककपित्थफलरसतया परि-
णमन् मधुराम्ललवणतिक्तकषायकटुतया विकल्प्यते, एवमेकैकगुणसमुद्भवात्
प्रधानगुणाः परिणामभेदान् प्रवर्तयन्ति ।

It will be seen that Śaṅkarāchārya understands the second simile

somewhat differently. Rāmānuja agrees with Śāṅkhyatattva-kaumudī in his interpretation of the second simile, but understands the first as referring to the change of milk automatically into curds. Vallabha agrees with Śāṅkara in the interpretation of the second simile but refers the first to the formation of cream etc. on the milk. Madhva interprets the two similes in the same way as Vallabha, only adding a Śruti (?) passage—

एतेन ह वा पयो मण्डं भवति ।

in support of his interpretation of the first simile. Bhāskara agrees with Śāṅkara as regards both the similes. The most thoughtful and thorough-going interpretation, however, is that of Nimbārka who makes each of the Upamānas explain both the "Rachanā" and the "Pravṛtti"—

पयो यथाचेतनमेव दध्यात्मना स्वतः परिणमते वत्सविवृद्धये स्वयं प्रवर्तते च, यथाचाम्बु पार्जन्यं विविधभौमरसरूपेण हिमबुद्बुदादिरूपेण च परिणमते वृक्षादिविवृद्धये स्वयं प्रवर्तते स्यन्दते च तथैव चेतनानपेक्षं प्रधानमपि ।

Vijñānabhikṣu's interpretation is exactly analogous, the word "Rachanā" being explicitly used by him in place of the "Pariṇāma" in the above extract.

—Sūtra 3, line 10.—Having asserted that there is a chetana who is responsible for the gushing out of the milk from the cow's udder, Śāṅkarāchārya goes on to say that this chetana source of pravṛtti is the cow whose affection sets the flow, and perhaps also the calf whose sucking helps the same (see line 8-9, "vatsachoshanena" etc.). Or the choshana may be understood as additional proof for the existence of affection on the part of the cow who permits the calf's sucking. Should some hypercritical objector urge against this that the cow whose calf is dead still continues to yield milk and that it can therefore be neither the affection for the calf, nor the calf's sucking, the reply is given by Śrīnivāsa as follows—

ननु च मृतेपि वत्से पयसो भावो दृश्यते, वत्सस्नेहात्पयः प्रवर्तयन्तीत्युक्तमिति चेन्न, तदा वत्सानुस्मृतेः । अथवा स्वामिस्नेहात् तथात्वोपपत्तेः ।

—Sūtra 3, line 15.—See note to II. i. 24, line 8, before. Śāṅkarāchārya is here hardly convincing. We may perhaps grant that

milk of itself becoming curds is a “lokadr̥ṣṭi” as the example itself is taken from daily life. But the necessity of God as the inward controller of everything is hardly a “sāstradr̥ṣṭi” in the real sense of the term. For, has not the Āchārya himself declared (II. i. 14 ¹⁵⁷⁻¹⁶⁰) that there is no such thing as the controlling Lord and the controlled creation from the point of view of ultimate truth? Or have we to distinguish the “sāstradr̥ṣṭi” from the “paramārthadr̥ṣṭi”?

—Sūtra 4, line 1 ff. — The words of the sūtra have been variously interpreted —

श्रीकण्ठ, निम्बार्क	{ [प्रधान] व्यतिरेकेण [कस्यपि प्रवर्तकस्य] अनवस्थिते: [=अविद्यमानत्वात्], [तस्य प्रधानस्य च प्रवृत्तिनिवृत्त्योः] [अनपेक्षत्वात् [=निरङ्कुशत्वात्] [अनवस्थादोषः] ।
वल्लभ, रामानुज	{ [प्रधानस्य प्रवृत्तिनिवृत्त्योः] अनपेक्षत्वात्, [तस्य] [प्रवृत्ति] व्यतिरेकेण अनवस्थितेः [=सदैव प्रवृत्तिशीलत्वेन अवस्थितेः], [प्रलयाभावप्रसङ्गः] ।
विज्ञानभिक्षु	{ [प्रधान] व्यतिरिक्त [कारणस्य] अनवस्थितेः [=अनभ्युपगमात्], [कारणान्तरस्य] अनपेक्षतया [प्रधानं न जगदुत्पत्तिसमर्थम्] ।
मध्व	{ [ईश्वर] व्यतिरेकेण [क्रियामात्रस्य] अनवस्थितेः [=असंभवात्], [प्रधानस्य] अनपेक्षा ।

If we ignore the last two interpreters, it is clear that there is not much vital difference of opinion amongst the rest. It has to be admitted, however, that Śāṅkarāchārya is not quite fair to the Sāṅkhyas when he says that Śāṅkhyas admit no principle beyond the triguṇātma-Pradhāna to regulate the course of creation. Even if we agree to ignore the Puruṣa (the possibility of his being the cause of Pravṛtti is discussed in sūtra 7 below) yet there are the karmavāsanās that might very well serve as the motive for Pradhāna's Pravṛtti. Bhāmati, alive to this deficiency in the Śāṅkarabhāṣya, endeavours to meet it as follows—

यद्यपि सांख्यानामपि विचित्रकर्मवासनावासितं प्रधानं साम्यावस्थाया-
मपि, तथापि न कर्मवासनाः सर्गस्येशते ।.....प्रतिबन्धकापनयन-
साधने [हि] धर्माधर्मवासने.....[यथाहि क्षेत्रकारी केदारादपां

पूर्णात् केदारान्तरं समं निम्नं वा पिप्लावयिषुरपो न पाणिनापकर्षति, किंतु वरणं तासां भिनत्ति, भिन्ने तस्मिन् स्वयमेवापः केदारान्तरं प्लावयन्ति तद्वत्] स्वयमेव प्रधानमनपेक्ष्य सृष्टौ प्रवर्तते । [अतः] आगन्तोरपेक्षणीयस्याभावात् [प्रधानं] सदैव साम्येन परिणमेत, वैषम्येण वा, न त्वयं कादाचित्कः परिणामभेद उपपद्यते ॥

It follows therefore that karmavāsanās or dharmādharmāu (vide sūtra II. i. 34¹³⁻¹⁸ ff.) are mere external conditions for the manifestation of Pravṛtti; the impulse to Pravṛtti—like the tendency to flow down to a lower level in the case of the field-water—must be from within. And if it is to be a Pravṛtti that is to appear at specific times, there must be an intelligent principle like God to determine when Pravṛtti should or should not appear. Mere non-sentient Pradhāna cannot possess such discriminating power.

—Sūtra 5, line 1. — Vallabha remarks that while the earlier sūtras pointed out the impossibility of the Pradhāna being the active agent (karṭṛitvam), the present and the following sūtras challenge the parīṇāma of the Pradhāna. Madhva commences a new adhikaraṇa with this sūtra directed against the Sēśvara Sāṃkhya view which admits a God, but regards him only as the efficient or nimitta-kāraṇa of the world. The other Bhāshya-kāras generally agree as to the interpretation of this sūtra.

अन्यत्र = धेनोरन्यत्र—शंकर, श्रीकण्ठ, रामानुज, भास्कर, निम्बार्क,
विज्ञानभिक्षु;

अन्यत्र = शृङ्गादौ—वल्लभ;

अन्यत्र = ईश्वरादन्यत्र (तत्प्रेरणां विना)—मध्व;

अभावात् = क्षीराकारपरिणामाभावात्—मध्वेतरभाष्यकाराः;

अभावात् = जगदुत्पत्त्यभावात्—मध्व.

—Sūtra 6, line 1 ff. — The sūtra is read by Rāmānuja and by Śrīkanṭha after our sūtra 9, but their interpretation is the same practically as that of Śaṅkara. Madhva is most peculiar in making a new Adhikaraṇa of this sūtra, which he directs against the Chārvāka or Lokāyatika system. As that system does not believe in dharma, adharma, god, heaven, soul, rebirth,

etc., and as, in fact, it admits the Pratyaksha as the only valid means of knowledge, its own Sāstra, believed in by the followers, cannot be a valid means of knowledge, since it is not of the nature of Pratyaksha. So the system goes against itself (arthābhāva=svavyāghāta), and we need no more discuss it here.

—Sūtra 6, line 6. — The “ pratijñā ” is expressed in the following Sāṃkhyakārikās (57, 58 and 60)—

वत्सविवृद्धिनिमित्तं क्षीरस्य यथा प्रवृत्तिरज्ञस्य ।

पुरुषविमोक्षनिमित्तं तथा प्रवृत्तिः प्रधानस्य ॥

औत्सुक्यनिवृत्त्यर्थं यथा क्रियासु प्रवर्तते लोकः ।

पुरुषस्य विमोक्षार्थं प्रवर्तते तद्वदव्यक्तम् ॥

नानाविधैरुपायैरुपकारिण्यनुपकारिणः पुंसः ।

गुणवत्यगुणस्य सतस्तस्यार्थमपार्थकं चरति ॥

—Sūtra 6, line 8ff. — The Sāṃkhyas may urge that in the Vedāntic position also no better motive for world-creation can be shown. The Ātman, being pure and stainless by nature, need not have at all fallen into the vortex of Samsāra, but might have for ever remained in his absolute oneness with Brahman: and Brahman itself need not have evinced a desire for creation. The solution of the problem given in II. i. 32, 33, 35 might have been adopted even by the Sāṃkhyas. The Advaitin's *ultima ratio* would be of course the “ajātivāda.” The world does not really exist, and so all the problems in the world—solved or unsolved—are no problems at all. As the Sāṃkhya is a realist, and his Pradhāna, an entity different from the Vedāntic Māyā, such a cutting away of the Gordian knot—whatever its value—is unavailable to the Sāṃkhya.

—Sūtra 6, line 9. — For the first anirmokshaprasaṅga (line 9) compare the Bhāmati—

येनहि प्रयोजनेन प्रधानं प्रवर्तितं तदनेन कर्तव्यम् । भोगेन चेत् प्रवर्तितमिति तमेव कुर्यान्न मोक्षम्, तेनाप्रवर्तितत्वात् ।

For the second anirmoksha (line 11) compare—

भोगस्य च सकृच्छब्दादुपलब्धिमात्रादेव समाप्तत्वाच्च तदर्थं पुनः

प्रधानं प्रवर्तते, इत्ययत्नसाध्यो मोक्षः स्यात् । निःशेषशब्दाद्युपभोगस्य चानन्त्येन समाप्तेरनुपपत्तेरनिर्मोक्षप्रसङ्गः ।

And for the third (line 15)—

पुरुषो हि दृक्शक्तिः.....प्रधानं च सर्गशक्तिः । यथाहि प्रधानस्य सर्गशक्तिरेकं पुरुषं प्रति चरितार्थापि पुरुषान्तरं प्रति प्रवर्तते, अनुच्छेदात्, एवं दृक्शक्तिरपि तं पुरुषं प्रत्यर्थवत्त्वाय, अनुच्छेदात्, सर्वदा प्रवर्ततेत्यनिर्मोक्षप्रसङ्गः ।

—Sūtra 7, line 1ff. — Except Madhva and Vijñānabhikṣhu, all Bhāṣhyakāras are unanimous in referring this sūtra to the theory contained in Sāṅkhyakārikā 21—

पुरुषस्य दर्शनार्थं कैवल्यार्थं तथा प्रधानस्य ।
पङ्गवन्धवदुभयोरपि संयोगस्तत्कृतः सर्गः ॥

Madhva refers the sūtra to a section of the Śeṣvara-Sāṅkhyas who, although admitting a god, assign to him a very secondary position in the creation. Madhva, like Vijñānabhikṣhu, makes it only one *drishtānta*, viz., the stone-carrier carrying stones on his head, or on the back of the camel. Madhva refutes the objection by merely quoting a Śruti—a very questionable procedure in what is designated as “Tarkapāda.” Bhikṣhu says that the camel does not carry the load of his own free will and for the sake of his master : nay, he has to be cudgelled to do it.

—Sūtra 7, line 15f. —The objections which Śāṅkarācārya here urges against the Sāṅkhya are just the objections which Keith (*The Sāṅkhya System*, p 76) also reiterates against the system. The apology which Śāṅkarācārya offers in favour of some of his own similes (e. g., under II. i. 25, lines 19ff.), the Sāṅkhyas could possibly have offered even for their own similes ; but as the Sāṅkhyas take their stand on ratiocination alone, they have to find out other similes that would exactly meet the case. None such are available. The Advaita system on the other hand takes its ultimate stand on the Śruti, and can afford to ignore even the most universal Laws of Reason, to say nothing of its final appeal to the “Māyā” doctrine.

—Sūtra 8, line 1ff. — Madhva and Vallabha regard the “ anga-
aṅgin ” relation intended as that between the Puruṣa and the
Prakṛiti, Vallabha adding further—

पुरुषस्याङ्गित्वे ब्रह्मवादप्रवेशो मतहानिश्च । प्रकृतेरङ्गित्वे त्वनिर्मोक्षः ।
अनेन परिहृतोपिमायावादो निलज्जानां हृदये भासते ।

But on the Śāṅkhya premises of Dvaita, the question of a rela-
tion of the principal and the subordinate between the Prakṛiti
and the Puruṣa cannot arise at all.

—Sūtra 8, line 4. —Sāṅkhyasūtra i. 61 reads —

सत्त्वरजस्तमसां साम्यावस्था प्रकृतिः ।

and the question at issue is to find out an adequate cause that
might disturb the original equipoise of the guṇas. It must be
something outside the Prakṛiti and something that can be perio-
dic or kādāचित्ka. The “ seeing ” by the Puruṣa is continuous
and unending, and will not serve the purpose.

—Sūtra 9, line 1ff. — According to Madhva, sūtras 7 and 8 refute
the “ Puruṣopasarjana-Prakṛitikartritva ” theory of a section of
the Śeṣvara-Śāṅkhyas, while sūtras 9 and 10 refute another
section of the same, maintaining the “ Prakṛityupasarjana-
Puruṣakartritva ” theory. It is clear that as sūtra 10 seems to
be the final flourish of the attack we cannot distribute sūtras
II. ii. 1-10 into more than one Adhikaraṇa.

—Sūtra 9, line 4. — “ Vastu triguṇam chalam cha guṇavṛttam ”
is a line frequently quoted, particularly the latter part of it, as
for example in the Yogasūtrabhāṣya to ii. 15, iii. 13, iv. 15, etc.,
and it is ascribed to Pāñchasikha.

—Sūtra 9, line 6. — The “ anyathānumāna ” takes its stand upon
the inherent nature of the guṇas to be constantly changing. Just
as a number of continually moving and clashing balls might,
by a fortuitous equalisation of opposing forces, be thrown into a
momentary and even a periodic equilibrium, so might it happen
in the case of the three constituents of the Prakṛiti. Or, we might
even assume that the nature of the guṇas is such that they auto-
matically and at stated periods lend themselves to being thrown

into an equilibrium. 'The objection against such a view is that we will have to assume that the course of the Universe, like the hands of a clock, will keep on continually repeating its circuit æon after æon in an exactly identical manner. This will do away with every variety and every freedom of the will. But if we want variety and if we want to assume freedom for the Purushas there must be a sentient power to regulate the course of creation.

—Sūtra 10, line 1ff. — Madhva, Vijñānabhikṣhu, Nimbārka, and others interpret the "vipratishedha" to be that between the Sāṅkhya and the Vedāntic texts, rather than the internal contradictions of the system. This is hardly correct.

—Sūtra 10, line 1. — Seven indriyas are made up by the reduction of all sense perceptions obtained from the five sense-organs to the most primitive of them all: *viz.*, the sense of touch. The doctrine is interesting. Modern evolutionary psychology would readily subscribe to it. But it is not known from what Sāṅkhya text Śāṅkarācārya has derived this information. The extant texts give no indication of it, and it is quite likely that Śāṅkarācārya is here referring to texts now no longer available. Compare in this connection the following extract from Śrīdhara's Nyāya-kandali, page 45—

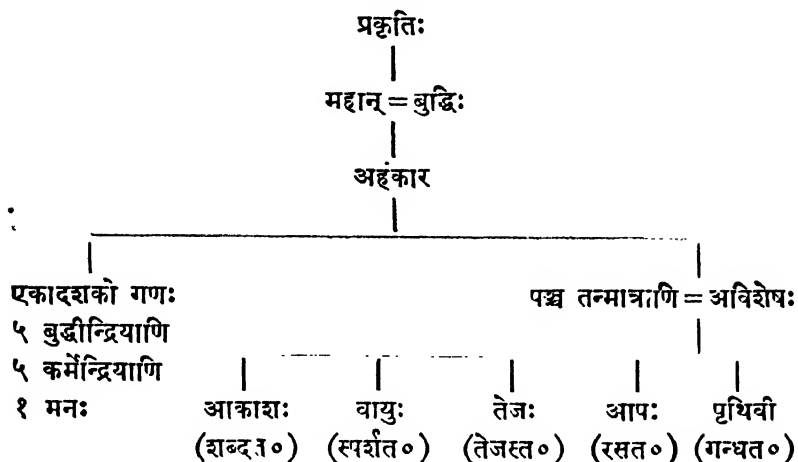

त्वचा सर्वेन्द्रियाधिष्ठानानि व्याप्तानि । सत्यां त्वचि रूपादिग्रहणमसत्या-
मग्रहणमिति त्वगिन्द्रियं सर्वार्थं नतु स्पर्शमात्रग्राहकमिति केचित् । तद-
युक्तम् । अन्याद्यभावप्रसङ्गात् । तत्तदधिष्ठानभेदेन शक्तिभेदाभ्युपगमे प्रका-
रान्तरेणेन्द्रियभेदाभ्युपगमः ॥

The Sāṅkhya doctrine is immediately connected with the doctrine of "Prāpya-kāritā," for which see our Note to II. ii. 2, line 25, above.

—Sūtra 10, line 2. — The Sāṅkhya account of cosmogenesis is given in the following Kārikās—

मूलप्रकृतिरविकृतिर्महदाद्याः प्रकृतिविकृतयः सप्त ।
षोडशकस्तु विकारो, न प्रकृतिर्न विकृतिः पुरुषः ॥३॥
प्रकृतेर्महांस्ततोऽहंकारस्तस्माद्गुणश्च षोडशकः ।
तस्मादपि षोडशकात् पञ्चभ्यः पञ्च भूतानि ॥ २२ ॥

It can be thus exhibited in a tabular form :—

It is to be noted in this connection that Mahat, Ahankāra and the eleven indriyas can each of them be Sāttvika, Rājasa, or Tāmasa according to the guṇa that happens to be predominant. Just what specific guṇa is to be predominant in any particular case will depend upon the Karmavāsanās or subliminal impressions of the individual Puruṣa for whom Prakṛiti is displaying her modifications. This means that these modifications are different for different Puruṣas. They would accordingly hardly fit in as so many steps in the process of world-creation, unless that world-creation be for *one Puruṣa only*. The text-books of the system regard Mahat, Ahankāra and the rest as cosmic entities, that is, as functions of the Virāt-Puruṣa or Hiraṇyagarbha. Herein we see a realistic superstructure built upon an original idealistic foundation.

—Sūtra 10, line 3.—What Sāṅkhya texts Śaṅkarachārya actually has in his mind we have no means of ascertaining. None of the extant texts drop the intermediate step of Ahankāra between Mahat and the Tanmātras. We can however see the reasonableness of the omission. Ahānkāra, is psychologically speaking, a function of the mind, and is therefore best regarded as an aspect of it. On this point compare the Vedāntaparibhāṣā—

एवंविधवृत्तिभेदेन एकमप्यन्तःकरणं मन इति, बुद्धिरिति, अहंकार इति चिच्चमिति व्याख्यायते । तदुक्तम्—

मनोबुद्धिरहंकारश्चित्तं करणमान्तरम् ।

संशयो निश्चयो गर्वः स्मरणं विषया अमी ॥

The three *antahkaranas* are the *Buddhi*, the *Ahaṁkāra*, and the *Manas* proper.

—Sūtra 10, line 4. — Rāmānuja has brought out another contradiction in the Sāṅkhya theory. The Sāṅkhyas in one breath say that the *Pradhāna* is active with a view to secure the release of the *Puruṣa* (Kārikā 58)—

औत्सुक्यनिवृत्त्यर्थं यथा क्रियासु प्रवर्तते लोकः ।

पुरुषविमोक्षनिमित्तं तथा प्रवृत्तिः प्रधानस्य ॥

and in another breath--and the more to establish the utter indifference and actionlessness of the *Puruṣa*—declare (Kārikā 63)—

तस्मान्न बध्यते नापि मुच्यते नापि संसरति कश्चित् ।

संसरति बध्यते मुच्यते च नानाश्रया प्रकृतिः ॥

Further, Rāmānuja says that one who is absolutely beyond the possibility of any modification cannot be able even to be the unconcerned seer and the passive experiencer, as the theorists claim him to be. For, to " see " and to " enjoy " are themselves activities of a sort, and to *seem to see* or to *seem to experience* through non-discrimination is also a species of modification. Compare—

अध्यासभ्रमयोरपि विकारत्वात् ।..... । अध्यासो हि नाम
चेतनस्यान्यास्मिन्नन्यधर्मानुसंधानम् । स च चेतनधर्मो विकारश्च ।

Rāmānuja goes on to add that this same defect is applicable even to the *Māyāvāda* —

येषां कूटस्थनित्यनिर्विशेषस्वप्रकाशचिन्मात्रं ब्रह्म अविद्यासाक्षित्वेनापर-
मार्थिकबन्धमोक्षभागिति वदन्ति, तेषामप्युक्तनीत्या अविद्यासाक्षित्वाध्यासाद्य-
संभवादसामञ्जस्यमेव । इयांस्तु विशेषः । सांख्या जननमरणप्रतिनियमा-
दिव्यवस्थासिद्धयर्थं पुरुषबहुत्वमिच्छन्ति । ते तु तदपि नेच्छन्तीति सुतराम-
सामञ्जस्यम् ।

—Sūtra 10, line 6 ff.— The present discussion as to the nature of the *tapti* and its two correlates the *tapya* and the *tāpaka* is

merely an ethical aspect of the discussion, in the field of cosmology, as to the nature of *pravṛtti* and its two correlates the *pravartya* and the *pravartaka*, which we had in II. ii. 2⁷⁻³⁰. The line of attack and the line of defence are analogous in both the passages. When cornered, Śāṅkarācārya in both places makes his ultimate appeal to the Māyāvāda and also shows that his opponent is in no better boat than himself.

—Sūtra 10, line 26. — The Bhāmati explains the Sāṅkhya view on the point as follows—

दृग्दर्शनशक्तयोः किल संयोगस्तापनिदानम् । तस्य हेतुरविवेकदर्शन-
संस्कारोऽविद्या । सा च विवेकख्यात्या विद्यया विरोधित्वाद्निवर्तते ।
तन्निवृत्तौ च तत्कार्यस्तापो निवर्तते । तदुक्तं पञ्चशिखाचार्येण—तत्संयोग-
हेतुविवर्जनात् स्यादयमात्यन्तिको दुःखप्रतीकारः ॥

—Sūtra 10, line 44. — Bhāmati thus sums up the position—

सांख्यो हि भेदाश्रयं तप्यतापकं ब्रुवाणो न पुरुषस्य तत्सिद्धिर्कर्मतामाख्यातु-
मर्हति, तस्यापरिणामितया तपिक्रियाजनितफलशालित्वानुपपत्तेः । केवलमनेन
सत्त्वं तप्यमभ्युपेयं तापकं च रजः । दर्शितविषयत्वात् तु बुद्धिसत्त्वे तप्ये
तदविभागापत्त्या पुरुषोऽप्यनुतप्यत इव, नतु तप्यते, अपरिणामित्वादि-
त्युक्तम् । तदविभागापत्तिश्चाविद्या । तथाचाविद्याकृतस्तप्यतापकभावस्त्वया-
भ्युपेयः । सोऽयमस्माभिरुच्यमानः किमिति भवतः पुरुष इवाभाति ॥

—Sūtra 10, line 44. — Bhāmati thus brings out the untenability of the Sāṅkhya position—

न तावत् पुरुषस्य तत्तिरित्युक्तम् । केवलमियं बुद्धिसत्त्वस्य तापकरजो-
जनिता । तस्य च बुद्धिसत्त्वस्य तामसविपर्यासादात्मनः पुरुषान्देदमपश्यतः
पुरुषस्तप्यत इत्यभिमानः । नतु पुरुषो विपर्यासतुषेणापि युज्यते । तस्य च
बुद्धिसत्त्वस्य सात्त्विक्या विवेकख्यात्या तामसीयमविवेकख्यातिर्निवर्तनीया ।
नच सति तमसि मूले शक्यात्यन्तमुच्छेत्तुम् । तथा विच्छिन्नमपि च्छिन्नवदरीव
पुनस्तमसोद्भूतेन सत्त्वमभिभूय विवेकख्यातिमपोद्य शतशिखरा अविद्या-
विर्भाव्येतेति बतेयमपवर्गकथा तपस्विनी दत्तजलाञ्जलिः प्रसज्येत ।

—Sūtra 10, line 52 ff. — Compare the following illuminating remarks of Vāchaspatimiśra in the Bhāmati—

यथाहि मुखमवदातमपि मलिनादर्शतलोपाधिकल्पितप्रतिबिम्बभेदं मलिनतामुपैति । नच तद्वस्तुतो मलिनम्, नच बिम्बात् प्रतिबिम्बं वस्तुतो भिद्यते, अथ तस्मिन् प्रतिबिम्बे मलिनादशोपधानान्मलिनता पदं लभते । तथाचात्मनो मलिनं मुखं पश्यन् देवदत्तस्तप्यते । यदातुपाध्यपनयनाद्विम्बमेव कल्पनावशात् प्रतिबिम्बं, तच्चावदातमिति तत्त्वमवगच्छति तदास्य तापः प्रशाम्यति, नच मलिनं मे मुखमिति । एवमविद्योपधानकल्पितावच्छेदो जीवः परमात्मप्रतिबिम्बकल्पः कल्पितैरेव शब्दादिभिः संपर्कात् तप्यते, नतु तत्त्वतः परमात्मनोऽस्ति तापः । यदातु तत्त्वमसीतिवाक्यश्रवणमनन्ध्यानाभ्यासपरिपाकप्रकर्षपर्यन्तजोऽस्य साक्षात्कारउपजायते, तदा जीवः शुद्धबुद्धतत्त्वस्वभावमात्मनोऽनुभवन् निर्मृष्टनिखिलसवासनद्वेष्टाजालः केवलः स्वस्थो भवति, न चास्य पुनः संसारभयमस्ति, तद्वेतोरवास्तवत्वेन समूलकापं कषितत्वात् । सांख्यस्य तु सतस्तमसोऽशक्यसमवच्छेदत्वात् ॥

—Sūtra 10, line 56.— To take a general review of Śāṅkarācārya's refutation of the Sāṃkhya theory, it is evident that the main burden of Śāṅkarācārya's (and the Sūtrakāra's) attack falls upon the impossibility of a non-sentient first principle exhibiting the highly intelligent and complicated and self-motivated and purposive activity that is essentially presupposed in the creation, maintenance and dissolution of the world. The Pradhāna is incapable of putting forth such an activity because, being non-sentient, it has not the power, and the Purusha is incapable of doing it because, being merely the unconcerned seer, he has not the will. And no amount of analogies can help in making possible what is inherently impossible. Śāṅkarācārya's refutation on this point is quite adequate and convincing.— In the second place, Śāṅkarācārya rightly objects to the Sāṃkhya attempt to sunder the world as with a hatchet into two contradictory halves—the Prakṛiti and the Purusha—and then setting out thinking of ways and means to bring these incompatible halves together. This cannot be achieved as long as the halves persist in maintaining intact their own absolute, touch-me-not quality—unless you can have a recourse to the Vedāntic explanation of the utter unreality of the contact. The Sāṃkhyas have come very near doing this, especially when we consider the self-inconsistency to which they are otherwise

driven according to Rāmānuja's showing. And once this is conceded the very necessity of the dual principle of Prakṛiti and Puruṣha disappears. — Other deficiencies pointed out by Śāṅkarāchārya are relatively of little consequence. And we have already commented upon the Sāṅkhya doctrine of many Puruṣhas, which goes against the inherent idealistic trend of the system. — In other parts of the Bhāṣhya Śāṅkarāchārya has tried to demonstrate, and successfully demonstrate, the failure of the Sāṅkhya attempts to quote the Scriptures in support of their theory. That to the Vedāntasūtrakāra the Sāṅkhya was the main opponent in the field is evident everywhere. Compare in this connection the following extract from the Śāṅkarabhāṣhya on I. iv. 28—

प्रधानकारणवादः सूत्रैरेव पुनःपुनराशङ्क्य निराकृतः, तस्यहि पक्षस्यो-
पादूलकानि कानिचिल्लिङ्गाभासानि वेदान्तेष्वापातेन मन्दमतीन् प्रति
भान्तीति । स च कार्यकारणानन्यत्वाभ्युपगमात् प्रत्यासन्नो वेदान्तवाक्यस्य,
देवलप्रभृतिभिश्च कैश्चिद्धर्मसूत्रकारैः स्वग्रन्थेष्वश्रितः । तेन तत्प्रतिषेधे
यत्नोऽतीव कृतः ।

Compare also II. i. 3⁹¹⁻²⁰.

—But while Śāṅkarāchārya's refutation of the Sāṅkhya theory has been generally successful, we must not ignore the fact that the line of arguments adopted by Śāṅkarāchārya against his opponent can be directed with equal force against his own theory inasmuch as the points in the system that have been called into question are ultimate problems in regard to which every system of philosophy has to offer, if at all, only a make-shift defence. Śāṅkarāchārya's Māyāvāda, which had to be appealed to more than once in the course of his refutation of the Sāṅkhyas, is not very much beyond this, as also his appeal, once in a while, to the beginninglessness of the Samsāra and, in the same breath, to what is known as the "Ajātivāda." But it is only fair to point out that Śāṅkarāchārya uses his ultimate weapon only when there remains to him no other escape possible. For the most part he is creditably anxious to confine the warfare within the realm of reason. And for all practical purposes he accepts most of the Sāṅkhya positions, as will be apparent from his refutation of

the Vaisesika theory to which we will shortly direct our attention.

—A short note on the history of the Sāṅkhya System and its bibliography might fittingly conclude our discussion of the theory. The oldest extant text-book of the school is the Sāṅkhya Kārikās by Īśvārkrishṇa, which purports to be a brief summary of the "Shashṭitantra" (see our Note to II. i. 1, line 11). The date of Īśvārkrishṇa is a subject of dispute, but he probably belongs to about A. D. 150. The oldest commentary on the Kārikās is the Vṛitti of Māṭhara* which was translated into Chinese by A. D. 450. There are also the so-called "Sāṅkhya-sūtras" in six Adhyāyas, which are however a modern compilation, possibly incorporating some scraps of an ancient text. The "Sāṅkhya-sūtras" are unknown either to Śāṅkārāchārya or to Sayana-Mādhava, the author of the "Sarvadarśanasamgraha" (14th century A. D.). What is more, the Sūtras are based upon the Kārikās to a large extent, and actually run into the Āryā metre now and then. Whether the Sāṅkhya school had at all any ancient Sūtras like the other schools is a moot point. In a little text called "Tattvasamāsa" about 25 short aphorisms are given; and these "Samāsa-sūtras," it is sometimes claimed, are the original sūtras; but the claim has not been generally allowed. From the very start the Sāṅkhya was opposed to Vedic tradition and it is doubtful whether the school at all cared to imitate the practice of the orthodox Charaṇas by compiling "Sūtras." The oldest definite text of the system that is often mentioned and quoted from, but not now extant save for a short summary of its contents in the Ahirbudhnya Samhitā, chapter xii, stanzas 18-30, is the Shashṭitantra, and that is believed to be a voluminous work in 60,000 ślokas.—The Sāṅkhya-tattvakaumudi of Vāchaspati-miśra as also the Sāṅkhya-pravachanabhāshya of Vijnāna-bhikṣu (the first of them being a commentary on the Kārikās,

* I am not convinced, by the arguments of Keith and others, of the necessity of summoning up an unknown original, supposed to have been utilised by both Māṭhara and Gauḍapāda. That the present text of the Māṭhara contains large and unblushing interpolations, I have myself shown in the *Annals* of the BORI, vol. V, No. 2, pp. 133-168. But the large residuum of agreement between Māṭhara and the Chinese translation of A. D. 450 continues to stare us in the face; and postulating an unknown Ur-commentary is not less questionable a procedure than believing in text-tampering, for which India has been known to be the classical country.

and the second that on the Sūtras are the only other important texts belonging to the school. The school consequently presents very little of historical development after A. D. 150. It is the origins of the system that offer an interesting field for speculation. The Gītā and the Upanishads (especially, Katha Muṇḍaka, and Śvetāśvatara) already use "Sāṁkhya" terms, while Buddhistic tradition makes Ārāda Kālāma, the Buddha's earliest teacher, a Sāṁkhya philosopher. Aśvaghoṣa (first century A. D.) gives in his Buddha-charita details of this teacher's views, which closely resemble the Sāṁkhya, but with the theory of the three "guṇas" omitted. It is believed that the guṇa theory is an illogical after-growth on the system, and attempts are made (cp. Jacobi, " Ursprung des Buddhismus aus dem Sāṁkhya-Yoga ", NGGW, 1896, pp. 43 ff.; also ZDMG, Vol. LII, pp. 1-15) to show the logical relation between the Sāṁkhya theory of world-creation and the Buddhistic theory of "Pratītya-samutpāda." The Arthaśāstra of Kauṭilya (300 B. C.) enumerates the Sāṁkhya and the Yoga as amongst the regular philosophical systems existing in its days. The Mahābhārata in several passages of the Śāntiparvan and elsewhere gives details of the Sāṁkhya system which differ in some respects from those of the orthodox Sāṁkhya—the most important point of difference being the admission of an Īśvara or Lord. A formula that would take account of all these facts and explain the genesis and the early evolution of the system by a series of definite stages is a desideratum not very easily to be fulfilled. The relation of the Sāṁkhya to the Yoga (sometimes designated Seśvara-Sāṁkhya) forms another interesting problem, which we have to pass over by a mere reference. For a discussion of both these problems see History of Indian Philosophy, Vol. 2, The Creative Period, pp. 412-427. — That the Sāṁkhya is one of the most important philosophical systems produced in India, and one the influence of which is felt even in the camps that tried their utmost to attack and annihilate it, is a fact universally conceded. Our Purāṇas are permeated throughout by Sāṁkhya ideas. Compare in this connection the passage from the Padmapurāṇa quoted by us in our Note to II. i. I, line 11. More light on the early history of the school may be expected when more Buddhistic texts, preserved so far only in Chinese and Tibetan translations, are available.

—Sūtra 11, line 2. — It is obvious that the proper place for considering objections against the Vedāntic position urged by the opposing systems would have been the Smṛiti-pāda (II. i). Why was not the present objection urged there by the Sūtrakāra and replied to on the ground of "svapakshadosha"? It comes here as an after-thought. The objection itself is no other than the "vilakṣaṇatva" or disparity in nature between the cause and the effect which, as we saw, the Sāṅkhyas had already urged in II. i. 4-11, where "svapakshadosha" was one of the armours of defence employed by the Sūtrakāra. We are consequently driven to assume either that Śāṅkarāchārya is not correct in his interpretation of the present Sūtra as a Vedāntic defence against the Vaiśeṣhika attack, rather than forming part of the Vedāntic attack against the Vaiśeṣhika theory, which is the topic of the following Adhikaraṇa; or else, that the present Sūtra is a later addition. If, as pointed out by us in the opening Note of this Pāda, independent grounds exist for regarding the whole of the present Pāda (II. ii) as a later addition, it is conceivable that the author of that addition, besides finding out the several weak points in the different Darśanas that came up for discussion one after another in the present Pāda, was also interested to find, in one of the systems attacked, a definite subversion of the "sālakṣaṇya" rule, which as a Vedāntin, he found it convenient to note down, although that might disturb the context a bit. Of course, if the sūtra had come after II. i. 6, nobody need have raised any objection. But apparently the author of the Tarkapāda, on other grounds, preferred to prefix the present sūtra to his own section of the refutation of the Vaiśeṣhika system. — Rāmānuja, Madhva, Nimbārka and Śrikanṭha make sūtra 11 an integral part of the Vaiśeṣhika refutation, Rāmānuja objecting to Śāṅkara's method of interpretation in the following words—

यत् तु परैर्ब्रह्मकारणवाददूषणपरिहारपरमिदं सूत्रं व्याख्यातं तदसंगतं
पुनरुक्तं च । ब्रह्मकारणवादे परोक्तान् दोषान् पूर्वस्मिन् पादे परिहृत्य
परपक्षप्रतिषेधो ह्यस्मिन् पादे क्रियते । चेतनाद्ब्रह्मणो जगदुत्पत्तिसंभवश्च—
न विलक्षणत्वात् (ब्र० सू० २ । १ । ४) इत्यत्रैव प्रपञ्चितः । अतो
ह्रस्वपरिमण्डलाभ्यां महद्दीर्घाणुह्रस्वोत्पत्तिवदन्यच्च तदभ्युपगतं सर्वमसमञ्ज-
समित्येव सूत्रार्थः ॥

Rāmānuja forgets that there are certain weak points in his own interpretation. He gives to the word "vā" the meaning of "cha," and what is more, he has to bring over the word "asamañjasam" from the preceding sūtra, falling under a distinct Adhikaraṇa, on to the present sūtra in order to give to it the character of a negation. Moreover, Bhāskara, who follows Śaṅkara in the interpretation of the sūtra thus, as-it-were answers Rāmānuja—

न विलक्षणत्वादिति तत्रैवोक्तत्वात् पुनरुक्तमिदं प्राप्नोतीत्येवं वर्णयद्भिः
सूत्रकारस्य श्रोत्रियत्वमपोदितम् ।

In other words, if "Na Mantrāṇāṁ jāmīṭāstī,"—Vedic texts do not mind repetition,—be a valid canon of interpretation, and if Rāmānuja himself does not mind such repetitions in other places, why should he make too much of a trifle in this case? The Sūtrakāra is after all a 'śrotriya.' —Vallabha realises the questionable character of Rāmānuja's procedure when he supplies in this sūtra a word belonging to a sūtra falling in an independent Adhikaraṇa. He gets over the difficulty by supposing that although there be no refutatory word in the sūtra, the sūtra intends to ridicule the Vaiśeṣhika theorists by repeating one of their glaringly absurd positions—"Upahāsārtham tasya matasyānuvādaḥ." More ingenious still is Vijnānabhikṣhu who tacks on the present sūtra to the preceding Adhikaraṇa, thereby establishing a legitimate claim to the word "asamañjasam." The Sāṅkhya is incoherent because of contradiction, the preceding sūtra had said. The present sūtra gives two illustrations and says that, in the matter of incoherence, the Sāṅkhyas can console themselves with the reflection that they can share it with the Buddhists who hold that "mahat," that is, the atomic "triad," results from a combination of the smaller (hrasva) binaries ; as also that from the smallest atom (parimaṇḍala) all the larger (dīrgha) combinations take place. Bhikṣhu goes on to say—

अनेन सूत्रेण दृष्टान्तमुद्रया स्वतन्त्राणुवादेऽपि बौद्धानां वैलक्षण्यदोषः
समान इत्युक्तम् ।

And he introduces the next sūtra by the words—

दृष्टान्तविधयोत्थापितं स्वतन्त्राणुकारणवादं तर्कान्तरविरोधेनापि परि-
हरति ।

According to Vijñāna, then, the whole Adhikaraṇa is directed against a section of Buddhists who maintain a variety of the atomic theory. That there was such a class of Buddhists is true, but it is questionable whether they are here intended. — Among the Advaitic commentaries, the Vedāntakalpataru alone goes into the question raised by this Note, and the solution offered is that, introducing in this manner “svapakshavyavasthāpana” in the midst of “parapakshanirākarṇa” merely shows that the latter is not to be regarded as an end in itself for a text designed to convey instruction and secure salvation. — It seems to us that Śaṅkarācārya's interpretation, being the earliest now extant, is likely to have hit the real purpose of the sūtra, but that its presence in the present Pāda has to be explained on other independent grounds.

—Sūtra 11, line 4. — The Vaiśeṣhikas always think of causation in terms of ghaṭa and paṭa, and hence the causal operation comes to be regarded as no more than a mere mechanical combination and arrangement of parts. This is a crude conception of causation which requires that no new qualities can be produced in the effect. But chemical combinations—or to take an illustration which could not have been unknown even to the founder of the theory of Atomism—the different ingredients of the “Tāmbūla”—produce in their combination the new quality of redness absent in the ingredients severally. And if the Vaiśeṣhika were to argue that the redness* was before *dormant* in some of the ingredients, that would be a defence more properly available to the Vedāntins.

—Sūtra 11, line 9. — During the period of Pralaya the Universe consists of the following all-pervading and eternal substances—Ākāśa, Time, Space, infinite number of Individual Souls, the atomic minds of these Souls, and God who is the Supreme Soul—together with certain qualities inherent in each of them (which also must be eternal). Also there are the infinite number of atoms belonging to the substances Earth, Water, Light, and Air, possessing certain peculiar (and eternal) qualities, besides certain distinctive marks (technically known as the Viśeṣas) which dis-

* This redness can possibly be explained as pākaja or due to heat, as in a baked jar. But this explanation will not suffice to explain the origin of the madaśakti or intoxicating power from “kiṇva” or fermenting articles.

tinguish one atom of the same element from another. We must also assume, during this state of Dissolution, the existence of the category of Sāmānya or Generality, as well as Samavāya or Inherence which connects qualities with substances, Viśeṣhas with atoms, and the species with the genus or generality that comprises them. And if Negation or Abhāva is to be regarded as a separate category, there will have to be found in the state of Pralaya room for certain abhāvas such the Prāgabhāva of the world that is to be created, the Pradhvānabhāva of the world that has come to an end, the Anyonyābhāva which enables the formulation of a proposition like 'this atom is not that atom' as also the Atyantābhāva of certain absolutely impossible things like the hare-horn.—This Pralaya condition endures for a period which is sufficient for the ripening of the karman belonging to the Individual Souls that are to be re-created; and during this state the atoms of the four substances remain intact and immobile, each apart from the other and possessing certain qualities common to all atoms as such, viz., a minute dimension (technically called the Pārimāṇḍalya or Infinitesimal Sphericity), certain specific qualities which they share with others of their own class, e. g. some of the earth-atoms will have anudbhūta-gandha or undeveloped odour, the light-atoms, anudbhūta-rūpa, and so on, besides their own distinctive Viśeṣhas which enable God to assign certain atoms to certain Souls (for the composition of their body) and certain others to certain other Souls, according to the merit or demerit of each. When at the proper time God desires to re-create the Universe, he creates motion in the atoms, which then clash against each other, thereby causing specific combinations. In this last respect this theory differs from the Atomic theory of Leucippus and Democritus, which starts with an infinite number of atoms of divergent shapes falling down perpendicularly through infinite space, God, Creator, or some such unexplained cause effecting only a slight initial variation in the rectilinear direction of the fall, which results in all sorts and degrees of impacts and combinations in strict accordance with the laws of Dynamics. The classical description of the creation and dissolution of the world according to the Vaiśeṣhika theory is to be found in the Prasastapādabhāṣya (Vizianagram ed. pp. 48-49)—

It may be added in this connection that the Vaiseshika sūtras proper do not contain any direct passage bearing on the creation and destruction of the world.

—Sūtra 11, line 11. — The table of ratios is—

2 atoms = 1 Dvyaṇuka or binary :

2* Dvyaṇukas = 1 Chaturāṇuka or quaternary atom ;

3 Dvyaṇukas = 1 Tryaṇuka, 'Trasareṇu, 'Truṭi, or tertiary atom.

The Trasareṇu is the smallest particle of matter that is visible, *e. g.*, the smallest mote that we can see dancing in the sunbeam. After the Trasareṇu, the compounds exhibit no fixity of ratio, being more or less arbitrary. The atoms have “*anudbhūta-ś viśeṣa-guṇas*” *plus* *pārimāṇḍalya* dimension. The binaries

* The newer view makes the quaternary to consist of four binaries.

§ This view is challenged by some writers.

also agree in having "anudbhūta*-viśeṣa-guṇas" but they have not the pārimāṇḍalya dimension, any longer but a different dimension, namely, *viz.* anutva (minuteness) in one direction and hrasvatva (smallness) in another. We cannot assert that the dimension of one binary, must equal the dimensions of two atoms because as the dimension of an atom is always absolutely incommensurable, $2 \times 0 = 0$. Two binaries produce the quaternary which, presumably, yet retains the anudbhūta-viśeṣa-guṇas, but has mahattva (greatness) and dīrghatva (length) in place of the anutva and hrasvatva of the binary. The addition of one more binary to the quaternary, it would seem, changes anudbhūta-viśeṣa-guṇas to udbhūta-viśeṣa-guṇas so that the trasareṇu becomes visible to the senses. In other words, the atom has *one* parimāṇa and is incommensurable. The binary (where the two atoms form a line) is a compound of *two* parimāṇas one of them being incommensurable (anu), the other being very small (hrasva). If two binaries are placed in such a way that the atoms form the four corners of a square plane (: :) we have a compound of *two* parimāṇas only, but both the parimāṇas are commensurable (call one of them mahat and the other dīrgha). The addition of one more binary can make it a trasareṇu (so probably we should understand Śaṅkarāchārya), which is the *minimum sensible*. It will thus be seen that each of the three combinations leading to the production of the tryaṇuka was marked by the effect dropping off some one characteristic of the cause and taking on a new one entirely unknown to the cause. Compounds subsequent to the tertiary exhibit a difference only in degree, but not in kind.

—Sūtra 11, line 16. — Commentators of Śaṅkarāchārya are unanimous in declaring that the text of the Bhāṣhya should have been "dve dve" instead of "dve." According to the more modern view a chaturāṇuka is made up of four (twice two, dve dve) dvyaṇukas. And since it is impossible to suppose that Śaṅkarāchārya could have made a mistake, attempts are made to make 'two' equal to 'four'. Thus Ānandagiri proposes to regard the word dvyaṇuke in the phrase to mean two 'āṇukas,' an 'āṇuka' being what is generally called a binary. Thus dve dvyaṇuke means 'two pairs-of-āṇukas or binaries', *i. e.*, four binaries.

* This view is challenged by some writers.

Vāchaspatimīśra has a more round-about method. A paramāṇu has 'ekatva' for its saṁkhyā; a dvyaṇuka has 'dvittva', and there are two such dvittvas belonging to the constituent atoms, each of which is 'number two' with reference to the other. The phrase 'dve dvyaṇuke' is to be understood as equal to 'dvyaṇuke' (locative) [vartamāne] dve (= dvittve) i. e., the 'two-nesses' inhering in the binary-atoms. This way of interpretation gets over the main difficulty in the same way in which in the sentence—

नेत्राभ्यां पश्यन्ति चत्वारः पुरुषाः ।

the use of the dual is justified, notwithstanding the fact that the total number of eyes is eight. Both these methods are attempts to follow the maxim—

स्थितस्य गतिश्चिन्तनीया ।

Some editors have gone so far as to actually emend the text. But as the oldest commentators know the so-called faulty reading, that is a questionable procedure. The Ratnaprabhā is nearer the mark when it says that Śāṅkarācārya is here following the older Vaiśeṣhika view as propounded in the Rāvaṇabhāṣhya on the Vaiśeṣhikasūtras, which is no longer extant—

प्रकटार्थकारास्तु यदद्वाभ्यां द्व्यणुकाम्यामारब्धं कार्यं महत्त्वं दृश्यते तस्य हेतुः प्रचयो नाम प्रशिथिलावयवसंयोग इति रावणप्रणीति भाष्ये दृश्यत इति चिरंतनवैशेषिकदृष्टयेदं भाष्यमित्याहुः ॥

—Sūtra 11, line 20.—As Śāṅkarācārya admits the possibility of even three atoms producing a combination (this is not permitted in the modern theory) it is clear that he is following an exposition of the Vaiśeṣhika view (the commentators designate it as the "avyavasthita" or irregular Vaiśeṣhika theory) that has not come down to us. Compare also II. ii. 15, lines 23 and following. The following chart would exhibit the possible variations in dimensions due to different combination—

One atom—Sphericity in all directions.

Two atom—'Hrasvatva' in the direction of combination and 'Āṇutva' in the other direction.

Three atoms—(i) If in one line, 'Mahattva' in the direction of combination and 'Āṇutva' in the other direction; (ii) if in two directions (e. g., :'), there would result 'Hrasvatva' in both directions.

Four atoms—In a combination of the square form (:) the result would be, 'Mahattva' and 'Dīrghatva';
 (ii) in a combination of the form (....) the result would be Aṇutva and Mahattva.

Modern atomic theory explains increase in dimension by postulating vacant inter-spaces between atoms and atoms and the Buddhist school of the Sautrāntikas and Vaibhāshikas seem to have done the same.

—Sūtra 11, line 23.— It is somewhat awkward that Śāṅkarāchārya should have started (line 17) with a "Chaturāṇuka" which is mahat and dīrgha and concluded (line 23) with a "Tryaṇuka" which is mahat and dīrgha. The text is not however wrong, and so we need not entertain the suspicion of a conscious or unconscious tampering with it.

—Sūtra 11, line 25 ff.— According to the Vaiśeṣhika theory of causation known as the "Asatkāryavāda," the Prāgabhāva of the effect terminates the very same moment that the effect comes into being. In less technical language this means that the cloth is a *new* something brought into existence by causal apparatus working upon the threads, which latter remain thereafter in the intimate relation of inherence with the cloth. And the same is true also of the qualities such as whiteness inhering in the threads, which produce *new* but analogous qualities inhering in the effect, the cloth. Now at any given place and in any given moment of time only that thing can originate of which the "kāraṇasāmagrī" is complete in every respect. And inasmuch as the cloth and its qualities are two distinct padārthas, when through the completion of the kāraṇasāmagrī there is going to be the origination of the cloth, there cannot be *in that same moment* the origination of the qualities, which depend upon a distinctive set of kāraṇas. Hence the Vaiśeṣhika assumption referred to in line 34, below, to the effect—

उत्पन्नं द्रव्यं क्षणमगुणवत् तिष्ठति ।

Hence also the Pūrvaapakṣa supposition (line 25) that the effect, in the very moment of its existence and prior therefore to the development of its qualities, may come to be placed in a condition tending to inhibit the origination of the *expected* new qualities (Pārimāṇḍalya) and encourage instead the origination

of certain *other* new qualities (anutva-hrasvatve) not warranted by the normal kāraṇasāmagrī. Against such a supposition it is rightly urged that the Pārimāṇḍalya was in full possession of the field not only prior to the origination of the dvyanuka but also at the moment of its origination. It was moreover at no greater distance than the kāraṇasāmagrī of the rival qualities like anutva or hrasvatva that were to supplant it. It ought not therefore to have allowed an intruder to oust the owner; and it is absurd to credit the Pārimāṇḍalya with an anxiety, at the cost of utter self-effacement, to facilitate the origination of such utterly dissimilar qualities as those that the dvyanuka is supposed to possess. Things can produce, or assist in the production of, other things which are like to them. The Pūrvapaksha supposition furthermore contradicts the statement of its own Śāstra.

—Sūtra 11, line 28f. — Śaṅkarācārya passes over in silence the Pūrvapaksha-statement that Achetanā is a mere negation of Chetanā, and none of the commentators feels himself called upon to challenge the same. Chetanā and Achetanā is the same as Vidyā and Avidyā, and the second member of these pairs of opposites is *not*, in the orthodox Vedānta view, a mere negation of the first. The Vedāntasāra, for instance, says—

अज्ञानं तु सदसद्भयामनिर्वचनीयं त्रिगुणात्मकं ज्ञानविरोधि भावरूपं
यत्किञ्चिदिति वदन्ति ।

To the same effect also is the Vyāsabhāṣya on Yogasūtra ii. 5—

तस्याश्चाभिन्नागोष्पदवद्वस्तुसत्त्वं विज्ञेयम् । यथा नामित्रो मित्रभावो,
न मित्रमात्रं, किंतु तद्विरुद्धः सपत्नः, यथा चागोष्पदं न गोष्पदाभावो, न
गोष्पदमात्रं, किंतु देश एव ताभ्यामन्यद्वस्त्वन्तरम्, एवमविद्या न प्रमाणं,
न प्रमाणाभावः, किंतु विद्याविपरीतं ज्ञानान्तरमविद्येति ॥

The siddhāntin merely observes, in the words of the Ratnaprabhā,—

कारणगता गुणा न कार्ये गुणान्तरमारभन्त इत्येतावतैवेष्टसिद्धौ न तद्धे-
त्वनुसरणे खेदनीयं मन इति ॥

—Sūtra 11, line 38. — The Vaiśeṣikasūtra vii. 1. 9 (which in the Sūtrapāṭha merely reads “Kāraṇabāhutvāchcha”) explains how *mahat* dimension is produced. It can be produced in three

different ways. The mahattva or the bigness of a jar is due to the mahattva of its constituent clay (kāraṇamahattvāt). The mahattva of an expanded cotton ball (as compared with the same ball when compressed) is due to the looseness of the cotton-fibres (prachayaḥ = pīṇdayaḥ praśīthilaḥ saṁyogaḥ). But the mahattva of the tryaṇuka is due not to the dimension of its causes the dvyaṇukas (which possess aṇutva and hrasvatva only), or to that of its ultimate causes the paramāṇus (which have sphericity only), but to a third cause; namely, the quality of number (in the present case the bahutva or 'many-ness') belonging to the three dvyaṇukas that have originated it. The question naturally arises, how could one guṇa (viz, sāṁkhyā) produce another guṇa (dimension)? And whence did the dvyaṇukas come to have their bahutva-sāṁkhyā or many-ness, seeing that the causes of the dvyaṇukas themselves possessed not bahutva but ekatva only [each atom being a self-sufficient unit]? The latter question is easily answered. All numbers from two onwards are, according to the Vaiśeṣhikas, 'apekshābuddhijanya' or the result of an expectancy produced in the mind of someone (in the present instance the Creator) who is going to count them. Thus the dvyaṇuka can have bahutva even though it is absent in its causes the paramāṇus. And as to how one quality can produce another and a distinct quality, the Vaiśeṣhikas have no answer to give. The rule of like producing like (which is a Sāṁkhya postulate) is not as such recognised by the Vaiśeṣhikas and, as we notice, it is violated here even in the production of bahutva from the apekshābuddhi, which is a distinct guṇa.

—Sūtra 11, line 39. — Ānandagiri explains the sūtra thus—

यत् कारणबहुत्वादिभ्यो महत्त्वं त्र्यणुकादौ जातं ततो विपरीतं द्व्यणुक-
गतमणुत्वमीश्वरापेक्षाबुद्धिजन्यपरमाणुनिष्ठद्वित्वासमवायिकारणानुत्पद्यते ॥

—Sūtra 11, line 45f. — While the threads are the inherent or samavāyi-kāraṇa of the cloth, the joining together (saṁyoga) of the threads is its asamavāyi-kāraṇa. Now the asamavāyi-kāraṇa is the most important cause as leading directly to the production of the effect. But here the law of like producing like (which is normally appealed to where one substance produces another substance) is vitiated, inasmuch as saṁyoga, a guṇa, is held to produce paṭa, a dravya.

—Sūtra 11, line 49ff. — How many elements go to the making of the human body is a point that has evoked considerable difference of opinion. The usual phrase “pañchatvaṃ gataḥ ” suggests the idea that the body is made up of *five* elements ; to this effect is the view attributed to Pañchaśikha (Mahābhārata, xii. 222. 7f.)—

धावतः पञ्च तेषां तु खं वायुर्ज्योतिरम्बु भूः ।
ते स्वभावेन तिष्ठन्ति वियुज्यन्ते स्वभावतः ॥
आकाशो वायुरुष्मा च स्नेहो यश्चापि पार्थिवः ।
एष पञ्चसमाहारः शरीरमपि नैकधा ॥

This is also the ordinary Vedānta view. Compare Vedāntasāra, section 16—

एतेभ्यः पञ्चीकृतेभ्यो भूतेभ्यः... ..चतुर्विधस्थूलशरीराणां तुदुचि-
तानामन्नपानादीनां चोत्पत्तिर्भवति ।

The ultimate Vedāntic source for the view is perhaps the oft-quoted Bṛihadāraṇyaka passage (ii. 2. 13)—

यत्रास्य पुरुषस्य मृतस्याग्निं वागप्येति, वातं प्राणः, चक्षुरादित्यं,
मनश्चन्द्रं, दिशः श्रोत्रं, पृथिवीं शरीरम्, आकाशमात्मा, ओषधालोमानि,
वनस्पतीन् केशाः, अम्बु लोहितं च रेतश्च निधीयते, कायं तदा पुरुषो
भवति ॥

But the view has not remained unchallenged. The subtle and transmigratory body is of course admitted to be made up of the five subtle bhūtas or “Tanmātras.” With reference to the gross body some (Mīmāṃsists of the Prābhākara school) object to the inclusion of the Ākāśa amongst the constituents of the body, because ether is eternal and all-pervading, and no portion of it can go to make up a destructible object like the body. Others object to both Ākāśa and Vāyu because they are invisible, and a saṃyoga of the other visible bhūtas with the invisible is bound to be invisible. On the strength of the “ Trivṛitkarana ” passage in Chhāndogya vi. 2ff. the body is by some regarded as made up of just three elements: earth, water, light; while some others omit “ light ” from the list. The ultimate Nyāya-Vaiśeṣika view is to regard the body as composed of only *one* element, *viz.* earth in this world, water in Varuṇa-loka light in Āditya-loka, and air in Vāyu-loka, the reason being that a given body exhibits only

one distinguishing quality, e. g., odour in the case of terrestrial bodies. The other elements may come into *external* contact and may help to sustain erect the *pārthiva* body, but such an external contact is different from the *samyoga* implied in the constitution of a well-knit or *organic aggregate*. Compare the *Sāṅkhya-pravachana-bhāṣhya* on iii. 19—

एकभौतिकमित्यपरे । पार्थिवमेव शरीरमन्यानि च भूतान्युपष्टम्भक-
मात्राणीति भावः । इतरच्च भूतचतुष्टयमवष्टम्भकमित्याशयेन
पाञ्चभौतिकव्यवहारः ॥

Compare also Vātsyāyana's *Nyāyabhāṣhya* on iii. 1. 28—

तत्र मानुषं शरीरं पार्थिवम् । कस्मात् । गुणान्तरोपलब्धेः । गन्धवती
पृथिवी गन्धवच्च शरीरम् । अवादीनामगन्धत्वात् तत्प्रकृत्यगन्धं स्यात्
... 'पार्थिवाप्यतैजसमतद्गुणोपलब्धेः'—'निश्वासोच्छ्वासोपलब्धेश्चातुर्भौति-
कम्'—'गन्धक्लेदपाकव्यूहावकाशदानेभ्यः पाञ्चभौतिकम्'—त इमे
संदिग्धा हेतव इत्युपेक्षितवान् सूत्रकारः ।

—Sūtra 12, line 5.—The Vaiśeṣhikas argue that the process of division and subdivision must stop somewhere. Otherwise the mountain Meru and the mustard seed would be of equal dimension, both containing (not a given number of indivisible atoms but) an infinite number of infinitely-divisible atoms. The validity of the argument is discussed under sūtra II. ii. 15 below.

—Sūtra 12, line 8ff.—Compare the extract from the *Prāśasta-pādabhāṣhya* given by us under our Note to II. ii. II. line 9.

—Sūtra 12, line 17.—Śāṅkarācārya suggests a number of ways of interpreting the words of the Sūtra—

उभयथापि = (i) विभागावस्थानामणूनां संयोगार्थस्य कर्मणो निमित्ता-
भ्युपगमेऽनभ्युपगमे वा ।

= (ii) तत्कर्मनिमित्तस्य प्रयत्नाभिघातादिदृष्टस्वरूपत्वेऽदृष्ट-
स्वरूपत्वे वा ।

= (iii) तददृष्टस्वरूपस्य कर्मनिमित्तस्य आत्मसमवायित्वेऽ-
नुसमवायित्वे वा ।

= (iv) परमाणोः परमाण्वन्तरेण कात्स्न्येन संयोगार्थमेकदेशेन संयोगार्थं वा ।

= (v) परमाणूनां सृष्टौ संयोगोत्पत्त्यर्थं प्रलये विभागोत्पत्त्यर्थं वा ।

= (vi) ईश्वरेच्छाया नित्यत्वेऽनित्यत्वे वा । -- this is Madhva's interpretation.

न कर्म = परमाणुष्वाद्यं कर्म न संभवति ।

अतस्तदभावः = अतः सृष्ट्याद्यभावः । अथवा द्वयणुकादिक्रमेण सर्गादेरभावः ॥

—Sūtra 12, line 20. — The line is differently read—

(i) प्रयत्नोऽभिघातादिर्वा यथादृष्टं.....अभ्युपगम्येत । This states only one alternative, the second being given only in line 25 below.

(ii) The reading adopted by us, where *three* alternatives are distinctly given, the effort or blow being the 'dṛiṣṭa' cause.

By the word 'ādi' *nodana* or propelling is to be included. The distinction between *abhighāta* and *nodana* is thus formulated—

स्थिरस्य वेगवद्द्रव्यसंयोगविशेषोऽभिघातः, स एव चलस्य नोदनमिति भेदः ।

—Sūtra 12, line 23. —In accordance with to the Nyāya-Vaiśeṣika theory the Ātman (which term comprises both the individual and the Supreme soul) has the following qualities—

बुद्ध्यादिषट्कं* संख्यादिपञ्चकं† भावना तथा ।

धर्माधर्मौ गुणा एत आत्मनः स्युश्चतुर्दश ॥

संख्यादयः पञ्च बुद्धिरिच्छा यत्नोऽपि चेश्वरे ।

In the case of the individual souls at any rate all these qualities (with the exception of the five beginning with 'number') are adventitious, the Ātman in his real nature being without not

* बुद्धि, सुख, दुःख, इच्छा, द्वेष, प्रयत्न.

† संख्या, परिमाण, पृथक्त्व, संयोग, विभाग.

only pleasure and pain, desire and aversion, effort and impression, but also without intellection, merit and demerit ; and it is such a quality-less state which it is the function of the Moksha to achieve. Rightly enough, such a non-sentient stone-like condition of the liberated soul is made a butt of ridicule by all the opponents of the theory.

—Sūtra 12, line 27. — Adṛiṣṭa or 'merit and demerit' has the property of developing its fruit at a specific period only. If the beginning of the process of creation is to be dependent upon adṛiṣṭa, it is unlikely that the adṛiṣṭas of all the Ātmans would ripen simultaneously at the commencement of the creation. As Rāmānuja points out—

नन्हृष्टं विपाकापेक्षं फलायालम् । कानिचिददृष्टानि तदानीमेव विप-
च्यन्ते, कानिचिज्जन्मान्तरे, कानिचित् कल्पान्तरे । अतो विपाकापेक्षत्वाच्च
सर्वदोत्पादकत्वप्रसङ्ग इति नैतत् । अनन्तैरात्मभिरसंकेतपूर्वकायुगपदनुष्ठिता-
नेकविधिकर्मजनितानामदृष्टानामेकस्मिन् काल एकरूपविपाकस्याप्रामा-
णिकत्वात् । अत एव युगपत् सर्गसंहारो द्विपरार्धकालमविपाकेनावस्थानं
च न संगच्छते ॥

—Sūtra 12, line 31. — It is evident that although the Creator or God is an Ātman whose knowledge, power, and will is eternal, he is not presupposed in the argument at issue. Otherwise Śaṅkarācārya would not have said that there was no other possible Controller or Regulator of the creation. In fact it is well-known that the Nyāya* and particularly the Vaiśeṣhika sūtras contain no mention of a God. It is the Bhāṣhyas of Vātsyāyana and of Praśastapāda that introduce the idea for the first time, Śrīdhara and Udayana later developing and systematising the same. The negative attitude of these systems with reference to God is explicable probably by the close affinity of Nyāya with the Pūrvamīmāṃsā and to a somewhat less degree that of the Vaiśeṣhika with the Sāṃkhya. The oft-quoted anecdote about Kaṇāda who refused even on his death-bed to call upon the name of God, but only proclaimed "Pīlavah-pīlavah-pīlavah" falls in a line with the same view. But the atomism of the Vaiśeṣhika school was

* In Nyāyasūtra IV, i. 19, Īśvara or the Lord is mentioned, but as a Pūrvapakṣa assumption only.

not capable of standing on its own legs. Somebody was wanted to start the first motion in the atoms, and early critics of the system must have brought this defect glaringly to the fore. The Vaiśeṣhika-sūtras make frequent references to the infallible character of the Veda, which might have been regarded by them also as self-subsistent. In any case, both the Nyāya and the Vaiśeṣhika sūtras are so very much lacking in systematic arrangement of the contents, that scope is left as much to put down particular sūtras as interpolations as to believe that specific topics and specific sūtras, although once present in the sūtra-pāṭha, have been dropped or missing.

—Sūtra 12, line 34ff. — If what is infinitely small can be called zero, one infinitely small substance added to another infinitely small substance cannot lead to any increase in the dimension inasmuch as $zero + zero = zero$. The Brahmaṇḍa-sūtra on II. i. 29, lines 12-15, where this same argument is introduced observes—

द्वयोः परमाण्वोः संयोगः किं व्याप्यवृत्तिरव्याप्यवृत्तिर्वा ।...। व्याप्य-
वृत्तिता हि संयोगस्य तदा स्यात्, यावति देशे एकः परमाणुः संमि-
तस्तावत्येव देशे यद्यपरोपि संमितो भवेत् । तथाच न प्रथिमा संभवति ।
सति प्रथिम्नि परमाणुदेशापेक्षया व्यणुकस्याधिकदेशव्याप्तोरावश्यकत्वात् ।
अथाव्याप्यवृत्तिरण्वोः संयोगः, तथा सति द्वयोर्मृत्पिण्डयोरेकैकपार्श्वसंयो-
गेन महतो मृत्पिण्डस्येवाण्वोरप्येकैकपार्श्वयोगेन व्यणुकारम्भे प्रथिमा
संभवति परं त्वव्याप्यवृत्तित्वे संयोगस्य तत्रैवाभावो वक्तव्यः । तयोश्च
संयोगतदभावयोर्विरोधपरिहाराय वृक्षादिषु शाखादिमूलादिरूपावयवा इव
नेहावयवभेदा अवच्छेदकाः संभवन्ति, परमाणोर्निरवयवत्वात् ॥

Modern Physics has maintained the impenetrability of matter because according to it two atoms never occupy the same space and so cannot coalesce together by interpenetration ; there exists always a space between atom and atom. Such is not the Vaiśeṣhika view. Compare, however, our Note to II, ii. 11. line 11; and see also sūtra II. ii. 17, lines 70 ff.

—Sūtra 12, line 39. — Of a piece of cloth—

समवायिकारणम् = Threads;

असमवायिकारणम् = Their conjunction ;

निमित्तकारणानि = तुरी (shuttle), वेम (loom), etc.

सामान्यकारणानि = ईश्वरतदिच्छाज्ञानकृतयः, आकाश, काल, दिक्,
कार्यप्रागभाव, प्रतिबन्धकभाव, etc.—

The Sāmānyakāraṇas are the conditions indispensable for the production of each and every effect; while an Asamavāyi-kāraṇa is thus defined—

कार्येण कारणेन वा सहैकस्मिन्नर्थे समवेतत्वे सति यत् कारणं तद-
समवायिकारणम् ।

Thus tantusamyoga (being a quality) has a samavāya relation with the tantus or threads and resides, in the same samavāya relation, just where the paṭa (the kārya) resides, and it is a necessary factor producing the cloth. Hence tantusamyoga is the asamavāyi-kāraṇa of the paṭa. So also, tanturūpa (being a quality) has samavāya relation with the tantus and resides just where the tantus (the kāraṇa) reside, and it is a necessary determinant of the colour of the cloth. Hence tanturūpa is the asamavāyikāraṇa of paṭarūpa. Asamavāyi-kāraṇa comes nearest to what might be styled the operative cause.

—Sūtra 13, line 8. — The problem was already discussed from a slightly different point of view in II. i. 18, lines 13 to 34. See our Notes to that passage. See also II. ii. 17, lines 18 to 53, below.

—Sūtra 13, line 8 ff. — The Nyāya-Vaiśeṣika maxim as to the perception of the categories of Sāmānya, Abhāva, and Samavāya is thus expressed —

येनेन्द्रियेण या व्यक्तिर्गृह्यते तेनैवेन्द्रियेण तन्निष्ठा जातिस्तदभावश्च गृह्यते ।

The Naiyāyikas extend the scope of this maxim to the Samavāya also; but the Vaiśeṣikas regard it as inferable only. At the same time it must be remembered that this is the more modern doctrine, which makes its first appearance in Praśastapāda, who declares it to be 'atindriya' and 'Iha-buddhy-anumeya.' The last characterisation has reference to the Vaiśeṣika-sūtra vii. 2. 26—

इहेदमिति यतः कार्यकारणयोः स समवायः ।

which is thus explained—

यथेह कुण्डे दधीतिप्रत्ययः संबन्धे सति दृष्टस्तथेह तन्तुषु पटः, इह वीरणेषु
(वीरण = a kind of grass) कटः, इह द्रव्ये गुणकर्मणी, इह द्रव्य-
गुणकर्मसु सत्ता, इह द्रव्ये द्रव्यत्वम्, इह गुणे गुणत्वम्, इह कर्मणि
कर्मत्वम्, इह नित्यद्रव्येऽन्त्या विशेषा, इति प्रत्ययदर्शनादस्त्येषां संबन्ध
इति ज्ञायते ॥

This should imply that where the two correlates of the Samavāya are themselves perceptible, the Samavāya itself should be perceptible. That at any rate might have been the original formulation of the theory, in accordance with which Śāṅkarācārya declares the Samavāya to be 'iha-pratyaya-grāhyaḥ.' When it was perceived that the correlates (*i. e.*, the 'ayutasiddha' padārthas) might themselves be imperceptible to sense, the Samavāya came to be regarded as partly perceptible and partly imperceptible; or, for the sake of uniformity, everywhere imperceptible and so inferable.

—Sūtra 14, line 2.—The argument is analogous to the one urged against the Sāṅkhya, who could not explain the Pravṛtti of non-sentient matter in the absence of a sentient regulator. —The student will note here an attempt to introduce what may be called the "proof by exhaustion." All possible alternative suppositions are summoned up and disproved seriatim. Four koṭis or possibilities are put up. The mode of argumentation is often described as the "Prasaṅga" dialectics, and the Bauddhas (if not some of the pre-Buddhistic "heretics" referred to in Buddhist texts like the Brahmajāla or the Sāmaññaphala suttas seem to have developed it with crushing effect in facing their opponents' theories.

—Sūtra 15, line 3.—Atoms, according to the Vaiśeṣikas, do not only possess the mathematical qualities of size, position, movement etc.—herein the theory agrees with that of Democritus—but also colour and other viśeṣa-guṇas. Since these last are physical qualities, whether an atom contains only one of them, or two and more, should make a difference in its character as an atom, just as, in modern Chemistry, the fact that an atom of Hydrogen and another of Mercury should weigh differently can be held to prove that the atoms are not real atoms. If the atom, in other words, is to be regarded as the smallest possible division of any

substance, it ought to be absolutely equal in weight with the smallest possible division of any other substance, and the two atoms should have, if not the same properties, at least an exactly equal number of them. This seems to be Śaṅkarāchārya's line of argument, and it is clearly based upon a confusion between what is *smallest* and what is *simplest*. See in this connection the Bhāṣhya on II. ii. 16, lines 6 to 14.

—Sūtra 15, line 7. — 'That the rūpa and other qualities in some of the paramāṇus are latent or anudbhūta, and not manifest or udbhūta, as in the piece of cloth, is a qualification that need not vitiate the force of the above argument. Moreover, the Vaiśeṣhikas admit the possibility of some of the atoms (*e. g.*, those of earth) changing their qualities through application of heat. A raw and black earthenware, when thrown into the kiln, gets red by being baked. The redness is communicated not only to the outer surface but has gone deep right upto the atoms. There is in other words the 'pilupāka' or baking of atoms, and not the 'pīthara-pāka' or baking of mere potsherds (as held by the Nāiyāyikas). That an atom should thus be capable of giving up one quality and taking up another implies in its case an extended dimension and not a mere infinitesimality.

—Sūtra 15, line 15. — The Sūtra is read differently in the regular Sūtrapāṭha, viz.—

अनित्य इति विशेषतः प्रतिषेधभावः ।

And its interpretation is also not very satisfactorily given. The interpretations in the field are —

(i) अनित्य इति नित्यस्य (= विशेषतः) प्रतिषेधः विद्यते ।

or (ii) अनित्य इति प्रतिषेधस्य वस्तुविशेषमाश्रित्यैव भवनम् ।

Śaṅkarāchārya reads the sūtra as we have it, and offers the interpretation—

[नित्यमात्रस्याभावे] अनित्यमिति विशिष्य प्रतिषेधः नैव विद्येत ।

In other words—

नित्यत्वनिषेधस्तत्प्रतियोगिवस्तुपूर्वको निषेधत्वादुदवदित्यनुमानेन परमाणु-
नित्यत्वसिद्धिः ।

The third Vaiśeṣhika sūtra which is quoted by Śāṅkarāchārya has been the despair of commentators. One commentator combines Sūtras 4 and 5 into one, and declares that the negative-statement in the form that everything whatsoever is impermanent is a mistake (= avidyā). Another asserts that all arguments adduced to prove the non-eternality of atoms are an avidyā, are fallacious. Śāṅkarāchārya contemplates two possible interpretations — whether actually offered by Vaiśeṣhika writers known to him we have no means of judging. In the Vaiśeṣhika sūtrapāṭha the sūtra is given as “Avidyā” without the following “cha;” while there is another Vaiśeṣhikasūtra (vii. i. 21) —

अविद्या च विद्यालिङ्गम् ।

which however does not seem to have any clear bearing upon the point at issue.

—Sūtra 15, line 23ff. — Śāṅkarāchārya's first interpretation of the sūtra can itself be understood in two ways, according as the words “satām kāraṇānām” are rendered as “of existent causes,” (taking *satām* as adjective), or as “of the causes of what are existent-entities” (namely, of the atoms: taking *satām* as a noun). In the former rendering the specific cause for permanence of atoms put forth can only be their non-perceptibility; while with the latter rendering (which is accepted in the Translation), the cause of the permanence of atoms is the circumstance that of the atoms themselves no cause exists, or is cognisable by the senses. The way in which the statement is worded, especially the epithet “paridrīṣyamānakāryāṇām”, makes it however open to objection, seeing that even the Dvyaṇukas or binary-atoms fall within the scope of the statement. For, the dvyaṇukas are existing entities (and not non-existences like the Prāgabdhāva, which is sought to be excluded by the qualification “satām”) and we see tryaṇukas and other effects of these dvyaṇukas, but not the causes of the dvyaṇukas, namely, the paramāṇus which are imperceptible to the sense. So, for parity of reasons, the dvyaṇukas will have to be proclaimed eternal. There is also this further objection that the atoms are not always “paridrīṣyamānakārya” inasmuch as the binaries, the immediate effects of atoms, are not visible to sense. This last objection is quite fatal. And as to the *ativyāpti* on the binaries, if to exclude them

we introduce the qualification— 'provided there be no *dravya as its cause*' (*adravyatve* being understood as *adravyakāraṇatve*), "it will meet the case, seeing that binaries do have *dravyas* (atoms) as cause, but it is practically saying what was already said in sūtra IV. i. 1, above.

—Sūtra 15, line 27.—A *dvyāṇuka* is destroyed by the severance of the conjunction of the atoms : *tryāṇuka* and subsequent products are destroyed by the outright destruction of the constituents, such as *dvyāṇukas*. These are the only two ways in which, according to the older school of *Vaiśeṣikas*, *substances* perish. The newer school uniformly recognises the first, i. e., the *asamavāyikāraṇā-nāśa*, as the only cause of destruction. Qualities like pleasure may disappear by being supplanted by their contradictories like pain; but their case does not come in here for consideration.—[It will be noted *en passant* that the older school of the *Vaiśeṣikas* contemplates the possibility of the destruction proceeding—like creation—from cause to effect. When the *Paramāṇus* are separated, the binaries are destroyed, and consequent upon the destruction of the binaries the *tertiaries* and subsequent products meet their end in succession, the final products being accordingly destroyed the very last. The *Vedāntic* view is just the opposite of this. As *Śaṅkarāchārya* says in his *Bhāṣya* to II. iii. 14.—

विपर्ययेण तु प्रलयक्रमोऽत उत्पत्तिक्रमान्द्विवितुमर्हति ॥ तथाहि लोके
दृश्यते, येन क्रमेण सोपानमारूढस्ततो विपरीतेन क्रमेणावरोहति ।
नहि कार्ये त्रियमाणे कारणस्याप्ययो युक्तः, कारणाप्यये कार्यस्यावस्थानानुपपत्तेः ॥

The view that seems in this fashion to go against common sense was probably held by the *Vaiśeṣikas* because thereby the Creator and the Destroyer of the world was required to deal only with the atoms, and not with their ultimate products. The doctrine is passingly referred to also under II. ii. 17, lines 75-80.

—Sūtra 15, line 31.—This is the view of the *Parīṇāma* theory of causation, and its illustrations are the clay and the pots, or the gold and the ornaments, detailed in the *Chhāndogya* IV. i. 4-6.

—Sūtra 16, line 5.—It is possible to argue that because there is

an increase in the *number of qualities*, that should be no reason why the *size* of the thing should grow. As the Bhāmatī puts it—

न गन्धादिसंघातः परमाणुरपि तु गन्धाद्याश्रयो द्रव्यम् । नच गन्धा-
दीनामपचयेऽपि द्रव्यस्यापचयो भवितुमर्हति, अन्यत्वात् ।

The reply to the argument is the syllogism—

पार्थिवोऽणुः आप्यात् स्थूलः, अधिकगुणत्वात्, घटवत्—

which however is not quite convincing. A better illustration in any case would be the growth in the soul's power of will and intellection following upon the growth in the size of the human body.

—Sūtra 17, line 4 ff. — Bhāmatī introduces the rest of this discussion by—

संप्रत्युत्सृज्यं भाष्यकृद्देशेषिकतन्त्रं दूषयति ।

Sūtras 10, 17, 32, 45 form, so to say, a final flourish of the attack against the several systems.

—Sūtra 17, line 4. — The Vaiśeṣik-sūtra I. i. 4 (which is generally suspected as being an interpolation) enumerates only six padārthas, Abhāva or Negation being excluded; and Udayana in fact says—

एते च पदार्थाः प्रधानतयोद्दिष्टाः । अभावस्तु स्वरूपवानपि नोद्दिष्टः,
प्रतियोगिनिरूपणाधीननिरूपणत्वात्, नतु तुच्छत्वात् ।

The followers of the school, however, taking advantage of the occurrence of the word *abhāva* in other sūtras, declare that Kaṇāda always intended to reckon it as a distinct category, and even recognise its four-fold division. Compare in this connection the following sūtras—

क्रियागुणव्यपदेशाभावात् प्रागसत् [IX i. 1] ।

सदसत् [IX. i. 2] ।

असतः क्रियागुणव्यपदेशाभावादर्थान्तरम् [IX. i. 3] ।

सञ्चासत् [IX. i. 4] ।

यच्चान्यदसदतस्तदसत् [IX. i. 5] ।

Later on, with some theorists (compare *Yogabhāṣya* on ii. 5) *Abhāva*, acquired a positive character, as being a regular knowable category. *Śaṅkarācārya* has already attacked such a position in his *Bhāṣya* to II. i. 18, lines 45ff. See our Note to II. ii. 11, line 28f.

—*Sūtra* 17, line 13. — Compare the identical illustration brought up under II. i. 15, lines 5ff.

—*Sūtra* 17, line 19. — The *Tarkasamgraha* has the following section (79) about the *Ayutasiddha* pairs—

ययोर्द्वयोर्मध्य एकमविनश्यदपराश्रितमेवावतिष्ठते तावयुतसिद्धौ । यथा,
अवयवावयविनौ, गुणगुणिनौ, क्रियाक्रियावन्तौ, जातिव्यक्ती, विशेषानित्य-
द्रव्ये चेति ॥

The word 'Ayuta-siddha' can mean things proved not to have been ever joined together (*yu*=to join), or things proved not to have been ever torn apart (*yu*=to separate).

—*Sūtra* 17 line 22ff. — When threads produce the cloth, the cloth is the *avayavin* that must have the same location as the *avaya-vas*, the threads, and be intimately associated with them. But when the colour of the threads produces the colour of the cloth, the latter is not an *avayavin* made of the sum of the former. When, for instance, threads of different colours are joined together to produce a variegated piece of cloth, the colour of the cloth is not a mere sum of the colours of the former. It is a *new* colour called 'chitra' or variegated, the total impression of which *as a unit* is so different from the isolated impressions of the coloured patches. Moreover, if the colour of a *paṭa* with alternate patches of, say, red-yellow-black be regarded merely as = $r + y + b$, and not a new distinctive colour called *chitra*, r would be $\frac{1}{3}$ rd of the colour of the *paṭa*, and so also y and b ; but there would be no *one* colour pervading the *whole* *paṭa*. This means that the *paṭa* as a whole, having no colour belonging to it, would be invisible; for, it is only coloured substances that our eyes can see. This explains why the *Nyāya-Vaiśeṣika* theorists reckon "chitra" as a separate colour. Hence, the colour of the cloth must have a distinct location from the colour of the threads. It is assumed, accordingly, that the *Paṭarūpa* resides upon the *Paṭa*,

and not upon the Tāntus. But the Pata itself has the same location as the Tāntus. This is introducing a distinction without a difference, particularly after the present further assumption of the *dravya* and the *guṇas*, or the *avayavin* and the *avayavas*, being "apṛithag-deśa." So the assumption becomes gratuitous.

—Sūtra 17, line 32ff. — A conjunction is defined as—

अप्राप्तयोस्तु या प्राप्तिः स संयोग उदीरितः ।

It is a "dvishṭha" property, or one residing on two members, one or both of which have to move before they can be brought into conjunction. It is therefore "anyatarakarmaja" or "ubhayakarmaja." Śāṅkarāchārya is going to prove that on the admission of the Vaiśeṣhikas themselves these three characteristics of *Samyoga* are true in the case of *Samavāya*, and hence the hypothesis of *Samavāya* is a needless multiplication of entities. The Vaiśeṣhikas define the *Kārya* as—

कारणनियतपश्चाद्भावित्वं कार्यत्वम् ।

and the *Kāraṇa* as—

कार्यनियतपूर्ववृत्तित्वं कारणत्वम् ।

On their own admission then the *Kāraṇa* can exist independently of the *Kārya* that is yet to be. And if the Vaiśeṣhikas argue that this case is in a sense covered by their very definition of "ayuta-siddhi," viz.—*ekam avinaśyat* etc., seeing that the *kārya* is still in the womb of the future and so non-existing at the present moment, the objection can still be urged that thereby they are postulating a relation between non-existence (*Kārya*) and existence (*Kāraṇa*), which, as we already pointed out (II. i. 18, lines 45ff.), is an untenable position, inasmuch as every relation demands two *positive* terms as its correlates. And if to obviate this it is replied that the *Kārya* first comes into being and then effects the (*samavāya*) relation with the *Kāraṇa*—so that the relation becomes between two existing entities, we can still urge that in that very first moment of its existence the *Kārya* in any case remains without a connection with *Kāraṇa*, which, if admitted, would give the go to the painfully formulated distinction between "yutasiddhayoḥ samyogaḥ" and "ayutasiddhayoḥ samavāyaḥ."

—Sūtra 17, line 39. — If *samyoga* necessarily requires movement on the part of at least one of the two objects brought into

conjunction, how is such a movement possible in the *samīyoga* between ether (which, being all-pervading, cannot move) and the *kārya* in the first moment of its origination, when, as is assumed, no qualities and no movements of any kind are developed in it, it then possessing a mere *jāti* ? Compare II. ii. 11, line 34.

—Sūtra 17, line 48.—Śāṅkarāchārya obviously implies that a line stands for the numeral one. Now, a horizontal line represents the numeral one in older pre-Gupta inscriptions. The Gupta inscriptions give a slight curvature to the line, and the post-Gupta inscriptions make it slanting. Some North-Indian scripts make it also a perpendicular line. Since all these numeral notations can equally serve the purpose of the illustration in the text, we cannot determine to what particular system of notation Śāṅkarāchārya is here referring. An identical illustration occurs also in the *Yogabhāṣya* under iii. 13. The Decimal system of notation presupposed in these illustrations was in vogue long before the days of Śāṅkarāchārya. The oldest epigraphic instance of its use so far discovered is the Gurjara inscription of A. D. 595. The system is known to Varāhamihira (6th century A. D.).

—Sūtra 17, line 51. —Śāṅkarāchārya wants to prove that neither *samīyoga* nor *samavāya* exists as an entity beyond the two objects that are in relation. It is the proving of an *abhāva* or negation ; and for this, according to Vedānta, a different proof, viz., ‘ *Anupalabdhī* ’ is to be employed. To quote the *Vedāntaparibhāṣā*—

तथाहि स्फीतालोकवति भूतले यदि घटः स्यात् तदा घटोपलम्भः
स्यादित्यापादनसंभवात् तादृशभूतले घटाभावोऽनुपलब्धिगम्यः । अन्वकारे
तु तादृशापादनासंभवान्नानुपलब्धिगम्यता ॥

Similarly, here the *āpādana* or *prasañjana*, i. e., argument by *reductio ad absurdum*, takes the form : If *samavāya* had been a real independent object, there is no reason why it should not have been perceived as such : it accordingly is “ *upalabdhi-lakṣhaṇa-prāpta* ” or meets all the conditions for its perception, if it had existed ; but we do not perceive it ; *ergo*, it does not exist.

—Sūtra 17, line 51.—Against the Siddhānta view that words designating relations (such as *samīyoga*, *samavāya*, etc.) do not denote an entity distinct from the two objects that are in relation, but that they point simply to a specific way of looking at

the objects in question, the Pūrvapakshin argues that if *saṁyoga*, *samavāya*, etc. are mere designations of the objects-in-relation, they ought to be, like any other synonyms of the objects, always predicable of them—which means that the things must be always conjoined and never disjoined. But the reply is simple enough. Even the so-called ordinary synonyms are not invariably interchangeable. From certain points of view one synonym is preferred to another. So can it also be here. When one says that the monkey is on the tree, he does not posit the existence of a *new* entity like *saṁyoga* being in relation with the two objects viz., the tree and the monkey. He intends to imply nothing more than a way of looking at the tree and the monkey. When the monkey has left the tree, the point of view changes: that is all. It is wrong to imagine that there takes place in that case an actual destruction of the hypostatized new entity of *saṁyoga*.

—Sūtra 17, line 53. — Reverting to the statement that *saṁyoga* can be at times “*anyatarakarmaja*,” it would be difficult to explain, even so, the *saṁyoga* between atoms and the Ātman (*i. e.*, the supreme Ātman) who is to deal with them at the time of the creation and dissolution of the world; or, for the matter of that, between the individual soul and his mind, which is atomic in size. The atom can move, but never move out of the range of the Ātman who is all-pervading. It must therefore be always in contact. And since an all-pervading object is incapable of any division by parts, it is impossible at any time to say that the atom is in contact with, say, the upper part, the centre, or any of the sides of the Ātman. This means, that we will have to imagine parts where none exist or can exist. In the case of the mind and the individual soul the Vaiśeṣikas carry their imagination a step farther. They not only imagine the Ātman's possibility of coming into contact with the mind but they even imagine that when the mind enters (during sleep) a particular *nāḍī* (tube) called *Puritat*, it shoots beyond the reach of the all-pervading Ātman, so that, there being no conjunction between the mind and the soul, sound dreamless sleep becomes possible. To such straits may an initially invalid hypothesis lead us!

—Sūtra 17, line 63. — The Nyāyakandalī thus expounds the conception of a *samavāya*—

इहैदमिति बुद्धिर्यतः कारणाद्भवति, यतश्चासर्वगतानां नियतदेशावस्थिता-

नामधिगतान्यत्वानामधिगतस्वरूपभेदानामविष्वग्भावोऽपृथग्भावोऽस्वातन्त्र्यं
स समवायः, भिन्नयोः परस्परपेक्षेयस्य संबन्धकृतत्वोपलम्भात् ।

“ Samślesha ” or “ Upaślesha ” is defined as—

यत एकाकर्षणेनापराकर्षणं जायते ।

Samavāya requires that things, at first clearly and admittedly distinct, should be brought into such close union that it should be impossible thereafter to tear away any one of the two. There should be an absolute interpenetration between the two, such as there is between the trunk of a resinous tree and the exudation of lac that is to issue from it. Such penetrative union cannot exist between objects one of which is partless (either because it is, like the atom, infinitely small, or, is like the ether, infinitely large), for the simple reason that you cannot prove by pulling one of the conjoint objects (ether and earth, or ether and atom, or binary and atoms) that the other is pulled likewise, Ether being all-pervading is incapable of being dragged to a place where it does not already exist ; and the very notion of pulling off the atom suggests the adhesion of the atom by one of its sides, which would ascribe avayavas to it, which *ex hypothesi* it cannot have.— If therefore there can exist no ‘ samślesha ’ between the binary and its constituent atoms, when the gusts of winds at the time of creation carry away the binary from place to place we cannot guarantee that the constituent atoms of the binary will always suffer themselves to be pulled and wafted away along with the binary, with the result that the process of creation as described above, will not come to pass.

—Sūtra 17, line 68.—Kunḍa-badara-nyāya or the maxim of the earthen-pot and the badara-tree is the maxim where a person, having forgotten his kunḍa near the badara, and being questioned as to the whereabouts of the kunḍa replies : I placed the kunḍa just near the badara. “ But where is the badara ? ”— Oh ! Just near the kunḍa ! ” Deussen explains the maxim differently, but on what authority it does not appear. “ Kunḍa ” he translates by “ Radwaelbung,” the periphery of a wheel, and “ badara ” by “ Speichen,” or spokes. The periphery supports the spokes and the spokes support the wheel. Another current explanation of the maxim understands kunḍa as the pot or basin wherein the

badara tree has grown. Kuṇḍa is the substrate of the badara and therefore is necessarily different from it. According to the last explanation the maxim is used merely to establish the bheda or distinctness of things, while according to the first explanation it serves as an illustration of mutual interdependence.

—Sūtra 17, line 79. —The reference is to II. ii. 15, line 29.

—Sūtra 17, line 86. —To take a general review of Śaṅkarāchārya's refutation of the Vaiśeshika theory, it is evident that the Āchārya does not touch any part of that theory, beyond the atomic Cosmology. He does not touch their Epistemology or theory of knowledge, including their Logic and Psychology. These, probably, the Vaiśeshikas might have borrowed from the sister school of Nyāya, and, in any case, as regards the doctrine of inference and the exposition of logical fallacies, there was nothing very controversial there from Śaṅkarāchārya's point of view. The theology of the school and its doctrine of release was plainly a later excrescence, and could be met by the arguments used against the theistic schools in sūtra II. ii. 37-41.

—The attack, such as it is, is delivered in the following passages from the Brahmasūtrabhāshya—

II. i. 12, II. ii. 17 — "Śiṣṭāparigraha; "

II. ii. 37—"Īśvara as nimittakāraṇa; "

II. iii. 7—Against some presuppositions of atomic cosmology ;

II. iii. 18—"Chitanya as a *quality* of the Soul ; "

II. iii. 50—"Doctrine of many Souls ; "

II. ii. 11-17—The two Vaiśeshika adhikaraṇas proper, as also the "yukti" in II. i. 18.

—Confining ourselves to the present adhikaraṇas, the points discussed therein are the following—

1. Inconsistency of the school in admitting exception to the doctrine of like producing like, while blaming the Brahmvādin for doing the same (II. ii. 11^{30.55});
2. Impossibility of first motion in atoms at creation or dissolution (II. ii. 12^{17.34}, II. ii. 12^{41.46}). Impossibility of a change from motion to non-motion in the atoms (II. ii. 14);
3. Impossibility of one atom coming into conjunction with another (II. ii. 12^{34.40}, II. ii. 17^{53.62}, II. ii. 17^{70.77});

Impossibility of any "saṁślesha" between a binary and its constituent atoms (II. ii. 17⁶³⁻⁶⁹);

4. Untenability of the doctrine of Samavāya—
 - (a) "Anavasthā" (II. ii. 13¹⁻¹⁰, II. i. 18¹²⁻¹⁸),
 - (b) Why distinguish the Saṁyoga from Samavāya ? (II. ii. 13¹¹⁻¹⁵, II. ii. 17⁴²⁻⁵³, II. i. 18¹⁶⁻¹⁸);
 - (c) How does the Avayavin reside on the Avayavas with which it is samaveta ? (II. i. 18¹⁹⁻³⁴);
5. Divergence of qualities in atoms inconsistent with their character as atoms (II. ii. 15¹⁻¹¹, II. ii. 16);
6. The so-called proofs for the existence of atoms are no proofs (II. ii. 15¹¹⁻³⁵);
7. Saṁyoga not the only method of creation, and Vibhāga not the only method of destruction (II. ii. 15²⁷⁻³⁵, II. ii. 17⁷⁷⁻⁸³, II. iii. 7, *passim*);
8. Impossibility of the doctrine of six independent and yet related categories (II. ii. 17⁴⁻¹⁸);
9. Untenability of the doctrine of "Ayutasiddhi" on any of its three possible interpretations (II. ii. 17¹⁸⁻⁴¹);
10. Untenability of the doctrine of "asat-kāryavāda"—
 - (a) Scriptures declare "ananyatva" (II. i. 14, 16),
 - (b) Why definite effects from definite causes only ? (II. i. 18²⁻¹²),
 - (c) No relation possible between "existing" cause and "non-existing" effect (II. i. 18³⁶⁻⁵²), and nothing exists on which causal apparatus can operate (II. i. 18⁷¹⁻⁷⁹).

Most of the arguments of Śaṅkarāchārya are valid and convincing. The weakest is argument No. 5. The Vaiśeṣhika Realism, their distinctions between Substance, Qualities and the like, have a glamour of common-sense about them, but acuter philosophical analysis such as has been attempted by the Āchārya is bound to point out the contradictions and inconsistencies of the system. Not that there are no inconsistencies in the Vedānta itself; but apart from the backing of the Scriptures which the Vedānta can boast of, the system is undoubtedly pitched to a much higher philosophical level than is the Vaiśeṣhika.

—The origins of the Vaiśeṣhika are lost in obscurity. Although the word 'anu' occurs several times in the Upanishads, nobody has claimed that anything like the doctrine of Atomism is there fore-shadowed. There are obscure allusions to it in the Mahābhārata; in the Milindapañha, in the Āvaśyakasūtra, and in the Charakasamhitā; and it would seem that the Jainas and the school of Hinayāna Buddhists did subscribe to a belief in atoms, somewhat more crudely conceived than the full-fledged Vaiśeṣhika system. As fore-runners of the Vaiśeṣhika theory may be mentioned the doctrine of Pakudha Kachchāyana, a teacher mentioned by Buddha, who held that the four elements—earth, water, fire, air—pleasure and pain, and the soul are the seven uncreated substances; or the "Pudgala" theory of the Jains, the Pudgala or matter being in the two states of gross (sthūla), or subtle (sūkṣhma), and consisting of atoms or paramāṇus occupying specific units of space (pradeśa). That a school of Buddhists did formulate a sort of an atomic theory follows from what Śāṅkarāchārya has said in his introduction to Sūtra II. ii. 18. Interesting from this point of view are the following extracts furnished by Wassilijew, Buddhismus, p. 279 — "The Śrāvakas furthermore assume Monads that have no parts, and according to the opinion of the teacher Saṅgharakṣita these Monads do not remain adhering the one to the other, but they leave interspaces between them. They rotate round one another now this side and now that, so as to build up an aggregate. ... Moreover all the Buddhistic systems uniformly assume that there is nothing smaller than these Monads, which can neither be split open nor partitioned. They differ from one another only in the belief as to whether some of the Monads possess sides. But even when it is said in the first instance that Monads are built out of eight factors, i. e., have eight sides, still none ever maintains that they make up a mere concatenation (and not an organic unit)." And once more, Ibid. p. 308—"As regards [the Atom] the Yogāchāras assert that when a person conceives (as do the Sautrāntikas) the Monad as a compound of six sides, that invariably means that it is composed of parts; when however a person holds (as do the Vaibhāṣhikas) that these six sides constitute an (organic) unit, then it would be necessary that he should concede even a ball to be a Monad."—There are however some essential differences between Buddhistic atomism and the atomism of the Vaiśeṣhikas. Dharmottara, a Buddhist writer belonging to

perhaps the first century B.C., speaks of atoms not only of earth, water, fire, and wind, but also of colour, smell, taste, touch and the like. There are also non-material atoms like those of the sense-organs and the mind. The Vaiśeṣhikas have improved upon this theory by the formulation of the distinction between Substances and Qualities. It is also possible that the Sautrāntika doctrine of Time as divisible into infinitesimal portions called 'kṣaṇas' or instants has a great logical affinity, and probably also some historical relation, with the Vaiśeṣhika doctrine of the physical world similarly divided into infinitesimal physical parts. As the Vaiśeṣhikas are not mentioned by Kauṭilya (B.C. 300), but are named as such and the doctrines peculiar to them criticised by writers like Āśvaghoṣa and Vasu-mitra (1st century A.D.), Nāgārjuna (cir. 200 A.D.), Āryadeva (cir. 225 A.D.), and others, the origins of the System may safely be assigned towards the beginning of the Christian era. And the Sūtrapāṭha—barring possible additions to it here and there—may likewise be assigned to the same period.

—After the Sūtras the earliest extant Vaiśeṣhika text is the Bhāṣhya of Praśastapāda; but some other earlier texts (e. g. the Rāvaṇabhāṣhya) seem to have been known to, and diligently studied by, Śaṅkarācārya. The Bhāṣhya of Praśastapāda is not exactly a verbatim commentary. It omits altogether quite a large number of the sūtras and has altered the order of the sūtras quite deliberately. Vaiśeṣhika writers of consequence subsequent to Praśastapāda are—(1) Uddyotakara (7th century A.D.), author of Nyāyavārttika; (2) Vāchaspati-miśra author of Nyāyavārttikatātparyatikā (circa 850); (3) Udayana author of Nyāyakusumāñjali and Kirāṇāvali and Nyāyavārttikatātparyaparisuddhi (circa 984); (4) Śrīdhara author of the Nyāyakandali (circa 991); Śaṅkara-miśra, author of the Vaiśeṣhikasūtrapaskāra, and others. This age of commentaries and sub-commentaries had a full sway right upto the middle of the second millenium, especially as the writers had to face learned Buddhist opponents like Dinnāga, Dharmakīrti and others. Before long however the need of easy manuals was felt, and as a result we have texts like the Nyāyasāra, Tarkabhāṣā, Tarkakaumudī, Tarkasaṅgraha, and the like, which themselves have given rise to a very large mass of further commentaries and sub-commentaries. There are also indepen-

dent compilatory works like the Bhāṣāparichchheda with the Muktāvali and its further commentaries. In Bengal there arose, towards the middle of the 13th century, a modern school of Logicians whose "hair-splitting niceties and shallow profundities" have been the terror of young learners and the glory of the experts. Since the days of the great commentators ending with Vāchaspati-miśra and his immediate followers, however, there has been no significant doctrinal development in the school. — One characteristic of the school may here be briefly indicated. Although starting its career as a doctrine of Atomism, the Vaiśeṣhika very soon found the necessity of effecting an alliance with the sister school of the Nyāya, from which it borrowed its psychology, its epistemology, and the logic. The manual-writers and the followers of the "Navya-Nyāya" or Newer Logic are largely syncretic in their character. And this fact combined with the common-sense realism inherent in the system has given to most of the writings of the school a large vogue as being propaedeutic to the more advanced philosophical treatises of the other schools. The problem of the relation between Greek and Indian Atomism, as between Greek and Indian Logic, is part of a larger problem, which it is unnecessary to discuss here in any detail.

—Sūtra 18, line 1,— "Rāddhānta" is used in the same sense as "Siddhānta." An attempt is sometimes made to distinguish the two, a rāddhānta being regarded as the siddhānta of the opposed school; but the distinction is not everywhere maintained. —Sūtra 18, line 2.—The Vaiśeṣhikas are called "Semi-nihilists" because, as the Bhāmatī observes—

तेहि परमाण्वाकाशदिक्कालात्मनसां च, सामान्यविशेषसमवायानां च,
गुणानां च केषांचिन्नित्यत्वमभ्युपेत्य शेषाणां निरन्वयविनाशमुपयन्ति ॥

Also in their "Asatkārya" theory of causation they admit the reduction of existence to non-existence and non-existence to existence, permitting the duration of existences like the body etc. only for "three moments" (that of utpatti, sthiti, and pralaya). The Buddhists go one step further in reducing everything to existence and momentariness. Hence the comparison and the contrast. Compare Ānandagiri on the passage.—

वैशेषिका देहादेस्त्रिक्षणस्थायित्वमाश्रिताः । तन्मते निरस्ते, तन्मात्रमपि
यैर्नेष्टुं तन्मतमतिशयेन नापेक्षितव्यम् ।

—Sūtra 18, line 3. — As Śaṅkarāchārya has himself opened the topic, it would be convenient to find room here for a historical and bibliographical Note on Buddhism and its main schools. The date of Gautama (Pāli, Gotama), the Buddha (or Enlightened One), is determined by a reference in Buddhaghosha's introduction to his commentary called the Samantapāsādikā on the Vinaya-piṭaka, as also in the Ceylonese Chronicles called the Mahāvamsa and the Dipavamsa, to the effect that the Emperor Aśoka was anointed to sovereignty 288 years after the death of the Buddha. The general consensus of opinion places the death of the Buddha in B. C. 477 or circa 480, and his birth eighty years previously. The story of his miraculous birth; his early training for a prince's career; his meeting the "four signs" of age, disease, death and recluse, which wean him from the passing pleasures of the world; his great Renunciation or "abhinish-kramaṇa" at the age of 28; his search for Truth for seven years; the Temptation; the Enlightenment under the "Bodhi" tree at the age of 35; the Preaching of the Law for nearly 45 years; the establishment of the Saṅgha or Mendicant Order; and his end or "Parinirvāṇa;" is told in many popular books, and we need not repeat it here. Years after the death of the Buddha, and in a special Council of Elders convened for the purpose the Canon embodying, if not the Buddha's *ipsissima verba*, at least the principal tenets and the well-remembered sayings and anecdotes of the Master, was collected together in what is styled the "Tipitaka" or the Three Baskets written in what is known as the Pāli language, which must have differed, and in fact does differ, in some respects from the language in which the doctrine was originally preached. The contents of the "Tipitaka" are as follows—

I—VINAYA-PITAKA OR DOCTRINES OF THE CHURCH—

- (i) Suttavibhaṅga (register of sins);
 - (a) Pārājika (causing excommunication)
 - (b) Pācittiya (liable to expiation)
- (ii) Khandhakas (special treatises);
 - (a) Mahāvagga (main rules for the order)
 - (b) Chullavagga (minor regulations)
- (iii) Parivāra-pāṭha (supplement and index)

II—SUTTA-PĪṬAKA OR COLLECTION OF DISCOURSES—

- (i) Dighanikāya (52 longer discourses);
- (ii) Majjhimanikāya (152 discourses of middle length);
- (iii) Saṃyuttanikāya (50 discourses in groups);
- (iv) Aṅguttaranikāya (over 2300 enumerations of principles in ascending numerical groups);
- (v) Khuddakanikāya (miscellaneous collections);
 - (a) Khuddakapāṭha (short anthology)
 - (b) Dhammapada (423 pithy stanzas)
 - (c) Udāna (inspired utterances)
 - (d) Iti-vuttaka (terse sayings)
 - (e) Suttanipāṭa (additional discourses and questions)
 - (f) Vimānavatthu (tales of heavenly palaces)
 - * (g) Petavatthu (tales of goblins)
 - * (h) Theragāthā (107 songs of monks)
 - * (i) Therīgāthā (73 songs of nuns)
 - * (j) Jātaka-verses (concluding Gāthās of the 547 legends of the Buddha in his earlier births)
 - (k) Niddesa (commentary on (e) above)
 - (l) Paṭisambhidāmagga (pathway of the Arhat)
 - * (m) Apādāna (exploits and miracles)
 - * (n) Buddhavaṃsa (twenty-four Buddhas)
 - * (o) Chariyāpīṭaka (twenty-five Jātaka tales)
 - † (p) Milindapañha (questions of Menander)
 - † (q) Nettippakaraṇa (observations on the right-path)
 - † (r) Peṭakopadesa (introduction to Pīṭakas)
 - † (s) Suttasaṃgaha (another anthology).

III—ABHIDHAMMA-PĪṬAKA OR SYSTEMATIC PHILOSOPHY—

- (i) Dhammasaṅgani (psychological categories);
- (ii) Vibhaṅga (exposition and continuation of the above);
- (iii) Kathāvatthu (refutation of heretical views);
- (iv) Puggalapaññatti (types of persons and characters);
- (v) Dhātukathā (physical categories);
- (vi) Yamaka (questions in pairs with alternating positive and negative answers);
- (vii) Paṭṭhānappakaraṇa (abstruse metaphysical discourses).

* Not found in Siamese Tipiṭaka.

† Recognised only in Burmese Tipiṭaka,

The contents of these vary in age, authenticity and importance ; but in their *ensemble* they formed the Sacred Canon of what is called the Southern, the Pāli, the Orthodox, the "Mahāsaṃghika" or the "Sthavira " school of Buddhism, which came to formulate within it 18 smaller sub-schools or sects. These schools belong to a very early period of the history of Buddhism, and there do not seem to have been in existence amongst them any radical differences of opinion on the essential points. They in fact agreed more than they differed; acknowledged, with a variation in emphasis, practically the same Sacred Canon; and, compared with the later schools whose Canon was written in Sanskrit, these are generally known as schools of the Hīnayāna or the Lower Vehicle. The schools designated by Śāṅkarācārya as "Sarvāstivādin" and further sub-divided into the "Sautrāntikas" and the "Vaibhāshikas" belong to this so-called "Hīnayāna." The Hīnayāna was, speaking broadly, content to regard the Buddha as a simple mortal, exceptionally endowed, who lived a righteous life on earth and taught men the true path of salvation, which need not be beyond the reach of ordinary men if they are willing to lead a life of self-discipline and mystic, supra-mundane contemplation. The Hīnayāna thus retains several features of the primitive or historical Buddhism, and it has not developed any special aptitude for metaphysical theories and logical subtleties. As contrasted with the Hīnayāna, the Mahāyāna or the "Greater Vehicle" transformed the Buddha, or rather the Bodhisattvas (future Buddhas, being in fact the Buddhistic analogues of many Hindu divinities), into great mythological figures with hosts of attendant divinities, who had to be worshipped by elaborate symbols, ceremonials, and devotion. The Mahāyāna developed special philosophical doctrines, such as the "Śūnyavāda" or Negativism and the "Vijñānavāda" or Idealism, and they brought into existence, by way of comments and independent treatises based on some Buddhist "Suttas," a large mass of canonical literature written in Sanskrit of a somewhat debased type. Sir Charles Eliot (*Hinduism and Buddhism*, II, p. 4) gives the following very fair characterisation of the true spirit of the Hīnayāna and the Mahāyāna schisms: "But in general the Mahāyāna was more popular, not in the sense of being simpler, for parts of its teachings were exceedingly abstruse, but in the sense of striving to invent or include doctrines agreeable to the

masses. It was less monastic than the older Buddhism, and more emotional; warmer in charity, more personal in devotion, more ornate in art, literature, and ritual, more disposed to evolution and development, whereas the Hinayāna was conservative and rigid, secluded in its cloisters, and open to the plausible, if unjust accusation of, selfishness." The Hinayāna phase of Buddhism may be said to begin from about B. C. 300, and it continued—so far as India was concerned—upto about A. D. 500. In Ceylón, Burma and Siam it is still a living school. The Mahāyāna phase dates from about A.D. 100, and in Northern India it continued to be active almost upto A. D. 800. In China and Japan and Tibet it is even now the national religion, having developed therein further innumerable schisms, and sects, and sub-sects. Some of the recent discoveries in Central Asia, and a more penetrating study of the texts and translations from Tibetan and Chinese sources have made it probable that there has been a gradual transformation of the Hinayāna into the Mahāyāna, so that we have to recognise not only a later and an earlier Hinayāna, but likewise a later and an earlier Mahāyāna, the earlier dating from a period prior to the commencement of the Christian era, and the later associated in particular with the names of Nāgārjuna, Āryadeva, Asaṅga and Vasubandhu. Accordingly, Yamakami speaks in his *Systems of Buddhist Thought* (p. 173) of the Sūnyavāda of the Hinayāna as developed by Harivarman, and of the Sūnyavāda of the Mahāyāna, designating Harivarman's doctrine as a stage of transition coming between Hinayānism and Mahāyānism.

—Sūtra 18, line 4.—The arguments of the Buddha—and of the majority of successful teachers for the matter of that—have been *ad hominem*, and no wonder if they had to use different starting points for arguing with differently endowed disciples. Bhāmati quotes Nāgārjuna's Bodhichittavivaraṇa to the same effect—

देशना लोकनाथानां सत्त्वाशयवशानुगाः ।

मिथ्यन्ते बहुधा लोक उपायैर्बहुभिः पुनः ॥

गम्भीरोत्तानमेदेन क्वचिच्चोभयलक्षणा ।

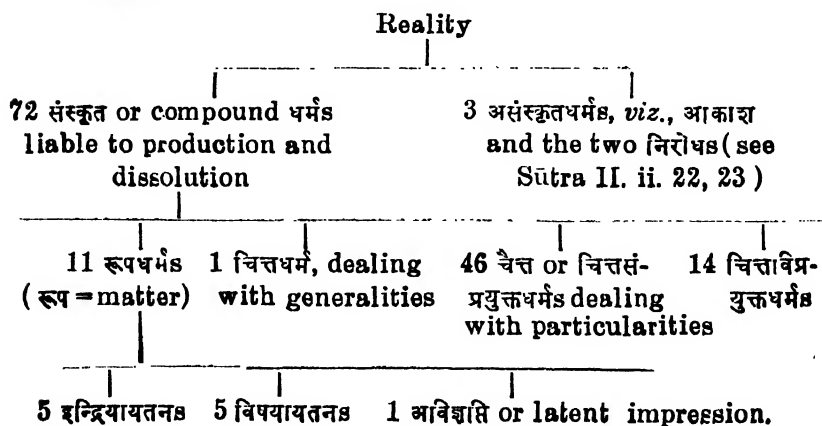

भिन्नापि देशनाभिन्ना शून्यताद्वयलक्षणा ॥

—Sūtra 18, line 5.—It is usual to divide the Sarvāstivādins into Mūla-Sarvāstivādins and the Sarvāstivādins proper. The latter seem to have possessed a part of their canon in Sanskrit, and fragments of their Saṃyutta and Aṅguttara, and of the Dhammapada and of Suttanipāta and Pātimokkha have been in recent years discovered in Eastern Turkestan in original Sanskrit, and even in translations into some of the old languages current in that region, such as, Tocharian, Uiguric, Soghdian, etc. The Sarvāstivādins are further divided into Sautrāntikas, who stopped short of the Suttapiṭaka, and refused to recognise the canonicity of the Abhidhammapiṭaka, alleging that the Buddha had taught independent "Sūtras" on the subject; and the Vaibhāshikas who not only insisted upon the recognition of all the three Piṭakas but even compiled a "Vibhāshā" or commentary on the Abhidhamma, for which in particular they wanted to claim absolute authoritativeness. What according to the tradition is known as the Fourth Council of the Buddhist Saṅgha (but what in sober history was probably the Second) under the leadership of King Kanishka (circa 100 A.D.) fixed the canon of the Sarvāstivāda school, which is even believed to have been, by the king's order, engraved on copper-plates and buried under some stūpa. The first authoritative text of the Sarvāstivādins is the Abhidharmajñāna-prasthāpanaśāstra ascribed to the venerable Kātyāyaniputra. There are also a few other texts ascribed to Śāriputra, Maudgālyana, Devaśarman and Vasumitra. These texts can now be recovered only from Chinese and Tibetan translations, which are likely to contain not a few distortions and perversions of the translators, who worked at a much later stage of religious and philosophical development.

—Sūtra 18, line 6.—The main internal difference between the Sautrāntikas and the Vaibhāshikas is that the Vaibhāshikas believed that the external world was *both* perceptible as well as inferable, whereas the Sautrāntikas regarded it as only inferable from the diversity with which our ideas are imbued. "The diversity of cognitions in an observer, himself remaining the same, is explicable only by the operation on him of external things." The Vaibhāshikas argue that the Sautrāntika inference to prove the reality of the object is invalid, because all knowledge being reduced to inferability no *drisṭānta* and no *invari-*

able concomitance can be established. Hence they ought to concede the perceivability of the world. Another important though somewhat abstruse point of difference between the Vaibhāshikas and the Sautrāntikas relates to their conception of Time. The former hold that Time past, present and future is a real existence being perceptible as regards present and future, but only inferable as regards the past—the difference between these three states of past, present, and future itself depending, upon a difference of efficiency. The Sautrāntikas object to this theory on the ground that it implies as a corollary the existence of a permanent substance persisting throughout time. The Sautrāntikas also object to distinguishing between the past, the present, and the future on the ground of efficiency. "The entity is itself the efficiency, and is synonymous with its duration period, or the time of its appearance." A third essential point of difference between the two schools was that the Vaibhāshikas regarded the Buddha as essentially human, while the Sautrāntikas seem to have already recognised a large number of Buddhas, as well as the doctrine of the "Dhārmakāya" belonging to each of them. We need not here detail the other minor differences obtaining between the two schools.

—Sūtra 18, line 7.—The Sarvāstivādins have divided the whole Reality into seventy-five "Dharmas" or kinds of existences. The complete classification can be exhibited in the following tabular form :—

The above is the "Bāhya" or objective classification of Reality. The "Antara" or subjective classification is made up of the five "Skandhas" (see line 10 of the text), twelve "Āyatanas," namely, Mana-āyatana added to the five Indriyāyatanas, and Dharmāyatana added to the five Viśayāyatanas, and eighteen "dhātus" made up of the six Indriya-dhātus (including the manas), six corresponding Indriyavijñāna-dhātus, and six Indriyaviśaya-dhātus (that of the manas being a "dharma-dhātu"). These 75 dharmas are believed to be permanent in their noumenal form, but impermanent or transitory as phenomena. This elaborate classification is given in Vasubandhu's Abhidharmakośa-śāstra in the form in which it exists in Hiuen Tsang's Chinese translation of cir. A. D. 650, and it is quite probable that the classification has undergone considerable elaboration. The classification given by Śaṅkarācārya is much more likely to represent the views as they were originally formulated by Sarvāstivāda writers, as it seems evident on the very face of it that Śaṅkarācārya's knowledge of the tenets of the school was derived from accurate first-hand information. Moreover, there was the Sūtrakāra before the Bhāṣyakāra, and as all the Bhāṣyakāras agree in their interpretation of the sūtras comprised under the present adhikaraṇa, we need entertain no doubts as to the veracity of the account of the Sarvāstivāda philosophy as here presented. Yamakami Sōgen in his *Systems of Buddhist Thought* is therefore not at all convincing when he accuses Śaṅkarācārya of misunderstanding, and even of deliberately misrepresenting, the views of the system he is attacking. Śaṅkarācārya never does this. Even A. B. Keith has conceded the practical accuracy of the Ācārya's representation of the views of his opponent.

—Sūtra 18, line 8. — The Sarvāstivādins hold a kind of atomic doctrine. According to them the Paramāṇu is the minutest form of "rūpa" which is said to be "indivisible, unanalysable, invisible, inaudible, untastable, and intangible." A group of six such Paramāṇus around a central Paramāṇu goes to form an Anu, which is the *minimum sensible*, all the larger material things in the universe being aggregated of Paramāṇus. Now what makes the Paramāṇus conglomerate into an Anu is a quality of adhesiveness (sneha), what makes them capable of

motion is a quality of propulsion (*īraṇa*), what makes them produce warmth of life and even fire by friction or clashing is a quality of heat (*ushṇa*), and what makes them non-interpenetrable is a quality of resistance or hardness (*khara*), which all the *Paramāṇus* are believed to possess alike. The presence of these four qualities in the *Paramāṇus* leads to the constitution of *Aṇus* and larger aggregates, and eventually the four Elements of water, air, fire and earth. But since these Elements as we actually know them possess only one of the four qualities of their constituent *Paramāṇus* in a pre-eminent degree, the *Sarvāstivādins* take recourse to the supposition that only one of the four qualities is active in an element, the other three being for the time latent or dormant.

—*Sūtra* 18, line 8f. — In view of the exposition given in the preceding Note it is clear that "*khara-snehōshuṇaṇasvabhāva*" belongs to *all* the *Paramāṇus* of *all* the *Bhūtas* and not "*khara-svabhāva*" to earth *Paramāṇus*, "*snehasvabhāva*" to water *Paramāṇus*, etc., as the *Bhāmatikāra* and the other commentators of Śaṅkarācārya interpret the passage. The words of the *Bhāshya* are capable of both the interpretations, and since, on the admission of the *Sarvāstivādins* themselves, the several elements contain only one of the four qualities in a pre-eminently active condition, there is an explanation for the mistake (if mistake it be) into which the commentators have fallen.

—*Sūtra* 18, line 10. — Just as in the outer world there are the *Paramāṇus* eventually constituting the four elements, the five *indriyas* or sense-organs (which are probably specific refined *Paramāṇus*), and the five qualities of colour, sound, smell, taste, and touch which these *indriyas* perceive,—all presupposing a grouping or aggregation of the external Reality on the basis of the division into the four elements, each of which accentuates only one of the four inherent dispositions (*svabhāvas*) of the *Paramāṇus*,—so also in the inner world there are (1) the mental images produced by the working of the *indriyas* upon the objects; (2) the latent impressions produced by these mental images, which mix up in the texture of the subsequent mental-images, as well as certain innate ethical predispositions; (3) the specific concepts or ideas formulated by the working of the mind upon the data of sense; (4) the pleasure-pain sensations

consequent upon these functionings of the mind ; and (5) the consciousness of the knowing subject as the presupposition of all these activities. And these types of internal cognitions also lend themselves to a classification by five thought-phases (Skandhas) of (in the above order of their presentation) rūpa, saṃskāra, saṃjñā, vedanā, and vijñāna. Compare on this point the remarks of the Ratnaprabhā—

सविषयेन्द्रियाणि रूपस्कन्धः, विषयाणां बाह्यत्वेऽपि देहस्थेन्द्रियग्राह्यत्वा-
दाध्यात्मिकत्वम् । अहमहमित्यालयविज्ञानप्रवाहो विज्ञानस्कन्धः । सुखा-
नुभवो वेदनास्कन्धः । गौरश्च इत्येवं नामविशिष्टसविकल्पकप्रत्ययः
संज्ञास्कन्धः । संस्कारस्कन्धो रागादयः क्लेशाः, उपक्लेशाश्च मदमानादयः,
धर्माधर्मौ चेति ॥

And just as the external aggregates originate from the Paramāṇus that have a fourfold primitive nature, so also it might be conceivable that the internal thought-phases proceed from combinations of certain “units of mind-stuff” of specific but uniform disposition. It is not certain whether the Sarvāstivādins posited such units of mind-stuff, but it is in any case clear that they wanted these units as also the Paramāṇus—all originally uniform in nature—to give rise to compounds wherein only one of the original common dispositions would become accentuated, while the others remain latent and allow themselves to be subordinated,—these compounds in fact constituting, and accounting for, the variety of all the physical and mental phenomena in the world.

—Sūtra 18, line 12f. — Mr. Yamakami Sōgen makes too much of a trifle when he objects to Śaṅkarācārya's expression “*anuhetuka*” in line 12. It is true that the Bhūtas are produced out of Parmāṇus and the formation of Aṇus out of Paramāṇus is possible only because the Paramāṇus have the elemental qualities of sneha, irāṇa, etc. inherent in them, which cause the Paramāṇus to hold together. In a sense therefore the Bhūtas (more accurately their qualities) are the cause of Aṇus, and not the Aṇus the cause of Bhūtas. But surely since Śaṅkarācārya had said above (line 8f.) “*prithivyādiparamāṇavaḥ.....saṃhanyante*” his present expression “*anuhetuka.....saṃhati*.....” must be taken in the light of

the earlier assertion. The distinction between *Paramāpus* and *Apus* need not have so much obsessed the mind of Śāṅkarāchārya, as it was not much involved in the main point of the argument. And when futhermore the same Japanese scholar objects to the term "*pañchaskandhīrūpa*" because it is not a Buddhist technical term, it is doubtful if he has realised that the word "*rūpa*" in that compound is not—any more than the word "*rūpa*" in the expression "*Bhūtabhautikasamhatirūpa*"—the same as the technical "*rūpa*" of the *Sarvāstivāda* philosophy; or that "*pañchaskandhī*" is a *Dvigu* compound.

—*Sūtra* 18, line 15. — We are told that the *Sarvāstivādins* thought of the *Paramāpus* as 'living.' They can accordingly enter into combinations with one another under the influence of given causes (*hetu*) and conditions (*pratyaya*); but being admittedly devoid of intelligence, how is it that there should result an unfailing uniformity in their movements and functions, and whence comes it that the causes and conditions, under the influence of which they function, tend uniformly to produce the same or similar results? Not only this, but the results are known to adapt themselves to changing requirements as though directed by an intelligent controller. The atoms of earth, for instance, agree uniformly to subordinate their other three dispositions to the prevailing disposition of hardness (*kharatva*), the atoms of water to that of adhesiveness (*sneha*), and so on; and the elemental (*bhautika*) products likewise continue to preserve the characteristics and dispositions of the elements. As the *Bhāmati* puts it—

चेतनो हि कुलालादिः सर्वं मृद्गण्डाद्युपसंहृत्य समुदायात्मकं घटमारचयदृष्टः ।
न ह्यसति मृद्गण्डादिव्यापारिणि विदुषि कुलाले स्वयमचेतना मृद्गण्डाद्यां
व्यापृत्य जातु घटमारचयन्ति । न चासति कुविन्दे तन्तुवेमादयः पटं वयन्ते ।
तस्मात् कार्योत्पादस्तदनुगुणकारणसमवधानाधीनस्तदभावे न भवति । कार्यो-
त्पादानुगुणं च कारणसमवधानं चेतनप्रेक्षाधीनमस्यां चेतनप्रेक्षायां न भवि-
तुमुत्सहत इति कार्योत्पत्तिश्चेतनप्रेक्षाधीनत्वव्याप्ता व्यापकविरुद्धोपलब्ध्या
चेतनानधिष्ठितेभ्यः कारणेभ्यो व्यावर्तमाना चेतनाधिष्ठितत्वं एवावतिष्ठते ॥

—*Sūtra* 18, line 15f. — The case of the *Chitta* and the *Chaitta samudāya* is not much different from that of the *Bhūta* and the *Bhautika samudāya*. Mental ideas and impressions as well as

feelings of pleasure and pain follow a regularity in sequence which is in them even more marked than in the happenings of the physical world outside. Who regulates the process? It cannot be the Chitta or the mind, because the mind is the resultant of the five Skandhas, whereas we are in search of a regulating principle which is outside and prior to the aggregate of the five Skandhas (that is to say, independent of the sentient individual with his body and his mind) and which yet regulates them. Moreover the Chitta can function only upon the data of the senses, and these senses and the whole body, although the *sine qua non* for the functioning of the mind, have yet to exist. To quote from the Bhāmati, once more:—

यद्युच्येत, अद्धा चेतनाधीनैव कार्योत्पत्तिः, अस्ति तु चित्तं चेतनम् ।
तद्धि इन्द्रियादिविषयस्पर्शं सत्यभिज्वलत् तत्कारणचक्रं यथायथा कार्याय पर्याप्तं
तथातथा प्रकाशयदचेतनानि कारणान्यधिष्ठाय कार्यमभिनिर्वर्तयतीति, तत्राह—
न खलु बाह्याभ्यन्तरसमुदायसिद्धिमन्तरेण चित्ताभिज्वलनं, ततस्तु नामिच्छन्
दुरुत्तरमितरेतराश्रयमाविशेदिति । नच प्राग्भवीया चित्ताभिधीप्तिरुत्तरसमुदायं
घटयति, घटनसमये तस्याश्रितातीतत्वेन सामर्थ्यविरहात् ॥

—Sūtra 18, line 17. — The cessation of activity leads to the annihilation of all kleśas or passions, and thus paves the way to the *summum bonum* of Nirvāṇa. Now this Nirvāṇa was, to some Buddhist thinkers at any rate, an absolute cessation of all pravṛtti or activity; but even if one were to argue that the extirpation of passions really meant to the Buddhists their transmutation under the influence of knowledge, hate being turned into love, etc., still that involves at least a voluntary reversal in the direction of the pravṛtti, which is impossible in the absence of a deliberate and intelligent exercise of the will.

—Sūtra 18, line 18. — The term “Āśaya.” is explained as—

आशेरतेऽस्मिन् कर्मानुभववासना इत्याशयः ।

and Ānandagiri gives “Saṁtāna” as its synonym, while Bhāmati and Ratnaprabhā render it by “Ālayavijñāna.” The latter term is thus defined —

तत् स्यादालयविज्ञानं यद्भवेद्दहमास्पदम् ।

तत् स्यात् प्रवृत्तिविज्ञानं यन्नीलादिकमुल्लिखेत् ॥

It is the realisation of the self as the conscious subject underlying all individual cognitions, and is therefore a continuous stream of consciousness. It is not exactly what is called the "Ahankāra," which means the identification of the self of this moment with the self of a past moment, but it comes closer to the "anuvyavasāya" of Nyāya philosophy (which is a state of consciousness in which one feels oneself perceiving, willing, etc.)—only it is an ever-present consciousness that is running and changing, but never entirely inhibited except, may be, in swoon and sound sleep. This conception was elaborated by the Vijñānavāda school of Buddhism, but traces of it may be seen even in the Mahāsaṅghika doctrine of a root-consciousness and in one or two other Hīnayāna positions. Śaṅkarācārya in any case is careful to use a distinct term (*āśaya*) in place of the *Ālayavijñāna*; and as he could not have invented the term, he must have derived it from some Hīnayāna text no longer available to us. The conception is an attempt to explain the self or the personality as a continuum or *saṁtāna*. This *saṁtāna*, the Sautrāntikas declared, could not only be self-conscious but was even endowed with something like the freedom of the will, although in the same breath they asserted that "Karma" directed the course of the *saṁtāna*. The theory (which even some of the Hīnayāna schools themselves rejected) was an attempt to find a substitute for the *Ātman* which would not involve the admission of its eternality. The *Ātman* of ordinary knowledge is a mere convention. Every time that one looks within oneself one finds some psychic phenomenon happening, but one never sees the mere self or *Ātman* in his nudity, for the simple reason that such a thing, say the Buddhists, does not exist at all. And the false notion of an abiding individuality beneath the transient flux of consciousness is a mere fiction explicable on the analogy of the false notion of an abiding flame of a specific size which we imagine the lamp to possess, whereas in reality there is merely a succession of latent, predisposing forces (*e. g.*, the air-pressure conditions) which give us the false appearance of the abiding individuality of the flame. Śaṅkarācārya's point of criticism is that if this *āśaya* or *saṁtāna* is to give a stamp of individuality to the whole series, it cannot be any given member of the series, but must be distinct from the series. And if distinct and if also

eternal, it is tantamount to the Ātman of the Vedāntins, who would not then quarrel about mere name.

—Sūtra 18, line, 19. — If the Āśaya be merely momentary, during the one moment which is all the life that is given to it, it cannot be able to achieve anything but its mere existence. As the Bhāmati says—

अपिच प्रवृत्तिः समुदायिनां व्यापारः । नच क्षणिकानां व्यापारो युज्यते ।
व्यापारो हि व्यापारवशाश्रयस्तत्कारणकश्च लोके प्रसिद्धः । तेन व्यापारवता
व्यापारात् पूर्वं व्यापारसमये च भवितव्यम्, अन्यथा कारणत्वाश्रयत्वयोगात् ।
नच समसमययोरस्ति कार्यकारणभावः । नापि भिन्नकालयोराधाराधेयभावः ।
तथाच क्षणिकत्वहानिः ॥

Ratnaprabhā also argues in the same way—

क्षणिकस्य जन्मातिरिक्तव्यापारो नास्ति । तस्मात् तस्य परमाण्वादिमेलनार्थं
प्रवृत्तिरनुपपन्ना क्षणिकत्वव्याघातादित्यर्थः ॥

—Sutra 19, line 2. — The Buddhist doctrine of causation is quite peculiar and needs to be very carefully studied. The Sarvāstivādins classify the causal phenomena into “bāhya” or external and “āntara” or “ādhyātmika” or internal. The Vijñānavādins naturally make all causation an ideal phenomenon. The causes are divided into direct causes or causes proper (*hetu*), and general contributory causes or conditions (*pratyaya*): “Pratyayo hetūnām samavāyah; hetuṁ hetum praty ayante hetvantarāṇi teṣhām ayamānānām bhāvaḥ pratyayaḥ; samavāya iti yāvat.” The doctrine is known as “Pratityasamutpāda (Pāli. Paṭiccasamuppāda)” or “Origination by an interdependent causal chain.” Vācaspati-miśra in his Bhāmati gives a very lucid explanation of the theory, which he must have derived from some Buddhist source like the “Śālistambasūtra,” and which we freely quote—

तत्र बाह्यस्य प्रतीत्यसमुत्पादस्य हेतूपनिबन्धः -- यदिदं बीजादङ्कुरः अङ्कुरात् पत्रं, पत्रात् काण्डं, काण्डान्नालो, नालाद्गर्भो, गर्भाच्छूकः (awn, Ma-rāṭhu कूस, कुसळ), शूकात् पुष्पं, पुष्पात् फलमिति । असति बीजेऽङ्कुरो

'The two varieties of the "adhyātmika-pratītyasamutpāda" will be explained presently. The point of this theory may be thus brought out. It is enough, the Buddhists would say, that we are able to assign, for a given effect, a specific number of causes and conditions, and for each of those specific number of causes and conditions a specific number of other causes and conditions which brought each of them into operation at the time when and in the manner in which each of them operated to produce their joint result. Further, if in a given instance a result other than the normal ensues, we can explain what other causes beyond the ordinary were functioning, or what ordinary causes had ceased to function, and we can give reasons for this excess or deficiency. What more need we ask for? The reply is obvious and convincing. We know that under given circumstances fire will always burn and water will always drown. Whence this uniformity in Nature, which enables us to deduce what we call Laws of Nature? Unless the process of causation is

assumed to be under the direction of some wise Intelligence who is detached from and independent of the world, life which is based upon intelligent anticipations of events would be impossible even for a single moment. See the Bhāṣhya, lines 21-25 below.

—Sūtra 19, line 3ff. — Vāchaspatimiśra explains the "Avidyā" series of causation as follows—

आध्यात्मिकः प्रतीत्यसमुत्पादो द्वाभ्यां कारणाभ्यां भवति, हेतूपनिबन्धतः प्रत्ययोपनिबन्धतश्च । तत्रास्य हेतूपनिबन्धो—यदिदमविद्याप्रत्ययाः संस्काराः जातिप्रत्ययं जरामरणादीति । अविद्या चेन्नाभविष्यन्नैव संस्कारा अजनिष्यन्त जातिश्चेन्नाभविष्यन्नैव जरामरणाद्य उदपत्स्यन्त । तत्राविद्याया नैवं भवत्यहं संस्कारानभिनिर्वर्तयामीति, संस्काराणामपि नैवं भवति वयमविद्यायाभिनिर्वर्तिता इति जात्या अपि नैवं भवत्यहं जरामरणाद्यभिनिर्वर्तयामीति, जरामरणादीनामपि नैवं भवति वयं जात्यादिभिनिर्वर्तिता इति । अथच सत्स्वविद्यादिषु स्वयमचेतनेषु चेतनान्तरानधिष्ठितेष्वपि संस्कारादीनामुत्पत्तिः, इदं प्रतीत्य प्राप्येदमुत्पद्यत इत्येतावन्मात्रस्य दृष्टत्वाच्चेतनाधिष्ठानस्यानुपलब्धेः । सोऽयमाध्यात्मिकस्य प्रतीत्यसमुत्पादस्य हेतूपनिबन्धः ॥ अथ प्रत्ययोपनिबन्धः—पृथिव्यप्तेजोवाय्वाकाशविज्ञानधातूनां समवायाद्भवति कायः । तत्र कायस्य पृथिवीधातुः काठिन्यं निर्वर्तयति । अग्निधातुः स्नेहयति कायम् । तेजोधातुः कायस्याशितपिशिते परिपाचयति । वायुधातुः कायस्य श्वासादि करोति । आकाशधातुः कायस्यान्तःसुखिर्भावं करोति । यस्तु नामरूपाङ्गुरमभिनिर्वर्तयात, पञ्चविज्ञानकार्यसंयुक्तं साम्रवं च मनोविज्ञानं, सोयमुच्यते विज्ञानधातुः । यदा ह्याध्यात्मिकाः पृथिव्यादिधातवो भवन्त्यविकलास्तदा सर्वेषां समवायाद्भवति कायस्योत्पत्तिः । तत्र पृथिव्यादिधातूनां नैवं भवति वयं कायस्य काठिन्यादि निर्वर्तयाम इति, कायस्यापि नैवं भवति ज्ञानमहमेभिः प्रत्ययैरभिनिर्वर्तित इति । अथच पृथिव्यादिधातुभ्योऽचेतनेभ्यश्चेतनान्तरानधिष्ठितेभ्यः कायस्योत्पत्तिः । सोऽयं प्रतीत्यसमुत्पादो दृष्टत्वा नान्यथयितव्यः ॥

The principle underlying the working of this series is just the same, only the terms of the series are different. The terms are twelve in number and are frequently styled "the twelve *nidānas* (root-causes)," viz.—

Past—	{	1. अविद्या, ignorance (blind camel);
		2. संस्कार, latent dispositions (pot-maker);
		3. विज्ञान, rebirth-consciousness (ape);
		4. नामरूप, name and form (ferryman);
		5. षडायतन, six organs of knowledge (mask with holes);
		6. स्पर्श, contact (arrow entering the eye);
		7. वेदना, feeling (<i>mithuna</i>);
Present—	{	8. तृष्णा, craving (drinking man);
		9. उपादान, rooted ideas (gathering flowers);
		10. भव, action or character (pregnant woman);
		11. जाति, birth (child-birth);
Future—	{	12. जरामरणशोकपरिवेदनादुःखदुर्मनस्तता, decay-death-sorrow-lament-suffering-despair.

Any one term of this chain is inevitably caused by the term preceding it, and becomes itself the cause of the term that follows it, No. 12 giving rise to No. 1 and so causing the " Wheel of Law " to go round and round in endless succession. The " Wheel of Law " is an ancient and orthodox idea which has even been preserved in a pictorial form on the Asokan pillars, and at Ajantā and elsewhere (see, Rhys Davids: *American Lectures* pp. 153 ff; the picture-forms are given in brackets above). The chain falls into a three-fold temporal division: Nos. 1, 2 belong to the Past, Nos. 11, 12 to the Future, the intermediate eight to the Present Life, five of these eight representing the passive or receptive side of our life, and the other three the active side of life, or rather that side which is pregnant with the potentiality to produce future results. The chain accordingly is intended to explain the genesis of any one life from out of a series of lives through which one has to

transmigrate. The ignorance of man produces in him certain evil tendencies and dispositions which occasion the false consciousness in the individual that he, a given permanent entity, has now assumed a birth. Other consciousnesses follow, as also other forms of knowledge through the gateways of sense, producing feelings of pleasure or of pain. These leave behind certain tendencies, cravings and dispositions as also certain rotted ideas and bents of character which shape the kind of birth that has to be taken in the succeeding life; and that birth brings in its train all the attendant sorrows and sufferings, escape from which is possible only by following the teaching of the Lord Buddha, which snaps asunder the root-cause of it all, viz. avidyā. — In the Bodhicharyāvatārapañjikā, Parichcheda ix, the following explanation of the terms of the Avidyā-chain is offered—

तत्त्वेऽप्रतिपत्तिर्मिश्याप्रतिपत्तिरज्ञानमविद्या (१) । एवमविद्यायां सत्यां त्रिविधाः संस्कारा अभिनिर्वर्तन्ते—पुण्योपमा, अपुण्योपमा, आनञ्ज्योपमाश्च* । इम उच्यन्ते अविद्याप्रत्ययाः संस्कारा (२) इति । पुण्योपमानां संस्काराणां पुण्योपमेव विज्ञानं भवति, अपुण्योपमानां संस्काराणामपुण्योपमेव विज्ञानं भवति, आनञ्ज्योपमानां संस्काराणामानञ्ज्योपमेव विज्ञानं भवति । इदमुच्यते संस्कारप्रत्ययं विज्ञानं (३) मिति । तदेव विज्ञानप्रत्ययं नामरूपम् (४) । नामरूपविवृद्ध्या षड्विंशत्यतनद्वारैः कृत्यक्रियाः प्रवर्तन्ते । तन्नामरूपप्रत्ययं षड्विंशत्यतन (५) मुच्यते । षड्विंश आद्यतनेभ्यः षट् स्पर्शकायाः प्रवर्तन्ते । अयं षड्विंशत्यतनप्रत्ययः स्पर्श (६) इत्युच्यते । यज्जातीयः स्पर्शो भवति तज्जातीया वेदना प्रवर्तते । इयं स्पर्शप्रत्यया वेदने (७) त्युच्यते । यस्तां वेदयति, विशेषेणास्वादयति, अभिनन्दयति, अध्यवस्यति, अधितिष्ठति सा वेदनाप्रत्यया तृष्णे (८) त्युच्यते । आस्वदना, अभिनन्दना, अध्यवसानं—आत्मप्रियरूपसा (शा) तरूपैर्वियोगो मा [मे] भवत्विति । अपरित्यागो भूयोभूयश्च प्रार्थना । इदं तृष्णाप्रत्ययमुपादानं (९) मित्युच्यते । एवं प्रार्थयमानः पुनर्भवजनकं कर्म ससुत्थापयति, कायेन वाचा मनसा । स उपादानप्रत्ययो भव (१०) इत्युच्यते । तत्कर्मनिर्जातानां पञ्चस्कन्धानामभिनिर्वृत्तिर्या सा भवप्रत्यया जाति (११) रित्युच्यते । यज्जात्यभिनिर्वृत्तानां स्कन्धानामपचयपरिपाकाद्वि-

* आनञ्ज्य or आनिञ्ज्य or आनेञ्ज्य, derived from root निञ्ज् to cleanse or निन्द् to censure, denotes शुभ in the technical sense of निर्वाण.

नाशो भवति, तदिदं जातिप्रत्ययं जरामरण(१२)मित्युच्यते । । तत्र विज्ञानं बीजस्वभावत्वेन हेतुः । कर्म क्षेत्रस्वभावत्वेन हेतुः । अविद्या तृष्णा च क्लेशस्वभावत्वेन हेतुः । कर्मक्लेशा विज्ञानबीजं संजनयन्ति । तत्र कर्म विज्ञानबीजस्य क्षेत्रकार्यं करोति । तृष्णा विज्ञानबीजं स्नेहयति । अविद्या विज्ञानबीजमवकरोति ।विज्ञानबीजं कर्मक्षेत्रप्रतिष्ठितं तृष्णास्नेहाभिभ्यन्दितामविद्यावकीर्णं विरोहाति, नामरूपाङ्कुरस्याभिनिर्वृत्तिर्भवति । स च नामरूपाङ्कुरो न स्वयंकृतो, न परकृतो, नोभयकृतो, नेश्वरनिर्मितो, न कालपरिणामितो, न चैककारणाधीनो, नाप्यहेतुसमुत्पन्नः ॥

Vāchaspatimīśra has a somewhat different explanation to give of these terms. He says—

तत्रैतेष्वेष षट्सु धातुषु या एकसंज्ञा, पिण्डसंज्ञा, नित्यसंज्ञा, सुखसंज्ञा, सत्त्वसंज्ञा, पुद्गलसंज्ञा, मनुष्यसंज्ञा, मातृदुहितृसंज्ञा, अहंकारममकारसंज्ञा, सेयमविद्या (१) संसारानर्थसंभारस्य मूलकारणम् । तस्यामविद्यायां सत्यां संस्काराः (२) रागद्वेषमोहा विषयेषु प्रवर्तन्ते । वस्तुविषया विज्ञप्तिर्विज्ञानम् (३) । विज्ञानाच्चत्वारो रूपिण उपादानस्कन्धास्तन्नाम, तान्युपादाय रूपमभिनिर्वर्तते, तदैकध्यममिसंक्षिप्य नामरूपं (४) निरुच्यते, शरीरस्यैव कललबुद्धदायवस्था । नामरूपसंमिश्रितानीन्द्रियाणि षडायतनम् (५) । नामरूपेन्द्रियाणां त्रयाणां संनिपातः स्पर्शः (६) । स्पर्शाद्वेदना (७) सुखादिका । वेदनाया सत्यां कर्तव्यमेतत् सुखं पुनर्मयेत्यध्यवसानं तृष्णा (८) भवति । तत् उपादानं (९) वाक्याचेष्टा भवति । ततो भवो (१०), भवत्यस्माज्जन्मेति भवो, धर्माधर्मौ । तद्धेतुकः स्कन्धप्रादुर्भावो जातिः (११) जन्म । जन्महेतुका उत्तरे जगमरणादयः (१२) —जातानां स्कन्धानां परिपाको जरा, स्कन्धानां नाशो मरणम्, क्रियमाणस्य मूढस्य साभिषङ्गस्य पुत्रकलत्रादावन्तर्दाहः शोकः, तदुत्थं प्रलपनं हा मातः, हा तात, हां च मे पुत्रकलत्रादीति परिदेवना, पञ्चविज्ञानकार्यसंयुक्तमसाध्वनुभवनं दुःखम्, मानसं च दुःखं दौर्मनस्यम् ॥

The Brahāmāṇṭavarshipī, as also the Brahmadevyābharana, have a still somewhat divergent explanation of the Pratitya-samutpāda chain, which brings the chain within the compass of just one life—

अविद्यादीनामयमर्थः । क्षणिकेषु स्थिरत्वनित्यत्वादिभ्रान्तिरविद्या । सा च विषयेषु रागाद्यात्मकसंस्कारहेतुः । स च संस्कारो गर्भस्यायं गर्भगतशुक्-

शोणितसमुदाये अहमित्याकारकं विज्ञानं जनयति । तस्माच्चालयविज्ञानात् पृथिव्यादिचतुष्टयं शरीरस्य समुदायस्य कारणभूतं जायते । तदेव नामाश्रयत्वा-
न्नामेत्युच्यते । तच्च नाम सितासितादिरूपं तच्छरीरं जनयति । गर्भभूतस्य देहस्य
कललबुद्धदायवस्था नामरूपशब्दार्थ इति पर्यवसन्नम् । पृथिव्यादिचतुष्टयं
नाम रूपं च शरीरं विज्ञानधातुश्चेति षडायतनानि यस्येन्द्रियजातरय तत्
षडायतनम् । षडायतनरूपशरीराकारेण गर्भगतस्यैव परिणाम इत्यर्थः ।
गर्भगतस्यैव शरीरिणः शीतोष्णाद्यनुभवः स्पर्शः । ततः सुखादिका वेदना ।
सुखप्रेप्सा दुःखजिहासा च वृष्णा । तदनुकूलो व्यापार उपादानम् । गर्भाभिर्गमनं
भवः । तथोत्पन्नस्य जनकगतजात्यनुसारेण मनुष्यत्वादिकं जातिः । ततो जरा-
मरणम् । मुमूर्षोरिच्छोपहतिः शोकः । प्रतिहतेच्छस्य प्रलापः परिदेवनम् ।
बाह्येन्द्रियकृतविषयानुभवजनितं दुःखं दुःखम् । मानसविषयानुभवजनितं दुःखं
दुर्मनस्तता । ततः पुनरविद्यादय इति ॥

It may be added that it is not impossible to exhibit considera-
ble points of contact between this twelve-fold series and the
sixteen Padārthas enumerated in the first Nyāyasūtra, which
gives a group of dialectical categories mixed up with another
group of cosmological categories, and the knowledge of which
is believed to conduce to the acquisition of the *summum bonum*.
The theory has certain inevitable drawbacks. Its interpretation
does not seem to have been definitely fixed by tradition; and
the fact that for expressing one and the same concept two
separate words like *samskāra* and *bhava* should have been used
suggests that the whole theory has been the result of a second-
ary working over of an original nucleus. Nor are the terms
of the chain always and invariably related as cause and effect
to one another. Several terms might be shown to be simultane-
ous in origination (e. g., *vedanā* and *trishṇā*) and the series
might at times work backwards (e. g., *trishṇā* and *upādāna*
might lead to *sparsa* and that to increased *trishṇā*, and so on).
Nevertheless, once formulated, the theory has been expounded
and defended with a tenacity truly remarkable.

—Sūtra 19, line 7. — Jacobi (NGGW, 1896, pp. 43 ff; ZDMG,
Vol. LII, pp. 1-15; and elsewhere) has tried to prove that
this chain of twelve *nidānas* as enunciated by the Buddha
is, on ultimate analysis, based upon the Sāṃkhya enumera-
tion of 25 categories. According to the Sāṃkhya, the *Puruṣa*

is by nature "kevala" or in a state of absolute detachment or isolation from all the workings of the saṁsāra, and in the Yogic condition of the "asamprajñāta" or object-less samādhi he tries to regain his real nature. If the samādhi does not always succeed, it is due to the vāsanās of the Yogin, to the latent impressions of his past karman, which disturb the stillness of his samādhi and give scope to the Prakṛiti to resume its fluctuations in which the Puruṣa is readily ensnared. And on the same analogy it might be said that the origination of the manifold processes of the world is also due to the vāsanās or saṁskāras of the Puruṣa. This gives the following parallelism between the Buddhist nidānas and the Sāṁkhya categories—

- Nidāna 1, Avidyā—Corresponds to Sāṁkhya Prakṛiti;
- 2, Saṁskāra—Corresponds to Sāṁkhya Mahat, which is the starting point of the series of *phenomenal* fluctuations;
- 3, Vijñāna—Corresponds to Sāṁkhya Buddhi, the starting point of the series of *mental* fluctuations;
- 4, Nāma-rūpa—Corresponds to Sāṁkhya Ahankāra, the principle of subjectivation or individualisation;
- 5, Śaḍāyatana—Corresponds to Sāṁkhya elevenfold (i. e., six indriyāyatana working upon six viśayāyatana) indriyas + pentad of Tanmātras; the karmendriyas are not counted in the Buddhistic system; the Tanmātras correspond to the viśayas, especially when it is remembered that the older* enumeration substituted viśeṣas for the Tanmātras;
- 6, Sparśa—Corresponds probably to the Karmendriyas;
- 7 to 12—Contain nothing that need be objected to by any system of philosophy.

* That is, according to Jacobi, belonging to a time when the Sāṁkhya had yet to develop (or assimilate) the "Guṇa" theory. Guṇas correspond to the "dharma" of the Buddhist theory.

Jacobi does not of course wish to suggest that the Buddhist "pratītyasamutpāda" is a slavish copy of the Sāṅkhya theory of cosmic evolution. But there appears to be sufficient conceptual parallelism between the two. There is thus some point in the remark that the terms of the Pratītyasamutpāda series contain no factor not already recognised by most systems. It is the mode of relation between the terms that differs from system to system.

—Sūtra 19, line 9. — The words "utpattimātranimittatvāt" of the sūtrapāṭha are changed to "saṃghātabhāvānimittatvāt" by Rāmānuja, Nimbārka, Bhāskara and Śrīkaṇṭha. The changed reading makes explicit what was implicit. It is thus a simpler reading and is likely to have been a deliberate change from the original *lectio difficilior* as Śaṅkarācārya gives it.

—Sūtra 19, line 12. — See Sūtra 20, line 1-2. Śaṅkarācārya's point here is that even though one of the terms of this series be credited with the power of producing the next term, how did the series *as a whole* and in a given fixed sequence come to be fashioned? Moreover the causal phenomenon as conceived by the Buddhists requires a number of "pratyayas" to simultaneously co-operate to produce a given result. Who calls these pratyayas to be present punctually at the time of origination; and if their simultaneous presence at a given place and in a given moment be a mere undesigned accident why should they, being accidentally thrown together, necessarily help in the production of the joint result? Cannot one of the causal factors be permitted to say, after all I came here by chance: I see others working: I need not necessarily co-operate? And if it be said that, being present, they cannot but co-operate, that being their inborn nature, what are we in all soberness to think of a series of agents not one of whom really cares for his predecessor or his successor, and yet they all, as a series and almost in spite of themselves, seem to be uniting, as if ordained by Providence or pre-established harmony, to produce a joint and complicated artifact? Bhāmati lays the finger accurately on the weakest spot in the argument when it says—

यत् खलु हेतूपनिबद्धं कार्यं तदन्यानपेक्षं हेतुमात्राधीनोत्पादत्वादुत्पद्यतां
नाम । पञ्चस्कन्धमुदायस्तु प्रत्ययोपनिबद्धो न हेतुमात्राधीनोत्पत्तिः, अपितु

नानाहेतुसमवधानजन्मा । नच चेतनमन्तरेणान्यः संनिधापयितास्ति कारणा-
नामित्युक्तम् ॥ । स्यादेतत् । अनपेक्षा एवान्त्यक्षणप्राप्ताः क्षित्यादयोऽ-
ङ्गुमारभन्ते, तेषां तूपसर्पणप्रत्ययवशात् परस्परसमवधानम् । न चैकस्मादेव
कारणात् कार्यसिद्धेः किमन्यैः कारणैरिति वाच्यम् । कारणचक्रानन्तरं
कार्योत्पादात् सिद्धमित्येव नास्ति । न चैकोपि तत्कारणसमर्थ इत्यन्य उदासत
इति युक्तम् । नहि ते प्रेक्षावन्तो येनैवमालोचयेयुरस्मासु समर्थ एकोपि कार्यं
इति कृतं नः संनिधिनेति । ॥ तत्र । यद्यन्तक्षणप्राप्ता अनपेक्षा
स्वकार्योपजनने, हन्तानेन क्रमेण ततः पूर्वं ततः पूर्वं सर्व एवानपेक्षास्तत्तत्स्व-
कार्योपजनन इति... .. कुसूल (granary) निहितवर्ज एव स्यात् कृती
कृषीवलः, कृतमस्य दुःखबहुलेन कृषिकर्मणा । तस्मात् परस्परापेक्षा एवान्त्या
वा मत्स्या वा पूर्वं वा क्षणाः कार्योपजनन इति वक्तव्यम् ॥

—Sūtra 19, line 13. — The point of the Buddhist opponent is this: We see the series actually in operation, one member of it originating another in succession; and we do not know of a someone or a something independent of the series that works the wheel of the series. Because *we* cannot understand how the series can go on working without the presence of an independent operator, that does not mean that the series does not work at all; for, "Na hi dṛiṣṭe 'nupapanam nāma." We must necessarily assume that the series does function although there be no assignable *deus ex machina*. To this argument on the ground of "ākshepa" Vāchaspati-miśra makes the following reply—

किमाक्षेप उत्पादनम् आहो ज्ञापनम् । तत्र न तावत् कारणमन्यथानुप-
पद्यमानं कार्यमुत्पादयति, किंतु स्वसामर्थ्येन । तस्माज्ज्ञापनं व्यक्तव्यम् । तथाच
ज्ञापितस्यान्यदुत्पादकं वक्तव्यम् । तच्च स्थिरपक्षेऽपि सत्यापि च भोक्तव्यविश्रा-
तारं चेतनमन्तरेण न संभवति, किमङ्ग पुनः क्षणिकेषु भावेषु । भावतुर्मोगेनापि
कदाचिदाक्षिप्येत संघातः, स तु भोक्तापि नास्तीति दूरोत्सारितत्वं दर्शयति —
भोक्त्रहितोष्घिति ।

—Sūtra 19, line 16. — The reference is to II. ii. 12, lines 25-34. There is involved here a rather difficult question of fixing the text of the bhāṣhya and its probable interpretation. In the text as printed in all the editions, the epithet "āśrayāśrayibhūteshu" can agree with "bhoktrishu," while its converse in the next

line “āśrayāśrayiśūnyeshu” must go with “aṇushu.” This seems a *prima facie* inconsistency, and to avoid it the Brahma-vidyābharāṇa, Advaitānanda’s commentary on the Śāṅkara-bhāṣya, says—

नित्येष्वश्रयाश्रयिभूतेष्वणुष्वभ्युपगम्यमानेषु, भोक्तृषु च सत्स्वित्यन्वयः ।

The construction is not natural : the position of the conjunction “cha” practically rules it out. Assuming then that the first epithet qualifies “bhoktrīshu,” as the Ratnaprabhā and Ānandagiri in fact definitely assert, what meaning can we give to it? The commentators render the term by “adṛiṣṭāśrayeshu,” probably taking “āśraya” = “adṛiṣṭa,” the bhoktrī being regarded as the “āśrayin” with reference to it. This way of interpretation is questionable. The bhoktrī or soul is the āśraya or ādhāra of the adṛiṣṭa, which is the āśrayin. If, ignoring the “dūrānvaya,” we construe the passage with the Brahmavidyābharāṇa, the aṇus could properly be called the āśrayins of the soul who is the āśraya; but āśraya of what? Not of the atoms, but of the adṛiṣṭa which, in that mode of construing the passage, has to be supplied. The term “āśrayāśrayibhūteshu” is also rendered by “upakāryōpakārakabhūteshu.” As the Brahmavidyābharāṇa explains—

यदन्वये परमाणूनां संघातोत्पत्तिर्यद्व्यतिरेके च न, तदुपकारकम्, उप-
कार्याः परमाणवः ।

The upakārakas would in this case be the bhoktrīs in so far as they are under the influence of adṛiṣṭa. But even this interpretation is not quite satisfactory, because “upakāryōpakārakabhāva” has to be predicated, in the first half of the sentence, of the souls, and is to be denied, in the latter half, of the atoms. As all the editions gave the same reading, it was necessary to consult Mss. Only three out of the nearly 15 Mss. consulted gave a variant for “āśrayāśrayibhūteshu.” The Ms. No. 197 of the Viśrāmabāg collection read, for the word “āśrayāśrayibhūteshu” the suggestive reading of “āśayaśrayabhūteshu.” This reading was confirmed by another Ānandāśrama Ms., while a third Ms. from the same library reads “āśrayāśrayabhūteshu” which, although in itself meaningless, points to an even better reading. Now āśaya is, as explained in our note to II. ii. 18, line 18, a Buddhist technical term for “stream of conscious-

ness," and there is a point in Śāṅkarācārya's using a technical term of the Buddhistic philosophy while expounding the Vaiśeṣhika system to a Buddhist opponent. See below (p. 145), Note to II. ii. 25^{27ff.}. "Āśaya" is synonymous with "antaḥ-karaṇa" or the mind; but what we expect in the present context is a Buddhistic synonym for "adriṣṭa." Such a synonym is *āsrava*: compare line 15 of the extract from the Bhāmati quoted by us on page 129 before: *sāsravaṁ cha manovijñānam*. Vasubandhu divides "dharma" into "*sāsrava*" and "*anāsrava*," the first group being explained in the Abhidharmakośavyākhyā (p. 13) as—

अथास्रवाणां य आश्रयास्ते सास्रवाः ।

Especially in view of the senseless reading "*āśrayāśraya-bhūteshu*" we are justified in concluding that the original reading was "*āsravāśrayabhūteshu*" which gives an excellent sense, while changing "sra" to "śra" and substituting "yā" for "vā" under the influence of the following "*āśrayāśrayi*" (line 17-18) are by no means unusual scribal errors.

—*Sūtra 19, line 17.* — Ratnaprabhā and Anandagiri say that "*āśrayāśrayiśūnyeshu*" is a variant reading—

आश्रयाश्रयिःशून्येऽविति पाठे उपकार्योपकारकत्वशून्येऽवित्यर्थः ।

From this one would expect that editors of these commentaries would give in the bhāshya the reading which the commentators accept as original and explain. The editors fail us here, all alike adopting the reading "*āśrayāśrayiśūnyeshu*." Ratnaprabhā explains the original reading by—

आश्रयाश्रयः संघातकर्ता तच्छून्येऽवित्यर्थः ।

Probably the true reading here too should be—

आस्रवाश्रयः संघातकर्ता तच्छून्येऽवित्यर्थः ।

and careful Mss. of Ratnaprabhā would, probably, confirm it. At the same time, however, the reading mentioned as a *pāṭhāntara* by the commentators is likely to be the original reading in line 17-18. Bhāmati knows only the reading "*āśrayāśrayiśūnyeshu*," explaining it by "*upakāryōpākarakabhāvasūnyeshu*," and as an attribute to the atoms it gives a good sense. The con-

fusion between “āsravāśrayabhūteshu” and “āśrayāśrayi-sūnyeshu” in two contiguous clauses of opposed tenor is very easily explicable.

—Sūtra 19, line 23. — The term “pudgala” is thus explained—

पूर्यते गलति चेति पुद्गलो देहः ।

It means any mass of matter which is capable of an accretion and a depletion of parts.

—Sūtra 19, line 25. — The Buddhists accepted wholesale the doctrine of karman and of the transmigration of the individual. They speak of the anterior births of the Buddha (compare the “Jātaka” stories), and have developed the doctrine of the Bodhisattvas, who are to be Buddhas in a subsequent life. These assumptions of theirs would be meaningless if there be no identical personality enduring through the successive lives and passing through a variety of experiences consistently with its karman. And of course mind or Āśaya or Ālayavijñāna cannot take the place of that enduring personality, because, according to the hypothesis, mind itself is changing every moment. And to argue that though a new mind arises every moment, each succeeding mind preserves the main features of its predecessor intact, is practically to concede the existence of something that does endure; and then it would be only “nāmanātre vivādaḥ” or a fight for mere words.

—Sūtra 19, line 28ff. — The following dialogue between a Buddhist Bhikṣu and a Jain Kaṣapaṇaka as given in the Prabodhachandrodaya (Act III) will be found to have precisely hit the point of Śaṅkarācārya’s contention—

क्षपणकः । भण दाव क्खणविण्णासिणा तुए कस्स किदे वदं धालिअदि ।

भिक्षुः । अरे श्रूयताम् । अस्मत्संततौ पतितः कश्चिद्विज्ञानलक्षणः समुच्छिन्न-वासनो मोक्ष्यते ।

क्षपणकः । अले मुक्ख । जइ कस्सिं वि मण्णन्तले कोवि मुक्को भविस्सदि तद्वा दे संपदं पणहस्स किदे केलिं उवआलं कलिस्सदि ।

—Sūtra 20, line 1ff. — Ratnaprabhā brings out the relation between the present and the preceding sūtra as follows—

द्विविधो हि कार्यसमुत्पादः सुगतसंमतो, हेत्वधीनः कारणसमुदायाधीनश्च ।
तत्राविद्यातः संस्कारस्ततो विज्ञानमित्येवंरूपः प्रथमः, पृथिव्यादिसमुदायात्
काय इत्येवं द्वितीयः । तत्रायमङ्गीकृत्य द्वितीयः संघातकर्त्रभावेन दूषितः ।
संप्रत्याद्यं दूषयति सूत्रकारः—उत्तरेति ॥

—Sūtra 20, line 5. — If the "Nirodha," the Buddhist technical term for "vināśa" or destruction, were a process occupying an appreciable time, then "Nirudhyamānata" would imply the beginning of the process while "Niruddhata" would denote its conclusion. Since, however, the process is a mere momentary event, we cannot distinguish between its beginning and end, both being alike evanescent. This exact distinction between "Nirudhyamāna" and "Niruddha," is thus brought out by the Brahmavidyābharāṇa—

उत्तरक्षणोत्पत्तिकाल एव यस्याव्यवहितपूर्वक्षणस्य नाशः स निरुध्यमानः ।
पूर्वमेव नष्टो निरुद्धः ।

—Sūtra 20, line 9. — A thing comes into existence as a *kārya* of its predecessor in the series, and it passes out of existence as the *kāraṇa* of its successor. Now, the "*kārya*" nature of a thing must be distinguished from its "*kāraṇa*" nature: the one must be transformed into the other, such transformation being regarded as the life-purpose of the thing. Thus there result the three instants in the life of a thing: its origination as *kārya*, its transformation into the *kāraṇa*, and its passing away after causing the origination of the next member of the series. This implies duration for *three* moments or "*trikṣaṇasthāyitva*" at the very least, which it is the Vaiśeṣikas and not the Buddhists who admit. We, however, know from other sources that the Sarvāstivādins actually believed in this doctrine of limited permanence. "The substratum of everything" they asserted, "is eternal and permanent. What changes every moment is merely the phase of the thing." But it seems evident nevertheless that the Brahmasūtras did not know of this doctrine, which makes the position a close approach to the Jain view of the matter. It must therefore have been a subsequent development. Besides, we have to remember that the Sarvāstivādins were divided into a number of schools with varying shades of opinions; and it is not unlikely that the

school from which the author of the *Brahmasūtras* derived his information was different from the one the tenets of which are generally accepted as the orthodox *Sarvāstivāda* philosophy. It is quite unbelievable that, *Bādarāyaṇa* or *Śaṅkara* should have deliberately perverted the doctrine on such vital issues. It may also be noted in passing that in accepting the doctrine of "pariṇāminityatva" or the noumenal permanence, the *Sarvāstivādins* have departed from the original teaching of the Buddha, which, in this respect, would seem to have been more faithfully preserved by the *Vijñāna*- and the *Śūnya*-vādins.

—*Sūtra* 21, line 3.—The four *pratyayas* are thus enunciated by *Nāgārjuna* (*Madhyamaka-Kārikās*, i. 2)—

चत्वारः प्रत्यया हेतुश्चालम्बनमनन्तरम् ।

तथेवाधिपतेयं च प्रत्ययो नास्ति पञ्चमः ॥

and are explained by the commentators as follows :—

आलम्बनप्रत्ययः, समनन्तरप्रत्ययः, अधिपतिप्रत्ययः, सहकारिप्रत्ययश्चेति चतुर्विधा हेतवः । तत्रालम्बनप्रत्ययो विषयः, यथा नीलविज्ञानस्य नीलवस्तु । समनन्तरप्रत्ययः पूर्वज्ञानम्, बौद्धमते हि क्षणिकज्ञानसंततो पूर्वज्ञानमुत्तरज्ञानस्य कारणम्, तदेव च मन इत्युच्यते । अधिपतिरिन्द्रियं चक्षुरादिरूपम् । सहकारिप्रत्ययश्चालोकः ॥ तत्रालम्बनप्रत्ययस्य ज्ञानसमकालत्वमपेक्षितम्, हेतुतया च तत्पूर्ववर्तित्वम् । समनन्तरप्रत्ययेन संस्काररूपेण ज्ञानस्य बाधरूपता जायते । अधिपतिप्रत्ययो ज्ञानस्य रूपादिविषयतां नियच्छति । सहकारिप्रत्ययाच्च ज्ञानस्य स्पष्टता जायते ॥

This theory lays down that, for any intellectual or emotional event, the simultaneous co-operation of a number of factors is required. The object has to endure throughout the process of cognition and even prior to it if not also subsequent to it ; and the same holds true of the sense-organ and of the light, if not also of the past impressions, which enter so largely into the constitution of any present cognition. If, therefore, it were to be urged that the *hetu* (*niruddha-kṣaṇa*) need not exist at the same time as the effect (*asati hetau, kāryakāle iti śeṣaḥ*—*Brahmavidyābhaṇa*) that would not be consistent with the doctrine of the four-fold *pratyayas* as giving rise to all the varied phenomena of our mental and emotional life. *Chittam* = *jñānam* ; *Chaittaḥ* = *sukhādayaḥ*.

—Sūtra 21, line 6. — The word “saṁskāra” (Pāli, saṁkhāra = composite things) is the Buddhist synonym for Padārtha or Bhāva or Dharma. “Sarvaṁ kṣaṇikam” is one of the three cardinal tenets of Buddhism, and the last words of Gotama Buddha—“Vayadhammā saṁkhārā : appamādena sampādehā ti (All composite or ‘confected’ things are liable to mutation. Achieve it then with heedfulness)” revert to the same dogma. Compare—

आद्यन्तवन्तो भावाः संस्काराः, संस्क्रियन्ते समुत्पद्यन्ते इति व्युत्पत्त्या ।

An attempt to escape from the evident intention of these words is to lay particular stress upon ‘saṁkhārā.’ It is saṁskṛita things, which arise out of the compounding or mingling together of constituents, that alone are transitory. The “asaṁskṛita” things are permanent. And then the question arises as to whether there are any positive asaṁskṛita things that can be named. This leaves the door open for later theorists who, as we shall presently see, made even the “Śūnya” of the Mādhyamika philosophers a real positive existence. But whether the Buddha intended to teach the doctrine of noumenal permanence may seriously be doubted. He was at any rate most cautious in his expression, and certain direct questions about transphenomenal problems he straightway refused to answer (avyākṛita).

—Sūtra 22, line 1ff. — The words “buddhibodhyam” etc. look like a quotation, but it cannot be traced. The Abhidharmakosa gives a Kārikā which agrees in sense, viz.--

अनास्रवा मार्गसत्यं त्रिविधं चाप्यसंस्कृतम् ।

The implication is that the three are not buddhi-bodhya, saṁskṛita, and kṣaṇika, i. e., they are permanent self-subsistent entities the nature of which passes our comprehension. The Pratisaṁkhyā-nirodha is thus explained--

संख्या बुद्धिः, प्रतिकूला संख्या प्रतिसंख्या, घटं नाशयामीति बुद्ध्या
दण्डायुद्यम्य क्रियमाणो नटनाशः प्रतिसंख्यानिरोधः ।

The deliberate sublation not only of one or more objects but, through Right Knowledge, of the entire saṁsāra, with all its

attendant kleśas, is, as Śaṅkarācārya says, a case of this Nirodha. The Apratisamkhyā-nirodha is thus explained—

स्वरसम्पुत्राणां स्तम्भादीनां प्रतिक्षणं जायमानः सूक्ष्मः अकुशलैरवगन्तु-
मशक्यो विनाशः अप्रतिसंख्यानिरोधः ।

Examples of this are the day-to-day friction with the wind etc. which causes new and rough surfaces of stone or wood to become smooth, and all such gradual though imperceptible operations of natural forces. A case of such an Apratisamkhyā-nirodha would be the disappearance into the limbo of the Past of all those moments or momentary phenomena which we might have observed but did not observe through reasons such as absent-mindedness. "Such an unrealised possibility of the perception of the dharmas, passing from the future stage of 'will be perceived' into the past stage of 'were not perceived' without touching the present stage of 'being perceived' by one whose attention was otherwise engrossed, is an example of Apratisamkhyā-nirodha." What are in reality only two special cases of Pratisamkhyā and Apratisamkhyā Nirodhas have often been regarded as the only possible cases of them, as when Vasubandhu tells us that "the true characteristic of Pratisamkhyā-nirodha is deliverance from bondage. It is the *dharma* par excellence amongst all the *dharmas* the supreme goal amongst goals, the highest of all things, the noblest of all reasons, the greatest of all achievements." It is, in other words, synonymous with Nirvāṇa, being the extirpation of the kleśas by means of knowledge, or more precisely speaking, their transmutation into Bodhi. Compare the well-known, but ungrammatically expressed, dictum—

यः क्लेशः तद्बोधि, यत् संसारं तन्निर्वाणम् ।

Śaṅkarācārya seems, on this point, to be truer—or at any rate nearer—the original form of the doctrine of the Nirodhas than some of the later writers of the Sarvāstivāda school.

—Sūtra 22, line 3. — That the three are "avastu" or immaterial (not however unreal) follows from the fact that according to the Buddhist philosophy, "saṃkhāras" alone are material, while these three are classed as "asaṃskṛita-dharmas." See the table on page 120, before. That they are "abhāvamātra"

probably implies that they are incapable of giving birth to other evanescent dharmas, as is the case with all other momentary existences. By the epithet "nirupākhyā" Śāṅkarācārya probably refers to their indescribability. Ratnaprabhā renders the word by 'nisśvarūpa.' Yamakami Sōgen suggests that Śāṅkara's 'nirupākhyā' is a mistake for 'nirūpākhyā,' rūpa being the Sarvāstivāda synonym for matter. But then, what is the distinction between avastu and nirūpākhyā? In view of the fact that one of the Nirodhas can be identified with Nirvāṇa, the undefined and undefinable *sumum bonum* of the Buddhists, we think that Śāṅkarācārya is correct in his use and interpretation of the epithet in question.

—Sūtra 22, line 8ff. —Śāṅkarācārya's point is this. If, according to the doctrine of the momentariness of things, everything is coming into existence and at once passing out of existence, ushering in, as it disappears, another thing which is to repeat the same process, what is the need and purpose of a special "nirodha" with its two sub-divisions? This nirodha must achieve a destruction other than what overtakes the things every moment. If the whole pillar, for instance, is being destroyed and re-created moment after moment, what is the point in telling us that the edges of the pillar are slowly becoming smooth and glossy? The new series of pillars with smoothened edges, *ex hypothesi*, have nothing to do with the old series, and so it is immaterial whether one of these pillars happens to be more smooth than the other, assuming for the moment that we can make such a comparison. Let us then imagine that the function of the nirodha consists in inhibiting the production of a new momentary existence from the preceding momentary existence. If now the preceding momentary existence is in this way unable to originate the following momentary existence, it is as good as non-existence, because existence to the Buddhists means functioning. Compare the stanza ascribed in the Bodhicaryāvatārapañjikā (ix. 6) to the Buddha himself—

क्षणिकाः सर्वसंस्कारा अस्थिराणां कुतः क्रिया ।

भूतिर्येषां क्रिया सैव कारकं सैव चोच्यते ॥

And if the preceding momentary existence is non-existing, that argues for the non-existence of all the preceding series of

momentary existences, so that with the snapping away of the last link in the chain of "saṃtāna" the whole chain falls to pieces, which however must be regarded as an untoward contingency. Compare the Ratnaprabhā—

संतानो नाम भावानां हेतुफलभावेन प्रवाहः । तस्मिन् संताने चरमक्षणः
क्षणान्तरं करोति वा न वा । आद्ये चरमत्वव्याघातः, संतानाविच्छेदात् ।
द्वितीये चरमस्यासत्त्वप्रसङ्गः, अर्थक्रियाकारित्वं सत्त्वमिति त्वत्सिद्धान्तात् ।
चरमस्यासत्त्वे पूर्वेषामप्यसत्त्वप्रसङ्गः, अर्थक्रियाशून्यत्वात् । अनेन क्रमेणासन्तः
सर्व एव संतानिन इति कस्य निरोधः ॥

Consequently the "nirodha" can neither be applicable to the series viewed as a whole, nor as producing its sublative effect upon a given solitary member in the series.— And even ignoring the doctrine of the series of momentary existences, the question remains whether anything (whether momentary or otherwise) can at all disappear leaving absolutely no trace of it behind, as the doctrine of "Nirodha" requires us to assume. As the Gītā says (ii. 16)—

नासतो विद्यते भावो नाभावो विद्यते सतः ।

Finally, the special case of Apratisaṃkhyā-nirodha, as Vasubandhu explains it, can also be refuted by the same argument as above. For, even if we do not raise the ultimate issues such as "who or what it is that can ignore the things before it, and remain engrossed by something else," it is still pertinent to ask—If things are to pass away whether anyone looks at them or not, why make a special case of things that translate themselves from the Future into the Past without touching the border of the conscious Present? The special case of the Pratisaṃkhyā-nirodha, viz. nirvāṇa, is taken up in the next sūtra.

—Sūtra 22, line 12f.—Compare the Bhāmati—

स्यादेतत् । ततोपलतलपतितनष्टस्य तूद्विन्दोः किमस्ति रूपमन्वयि प्रत्यभि-
ज्ञायमानं येनास्य न निरन्वयो नाशः स्यादिति चेत्, शक्यं तत्र वक्तुम्—

उद्विन्दौ च सिन्धौ च तोयभावो न भिद्यते ।

विनष्टेऽपि ततो विन्दावस्ति तस्यान्वयोऽम्बुधौ ॥

[तत्रोभयत्र तोयत्वसामान्यं न भिद्यत इत्यर्थः ।

—Sūtra 22, line 13.—The word “avichchhedāt” from the sūtra is interpreted in two different ways in the Bhāshya: (i) because of the non-interruption of the Series; (ii) because of the absence of absolute distinctness (vichchheda) between what goes away (ghaṭa) and what takes its place (mṛttikā).

—Sūtra 23, line 1.—Bhāskarāchārya apparently did not read our sūtra 23. An identically worded sūtra occurs (no. 16) in the Vaiśeṣhika refutation. The Bhāshyakāras who do read it, interpret it very differently—

शंकर, वल्लभ, } —सम्यग्ज्ञानाद्वा, स्वयमेव वा, जायमाने प्रतिसंख्या-
श्रीनिवास } निरोधे दोषप्रसङ्गः ।

रामानुज, } —तुच्छाज्जगदुत्पत्तौ, जगतश्च तुच्छतापत्तौ, दोषप्रसङ्गः ।
श्रीकण्ठ }

निम्बार्क—संतानस्य संतानिव्यतिरिक्तवस्तुत्वाभावात्, संतानिनां च क्षणिक-
त्वात्, प्रतिसंख्यानिरोधाख्यो मोक्षोऽनुपपन्नः ।

विज्ञानभिश्च—निरोधद्वयानङ्गीकारे मोक्षानुपपत्तिः, अङ्गीकारे कार्यकारण-
प्रवाहभङ्गः, इत्युभयथापि दोषः ।

मध्व—कारणे सति कार्यं भवत्येवेति नियमपक्षे, तदभावपक्षे च दोषः ।

Most of the commentators are either too brief or very unsatisfactory in their explanation of the “ubhayathā-dosha.” In connection with this it is to be noted that certain editions (particularly the one on which Deussen's German translation is based) read in line one—

प्रतिसंख्याप्रतिसंख्यानिरोधान्तःपाती

in place of—

प्रतिसंख्यानिरोधान्तःपाती

which is probably a dittography under the influence of the wording of sūtra 22. The reading is clearly wrong.

—Sūtra 23, line 2f.—Śaṅkarāchārya's words leave no doubt that he attributes to his opponents the view that things perish automatically and without a cause. It is difficult to understand what exactly Śaṅkarāchārya has in his mind. The doctrine of Momentariness implies that things originate and perish

in one moment, or at any rate originate in one moment and perish in the next moment. Compare *Nyāyamañjarī*, p. 447—

सर्वदा कार्यानुत्पादात् कारकावस्था नूनमेकक्षणस्थायिनी भावानामभ्युपगन्तव्या ।

But this destruction of things moment after moment cannot be the “*nirhetuka-vināśa-abhyupagama*” that Śāṅkarācārya here alludes to. For, according to the doctrine, just as the preceding moment in the series is regarded as the cause of the origin of the succeeding moment, even so, the succeeding moment can well be regarded as the cause of the destruction of the preceding moment, so that there is no *Nirhetuka vināśa*. To quote the *Nyāyamañjarī* again—

तस्मात् सिद्धं यत् कारकं यच्च सत् तत् क्षणिकमिति । अतश्च क्षणभङ्गिनो
भावाः प्रलयं प्रति हेतुनिरपेक्षत्वात् ।

As another explanation, we might begin by distinguishing between the normal destruction of momentary existences within the chain of causation and the destruction of the chain as a whole, which last takes place only at the time of *Nirvāṇa*. Now, the “*Pratisaṅkhyā*” or the True Knowledge which is to effect the cessation of the *Avidyā* chain must be supposed to be outside the chain; otherwise it cannot destroy the chain. But according to the Buddhist hypothesis all existing things are comprised within the chain. The “*Pratisaṅkhyā*” must therefore be out of the sphere of existence or, in other words, non-existent. Destruction by a mere non-existence is not possible; for, as Vallabha observes—

नहि वन्त्यापुत्रेण रज्जुसर्पो नाश्यते ।

But this does not explain how the Buddhists would be compelled to give up their *assumption*, as Śāṅkarācārya asserts. It may be noted that Vallabhācārya does not refer to any Buddhist assumption of the kind at all. —The *Brahmavidyā-bhāraṇa* has another way of explaining the difficulty. It seems to say that although there may not be an actual *abhyupagama* of the kind on the part of the *Sarvāstivādins*, they ought to have, consistently with their theory, made that *abhyupagama*. And assuming that they do make the *abhyupagama* to which they are logically driven, Śāṅkarācārya, we are assured, shows that they will be compelled to abandon that *abhyupagama*. One

should have thought that an *abhyupagama* to which they were driven they would most gladly surrender, if need be. The words of the *Brahmavidyābharṇa* are—

यद्यप्यप्रतिसंख्यानिरोध एव निर्हेतुकः परेणोपेयते, प्रतिसंख्यानिरोधस्तु
तत्तत्कारणविशेषायत एव, तथापि मुमुक्षोः साधकस्य क्षणिकृतया मोक्षकालेऽ-
वस्थानासंभवेन साधने प्रवृत्त्ययोगात् परेणाविद्यायाः प्रतिसंख्यानिरोधोपि निर्हेतुक
एवोपेय इत्यापाय इदं दूषणं द्रष्टव्यम् ॥

The explanation given is not accordingly quite satisfactory.—The other commentators are all tantalisingly silent on the point. Sōgen therefore asserts, “Śāṅkara is here guilty of a grave misrepresentation,” inasmuch as the doctrine of “*nirhetukavināśa*” or causeless destruction is absolutely unknown in Buddhism, which has always maintained that nothing can ever happen without adequate causes and conditions. We rather think that Śāṅkarācārya has here in mind some Buddhist doctrine which holds that the *Nirvāṇa* or cessation of *kleśas* is something which everyone is going to achieve one day or the other. We have fallen into the stream and are sure one day to reach the ocean. Every man is potentially the Buddha. The *primitive* Buddhist view regarded the *Nirvāṇa* as a thing to be attained by deliberate and sustained effort in a particular direction. The *later* view, which cannot have been unknown to Āśvaghosha, and which is implied in the following quotation from the *Milinda-pañha* (p. 268-69) makes the *Nirvāṇa* the inevitable birth-right of all; it is not born of *karman*, and can therefore be called *nirhetuka*—

निब्बानं महाराज अकम्मजं अहेतुजं अनुतुजं ॥ । मा भन्ते
नागसेन जिनवचनं मरुत्सेहि, मा अजानित्वा पठ्हे व्याकरोहीति । ।
अनेकसतेहि पन भन्ते नागसेन कारणोहि भगवता सावकानं निब्बानस्स
सच्छिकिरियाय मग्गो अरुत्तातो, अथ च पन त्वं एवं वदसि—अहेतुजं
निब्बानं ति ॥ । एवमेव खो महाराज, सक्का निब्बानस्स
सच्छिकिरियाय मग्गो अवत्तातुं, न सक्का निब्बानस्स उप्पादाय हेतु
दस्सेतुं । । असंखतं निब्बानं, न केहिचि कतं । निब्बानं महाराज
न वत्तब्बं उत्पन्नं ति वा, अनुप्पन्नं ति वा, उप्पादनियं ति वा, अतीतं ति वा,

अनागतं ति वा, पच्चुप्पन्नं ति वा, चक्खुविज्जेय्यं ति वा, सोतविज्जेय्यं
ति वा, कायविज्जेय्यं ति वा ॥

This is inconsistent; and Śāṅkarācārya is bringing home to the Buddhist, in the very words of King Milinda or Menander, this inherent incompatibility of the doctrine of Nirvāṇa by following the Noble Eight-fold Path with the doctrine that the Nirvāṇa is *nirhetuka*. This doctrine, it may be noted in passing, is analogous to the Vedāntic doctrine that the moksha is neither utpādyā, nor vikāryā, nor prāpyā, nor saṃskāryā (see Śāṅkarabhāṣhya on I. i. 4). There is thus no "grave misrepresentation" on the part of Śāṅkara, but grave ignorance on the part of those who accuse him of it in this particular case.

—Sūtra 23, line 4. —The "mārga" is the "Noble Eight-fold Path," or "Ariyo Aṭṭhaṅgiko Maggo." It consists of (1) Samyag-drishti, (2) Samyak-saṃkalpa, (3) Samyag-vāc, (4) Samyak-karmānta, (5) Samyag-ājīva, (6) Samyag-vyāyāma, (7) Samyak-smṛiti, and (8) Samyak-samādhi. Of these eight, Samyag-drishti consists in mastering the four Noble Truths or "ariyasachchāni," viz., dukkham, dukkhasamudayo, dukkhanirodho, and dukkhanirodhagaminī patipadā. For details of the other terms see Dighanikāya, xxii. 18–21.

—Sūtra 24, line 2. —In the two preceding sūtras Śāṅkara has indeed not proved that the two nirodhas are not "nirupākhyā," that is, that they are "sopākhyā;" all that he has proved is that the nirodhas are as such impossible: they are not avastu, abhāvarūpa, etc., as postulated; but what they are he has not exactly said, although perhaps we can say that they are, if anything, just the opposites of these in nature. He now wants to prove that the "ākāśa" is also a bhāvarūpa-vastu.

—Sūtra 24, line 7. —The syllogism to prove the existence of the ākāśa as a distinct dravya is thus stated—

(i) शब्दो विशेषगुणः, चक्षुर्यद्गणायाम्यबहिरिन्द्रियग्राह्यजातिमत्त्वात्,
स्पर्शवत् ।

This proves that śabda is a guṇa.

(ii) शब्दो द्रव्यसमवेतः, गुणत्वात्, संयोगवत् ।

This proves that śabda must reside upon some dravya.

(iii) शब्दः पृथिव्याद्यष्टद्रव्यातिरिक्तद्रव्याश्रितः अपद्रव्यानाश्रितत्वे सति समवायकारणवत्त्वात् । यन्नैवम् तन्नैवम्, यथा रूपम् ॥

This proof by the method of exhaustion establishes the existence of the ākāśa as a distinct dravya.

—Sūtra 24, line 8. —The Abhidharmakośa-sāstra of Vasubandhu has the following description of ākāśa—

“Freedom from obstruction is the sole characteristic of ākāśa and it is owing to this characteristic that the activity of material things is rendered possible.”

The bird in the cage has its flight obstructed and so it cannot soar into the open ākāśa. The nature of ākāśa is, not to obstruct the flight in any direction whatsoever. This gives the ākāśa the character of an infinite all-pervading entity. And it is avastu because it is immaterial. It obstructs nothing and cannot itself be obstructed by anything.

—Sūtra 24, line 11. —Śaṅkara's argument is subtle, but quite cogent. The absence of a ghāṭa in the room comes to an end by somebody bringing in the ghāṭa. The absence of a white crow in the world can similarly be destroyed by the chance discovery of such a species, say, in the polar region. Howsoever widespread the absence might be, it is liable to be destroyed by one contrary instance. Now ākāśa is “āvaranābhāvamātram,” and if one āvarana exists anywhere, e. g., the cage of the bird, or even the presence of one flying bird overhead, āvaranābhāva must come to an end. In the case of the ghāṭa in the room destroying the ghāṭābhāva in that room (but not in any other room), we distinguish between the abhāvas according to their “anuyogins,” but that is so because space is a reality capable of division into parts. The abhāva *qua* abhāva is not affected by the size of its anuyogin. Hence Śaṅkarāchārya's argument that when one bird is flying into the ākāśa, the ākāśa which alone makes the flight possible being destroyed, another bird cannot fly, unless we imagine that the ākāśa itself (or some other entity like space) is Vastusvarupa and so capable of division into parts.

—**Sūtra 24, line 12.** — The passage which Śāṅkarācārya means is given in Yaśomitra's *Abhidharmakośa-vyākhyā* as follows —

उक्तं हि भगवता । पृथिवी भो गौतम कुत्र प्रतिष्ठिता । पृथिवी ब्राह्मण
अम्भण्डले प्रतिष्ठिता । अम्भण्डलं भो गौतम क्व प्रतिष्ठितम् । वायुप्रतिष्ठितम् ।
वायुर्भो गौतम क्व प्रतिष्ठितः । आकाशे प्रतिष्ठितः । आकाशं भो गौतम कुत्र
प्रतिष्ठितम् । अतिसरसि महाब्राह्मण, अतिसरसि महाब्राह्मण । आकाशं ब्राह्मण
अप्रतिष्ठितम् ॥

For a similar situation, of which this may have been possibly an echo, compare the *Bṛihadāraṇyakopaniṣad*, III. vi and viii. —*Bhāskarācārya* quotes a stanza, purporting to be the words of the Buddha, where the existence of the *ākāśa* as an existing entity is clearly admitted—

आकाशस्य स्थितिर्यावद्यावच्च जगतः स्थितिः ।
तावन्मम स्थितिर्भूयाज्जगद्दुःखानि निघ्नतः ॥

The stanza is quoted in the *Bodhicharyāvatārapañjikā* under i. 33.

—**Sūtra 24, line 22.** — The argument is analogous to that given in II. i. 18⁴¹⁻⁵⁸.

—**Sūtra 25, line 1ff.** — The orthodox *Sarvāstivādins* seem not to have ascribed momentariness to the things themselves but only to their phases. "The cause never perishes but only changes its name when it becomes an effect, having changed its state. For example, clay becomes jar having changed its state; and in this case the *name* clay is lost and the *name* jar arises." Mr. Sōgen even suggests that Śāṅkara's doctrine of causality is here anticipated and may even have been borrowed from the *Sarvāstivādins*. He conveniently ignores that Śāṅkara is merely expounding the *Brahmasūtras*, and that the *Chhāndogya Upaniṣad* had certainly preceded all the disputants in the field. It must therefore be assumed that the doctrine that "the phase of a thing or person changes every moment while its substratum is eternal and permanent," is a later development within the Buddhist school, and not the original doctrine of Buddhism as known to the author of the *Brahmasūtras*.

—**Sūtra 25, line 17ff.** — The usual illustrations given to prove the illusion of identity and permanence while in reality there is a momentary succession of similarities are; (i) the flowing river-stream, (ii) the burning flame of the lamp, and (iii) the *jaluṭharapaṭalam* or a patch of clouds (perching on the hill-top).

—**Sūtra 25, line 23ff.** — There seems to be a confusion here between what is transient and what is simple. Because a thing or a sensation or an idea is to last only for a moment, that is no reason why its content must be simple. A very complex idea and even a succession of such complex ideas might in one moment flit across the mind. Compare the usual illustration of "śatapatra-patraśata-vedha" by just one prick of the needle. In fact none of our ideas—however short their duration—are so simple as to comprise just one datum of sense and no more although neither the Buddhists, nor their opponents for the matter of that, seem to have recognised this fact. The whole argument hence is vitiated by this misconception. Bergson, the modern champion of the Doctrine of Momentariness, has, it may be added, secured considerable plausibility for his view by recognising the manifold and highly complex nature of the contents of the transient and successive mind-phases.

—**Sūtra 25, line 27ff.** — In arguing with his opponent Śaṅkarāchārya uses the technical terms of the other school with an easy familiarity. Hence the use of the expression "buddhi-santāna." Compare II. ii. 19¹⁶.

—**Sūtra 26, line 1ff.** — Rāmānuja and Śrīkanṭha assert that the objection in this sūtra has a special application only to the Sautrāntika. Madhva is peculiar in referring sūtras 26 and 27 to the Sūnyavādins. Other Bhāshyakāras generally agree with Śaṅkara's interpretation. With Śaṅkara's interpretation the question arises, what new objection and new argumentation does the present sūtra urge that has not already been urged in passages like II. ii. 20⁵⁻¹²? Having opened the discussion of the internal or subjective phenomena with sūtra 25 (line 1 f.) it is awkward that there should be a return to the discussion of external things in sūtra 26, especially when there is no new point to be brought forward. It is also necessary that, having disposed of the Vaibhāshika view concerning the reality of the external world,

Śāṅkarācārya (and the Sūtrakāra) should have something to say against the Sautrāntika view of the inferability of the external world. Hence Rāmānuja's application of the present sūtra for that purpose seems fairly justified.—Rāmānuja begins by observing—

एवं तावद्देभाषिकसौत्रान्तिकयोर्बाह्यार्थस्तित्ववादिनोः साधारणानि दृष्टान-
न्युक्तानि । तत्र यदुक्तं—संप्रयुक्तस्यार्थस्य ज्ञानोत्पन्निकालेऽनवस्थितत्वाच्च
कस्यचिदर्थस्य ज्ञानविषयत्वं संभवतीति, तत्र सौत्रान्तिकः प्रत्यवतिष्ठते ॥

Rāmānuja states the Sautrāntike view as follows —

ज्ञाने स्वाकारं समर्थं विनष्टोऽप्यर्थो ज्ञानगतेन नीलाद्याकरिणानुमीयते ।

And his refutation takes the line that the *bimba* of the past moment cannot give rise to a *prātibimba* in the present moment. At the same time it so happens that the line of argumentation followed against the Sautrāntikas can be made to have a wider application, such as is given to it in Śāṅkara's interpretation. The Brahmayidyābharapa has perceived the drift clearly, when, after explaining the interpretation of Śāṅkarācārya, it says —

एतेन सौत्रान्तिकपक्षोऽपि निराकृतः । तेहीत्थं कल्पयन्ति—अयं घट इति
चाक्षुषज्ञाने न वर्तमानो घटो विषयः, अपि तु संनिकर्षाश्रयः स्वहेतुः पूर्वक्षणः
स्वप्रतिबिम्बं ज्ञानाकारमर्पयति । स एवायं घट इति । ज्ञानविषयो बाह्यस्तु
प्रतिबिम्बस्य चिम्बपूर्वकत्वानियमादनुमेय इति । तन्निर्गकरणं तु—यथा असतो
नोपादानत्वमेवमसतः पूर्वक्षणस्य न प्रतिबिम्बार्पकता । लोके प्रतिबिम्बसमकाला-
नामेव मुखादीनां चिम्बत्वदर्शनात् ॥

--Sūtra 26, line 3. The words "Nānupamāyidya prādurbhāvāt" are also quoted in Nyāyasūtra iv. i. 14 as a purvapaksha view. I have not been able to trace its ultimate source.

--Sūtra 26, line 28f. For the abhyupagama in line 28 see II. ii. 21, line 3, and our Note on the same. For the abhyupagama in line 29, see II. ii. 18, lines 6-11 and Notes thereon.

--Sūtra 27, line 1. —The interpreters (e. g., Rāmānuja) who limit the application of sūtra II. ii. 26 to the Sautrāntikas only, want to extend the application of the present sūtra to both the Sautrāntikas and the Vaibhāshikas. The wording of the sūtra suggests, however, a direct reference to the preceding sūtra; and

it was this circumstance that probably led Śāṅkarācārya to interpret sūtra 26 in the way he does. The wording of sūtras II. ii. 26, 27 contains nothing that would justify Madhva's interpretation of them as a refutation of the Sūnyavāda.

--Sūtra 27, line 7. — The following is a brief summary of the arguments which Śāṅkarācārya has used, in what is known as the "Samudāya" *adhikaraṇa* (sūtras II. ii. 18-27), against the two Buddhist schools of Sarvāstivāda philosophy--

1. Multiplicity of schools and divergence of views, II. ii. 18³⁻⁶, II. ii. 25²⁷⁻²⁹, II. ii. 32;
2. Physical and psychical aggregates in the absence of some sentient cause of aggregation not possible, II. ii. 18¹⁻⁶ 29;
3. The cycle of twelve Nidānas can possibly explain solitary individual events, but their ordered symmetry and succession remains unexplained, II. ii. 19⁹⁻²⁵, and can have no assignable purpose even if we somehow succeed in explaining it, II. ii. 19²⁵⁻²⁹;
4. Even the individual events cannot however be explained by reason of the acceptance of the doctrine of the momentariness of things, II. ii. 20⁹⁻²⁹, which, on no possible hypothesis, can ever be successfully defended, II. ii. 21;
5. The untenability of the two Nirodhas, II. ii. 22;
6. The unsound and inconsistent view about "nirhetuka vināśa" and "pratīsamukhya-nirodha" as exemplified in the attainment of the Nirvāṇa; also about "Ākāśa," II. ii. 24;
7. The doctrine of momentariness, when applied to facts of inward experience (*c. g.*, memory), becomes absolutely untenable, II. ii. 25, as leading to all sorts of inconvenient consequences;
8. The doctrine assumes the production of what is called "sat" from what is admitted to be "asat," which is impossible, II. ii. 26¹⁻²⁰, II. ii. 27. Change implies permanence as its basis; otherwise it would not be felt as change, II. ii. 26²¹⁻²⁵.

—Sūtra 28, line 1ff. — For the distinction between the Hīnayāna which developed what Śāṅkarācārya here calls the Bāhyārthavāda” and the Mahāyāna which gave rise to the two systems of thought known as the “Vijñānavāda” and the “Śūnyavāda” compare our Note on page 118 before. Historically the Śūnyavāda is earlier than the Vijñānavāda, because Nāgārjuna the reputed founder of the first is placed circa 170–200 after Christ, while Asaṅga the reputed founder of the last is assigned to about A. D. 350. The so-called “founders” of these philosophies, it is now generally recognised, are, however, no more than their most successful expounders or systematisers, since germs of these doctrines have been traced in works produced towards the beginning of the Christian era. There is, therefore, some justification here for abandoning the purely historical, in preference to the more or less logical, method of presentation which seems to have been followed by the Bhāṣyakāra. Whether the Sūtrakāra intended to direct this Adhikaraṇa against the Vijñānavāda, or against the Śūnyavāda (as is contended by Jacobi), is a point to which we will revert towards the end of this Adhikaraṇa.

—Sūtra 28, line 4. — The Vijñānavādins recognise only one (the Vijñāna) out of the five Skandhas or agglomerates which are recognised by the Sarvāstivādins: see Note to II. ii. 18, line 10. They refute the other four aggregates (which presuppose the external world) by arguments involving the “Prasaṅga” (=parasya anisṭhāpādanam) or the *Reductio ad absurdum* method of attack. A good example of this method is to be found in lines 8–12 below. As a destructive weapon it could be rendered almost irresistible, and in fact the Brahmasūtrakāra (to say nothing of Śāṅkarācārya) has himself adopted it in several places (see II. iii. 32; the word *prasaṅga* is used five times in the sūtras, and *prasakti* twice). The mode of argumentation labours under the serious drawback of not requiring any positive thesis or a definite point of view to maintain, and it could accordingly come under the class of Vitandā, which is defined as “Pratipakṣaṣṭhāpanāhino jalpaḥ.” The Vijñānavādin has, as we will presently notice, employed certain independent positive arguments also in support of his position.

—**Sūtra 28, lines 6ff.**—On behalf of the Pūrvapakshin the Āchārya puts forward six arguments which he refutes *seriatim*, besides using four additional arguments to silence the opponent. These are shown below—

<i>Arguments</i>	<i>Answers</i>
(1) II. ii. 28, lines 6-7	II. ii. 28, lines 30-47 ;
(2) II. ii. 28, lines 8-12	II. ii. 28, lines 48-53 ;
(3) II. ii. 28, lines 12-16	II. ii. 28, lines 54-55, 57-63 ;
(4) II. ii. 28, lines 17-19	II. ii. 28, lines 55-56 ;
(5) II. ii. 28, lines 19-22	II. ii. 29 ;
(6) II. ii. 28, lines 23-29	II. ii. 30.

Extra arguments

- (1) II. ii. 28, lines 63-66 ;
- (2) II. ii. 28, lines 67-81 ;
- (3) II. ii. 28, lines 82-91 ;
- (4) II. ii. 31, 32.

—**Sūtra 28, line 6.**—The argument in question is the starting point and the stock-in-trade of all idealistic theories. The world without can reach us only through the gate-ways of sense. Our primary and direct contact is with our own pictures (sensations, ideas, or by whatever other names we might call them) of the external world, and we have no right to assume that there is any world at all to correspond to *our* ideas about it. As in the well-known palace of the Pāṇḍavas built by the Asura Maya, so in what we call the world, a malicious Providence may be amusing himself by creating in us ideas of earth and water where the opposites of these, or in fact where nothing at all, might be really existing. Śaṅkarāchārya's answer amounts to saying that a mere possibility is no argument. In the absence of valid and adequate grounds we have no right to reject the *prima facie* view, especially when it is the view of everybody around us. Moreover, when the idealist argues, "I am sure of my own ideas, but I do not know if there be a world without corresponding to my ideas," is he not surreptitiously imposing the language of space on the "ideas" which, he seems to say, exist somewhere *inside* the four corners of his body ?

—**Sūtra 28, line 10.** — The variant reading “paramānvābhāsajñānānutpatteh” (because [with reference to the pillar] there does not arise in us a perception of their atomic appearance) gives a more straightforward meaning perhaps than the reading “paramānvābhāsajñānānupapattēh” given by us, following most of the editions.

—**Sūtra 28, lines 11ff.** — Ānandagiri thus explains the point—

स्तम्भाद्यवयविनां परमाणुभ्यो भेदे गवाश्ववदत्यन्तवैलक्षण्यम्, अभेदे परमाणुमात्रतया स्थूलरूपेणावभासासिद्धिः ।

And if it is argued that the pillar is different from its parts and yet permanently connected with them by “Samavāya,” that is ruled out by the refutation of the Samavāya theory already made.

—**Sūtra 28, line 12.** — The Advaitabrahmasiddhi (pages 96f.) gives the following refutation of Jāti—

जात्यादीनां व्यक्त्यादीनां चात्यन्तभिन्नत्वे स्वातन्त्र्यप्रसङ्गः । अत्यन्ताभिन्नत्वे तु तद्वदेवातद्भावः । भिन्नाभिन्नत्वस्य च विरुद्धत्वम् ।

The Brahmavidyābharana puts it slightly differently—

जातिः किं कात्स्न्येन व्यक्तिषु वर्तत उतैकदेशेन । नाद्यः, घटान्तरे जात्यनुपलम्भप्रसङ्गात् । न द्वितीयः, जातेर्निर्वयवत्वात् ।

There is, it will be seen, much cheap and irresponsible logic in these so-called “prasaṅga” arguments.

—**Sūtra 28, line 12ff.** — Our ideas of ghaṭa, and the like possess the one common characteristic of being *our ideas*. And just as, if our idea of one and the same object were to be now faint and now clear, we attribute this variation in impression not to anything that has happened to the outward object, but rather to some modification in our own perceptive organism, even so the ghaṭatva, paṭatva, and the other viśeṣhaṇas of our idea, which is the viśeṣhya, must be held to proceed from something that belongs to the idea itself. A concrete physical object outside the idea cannot certainly be joined to the idea as its viśeṣhaṇa as if it were its tail or pendant. Because the ghaṭa, for instance, is five inches in diameter our idea has not that physical dimension or size or shape or colour or the like. The “ghaṭatva” must

therefore be of the very same nature, form and character as the "idea" itself. And once this is conceded, why should we seek an outside something to do duty as the "bimba" in relation to the "pratibimba" of the "jar-ness" in our idea? The obvious reply of course is, why should we not?

—Sūtra 28, line 17ff. — Bhāmati explains the argument as follows—

यद्येन सह नियतसहोपलम्भनं तत् ततो न भिद्यते, यथेकस्मान्चन्द्रमसो द्वितीयश्चन्द्रमाः । नियतसहोपलम्भश्चार्थो ज्ञानेनेति व्यापकविरुद्धोपलब्धिः । निषेधो हि भेदः सहोपलम्भनियमेन व्याप्तो, यथा भिन्नावश्विनौ नावश्यं सहोपलभ्येत, कदाचिद्भ्रापिधानेऽन्यतरस्यैकस्योपलब्धेः । सोयमिह भेदव्यापकानियमविरुद्धो नियम उपलभ्यमानस्तद्व्याप्यं भेदं निवर्तयति । यदुक्तं [धर्मक्रीतिना]—

सहोपलम्भनियमादभेदो नील-तद्विद्योः ।

भेदश्च भ्रान्तिविज्ञानैर्दृश्येतेन्द्राविवादये ॥

—Sūtra 28, line 22ff. — Bhāmati says that the objector who raises this question against the Vijñānavāda position is the Sautrāntika who regarded the external objects as inferable from the diversity of our cognition. The point of the argument on the basis of the vāsanās or subliminal impressions is this. In any act of adult cognition at least 90 p.c. of the factors that go to make up the contents of the cognition in the form 'this is a jar' are supplied by the mind. The contribution of the external physical stimulus is so slight as to be almost negligible. Sometimes indeed, as in hallucinations, it need not at all exist, while, at other times, we are so much obsessed by our own subliminal impressions that although an object *x* is actually present before us we think that we have not *x* but *y* before us. If our vāsanās are so very potent, why not make them masters of the whole field and altogether dispense with the outer world, along with all its puzzling problems?

—Sūtra 28, line 41f. — The full stanza runs thus—

यदन्तर्ज्ञेयरूपं तद्भाविर्विद्वद्भासते ।

सोऽर्था विज्ञानरूपत्वात् तत्प्रत्ययतयापि च ॥

It originally comes from Dinnāga's Ālambana-parīkshā. Compare the Tattvasaṃgrahapañjikā (Gaek. Or. Series), p. 582.

—Sūtra 28, line 45ff. — The māyāvāda advocated by Śaṅkarāchārya denies reality to the phenomenal world, but that is only in the extreme instance, and from the point of view of the Highest Truth such as it is determined, not by any process of human reasoning but by intuitive realisation, and pending that, by the Vedic texts. The Buddhists however claim to appeal to the common-sense of mankind, and they have no right to so flagrantly contradict the same. — In this connection it is worth noting that the Vijñānavādins also differentiate between the absolute (pariniṣpanna), the relative (paratantra), and the imaginary (parikalpita) points of view. The same is also the case with the Śūnyavādins. As Nāgārjuna explicitly states (Madhyamaka Sūtra, xxiv. 8f.)—

द्वे सत्ये समुपाश्रित्य बुद्धानां धर्मदेशना ।
लोकसंवृतिसत्यं च सत्यं च परमार्थतः ॥
येऽनयोर्न विजानन्ति विभागं सत्ययोर्द्वयाः ।
ते तत्त्वं न विजानन्ति गम्भीरं बुद्धशासने ॥

It accordingly becomes a question of determining whose absolute is the real absolute, a question in the proper solution of which one's *credo* is as much liable to lead the judgment as one's reason.

—Sūtra 28, line 53. — The “Prasaṅga” dialectic alluded to here is stated before in II. ii. 28, lines 8-12, and it brings in a fourfold alternative *asti, nāsti, abhayaṃ, anubhayaṃ*. Compare the mode of reasoning followed in the Bhāṣya under II. ii, 11 and elsewhere.

—Sūtra 28, line 56. — Compare the Bhāṣati—

किमेकत्वेनोपलम्भः सहोपलम्भः, आहो एक उपलम्भ ज्ञानार्थयोः । न तावदेकत्वेनोपलम्भो, बहिरुपलब्धेर्विषयस्य । अथ एकोपलम्भः, तत्रापि यथा सर्वं चाक्षुषं प्रभावरूपानुविद्धं बुद्धिबोध्यं नियमेन मनुजैरुपलभ्यते, न चेतावता ध्यादिरूपं प्रभात्मकं भवति, किंतु प्रभोपायत्वान्नियमः, एवमिहात्मसाक्षिकानुभवोपायःवादर्थस्यैकोपलम्भनियम इति ॥

The point is that as all cognition is for the soul (sākshin), and as the soul can reach the world without only through the gate-

ways of sense, it becomes a necessary condition of the soul's perception that the data of our senses be presented to him translated in terms of the mind. The soul cannot witness the physical colour of the cloth as we can purchase it in tins, but can witness the mind's picture of that colour. This means that the mind and its object, the mental picture, are simultaneously presented to the soul, the one being the means (upāya) of the cognition of the other, which accordingly becomes the upeya. But this is no ground for making absolutely no distinction between the pratyaya or cognition and the vishaya, or its object.

—Sūtra 28, line 57ff. — Ghaṭajñāna and paṭajñāna agree in so far as they are jñānas; the real difference between the two must therefore be due to the viśeṣhaṇas which must necessarily be supposed to exist independently of the viśeṣhya. The same applies to the ghaṭajñāna and ghaṭasmarāṇa where two distinct cognitions (direct and remembered) concerning the same object establish the difference between the object and its ideas. In connection with this argument it is however worth noting in passing that Śāṅkarācārya is herein deliberately surrendering a position that he had taken up against the Vaiśeṣhikas in II. ii. 17¹⁷, where the qualities which are the Viśeṣhaṇas he wanted to actually identify with their Viśeṣhyas, the substances.

—Sūtra 28, line 63. — While the Vijñānavādins are peculiar in their idealistic view of the world, they nevertheless agree with the other schools of Buddhism in accepting the doctrine of momentariness, which they apply to the ideas. Our ideas constitute a continuous stream of transitory phases of consciousness, with no permanent or abiding principle as their substratum. There exists, in other words, no Ātman, no one abiding individual percipient. Yet, somehow or other, the totality of the successive consciousness-phases in a given life form an individual group or aggregate, which is designated the Ālaya-vijñāna. Compare our Note to II. ii. 18, line 18 before. Ālaya-vijñāna or "Receptacle-consciousness" is so called because it is the receptacle, the 'granary' into which all a man's ideas and impressions, actual as well as potential, are stored up together in a well-arranged embryonic form. In any present act of cognition only one of these germinal ideas springs up above the threshold of consciousness, the others being either subliminal

or below the threshold, or at the "fringe" of the present consciousness. And since each vanishing momentary consciousness transmits onwards to the consciousness of the succeeding moment all the contents of the granary, a sort of continuity or individuality in a man's consciousness appears to be maintained, not only within the limits of the present life but throughout a given transmigratory period. — Against such a position all the objections urged by the Vedāntins in Sūtras II. ii. 20, 21, 25 and 26 must be held to apply with equal force. A permanent substratum as the noumenal background and basis for the play of the fleeting phenomenal appearances must therefore be assumed; and we may then make that basal principle (as in the Vaiśeṣhika and to some extent in the Sāṃkhya theory) subject to being really affected by the vanishing show of the senses, or make it, like the moon reflected in a sheet of moving water, merely the unconcerned and unaffected seer, as in the Vedāntic theory. See below, II. ii. 31, lines 3-5.

—Sūtra 28, line 64ff. —To differentiate between "pūrvakṣhaṇa-vijñāna" and "uttarakṣhaṇa-vijñāna" and posit a causal relation between them; or between the "ālaya-vijñāna" and the "pravṛtti-vijñāna;" or again, between the "parinishpanna," "paratantra" and "parikalpita-vijñāna;" to assert the momentariness of all Vijñānas; to speak (as does Diṇnāga and after him Dharmakīrti) of some common factor persisting in all the Vijñānas as Vijñānas—

अनेकानुगतं सामान्यं यथा ज्ञानं बोधरूपमित्यादि ।

and of another undefinable factor peculiar to each Vijñāna, which gives it its characteristic content—

सर्वतो व्यावृत्तं व्यक्तिमात्रत्वं स्वलक्षणम् ।

to maintain that this "svalakṣhaṇa" factor contained within a preceding vijñāna produces a subtle subliminal impression on the following vijñāna and so on in an endless succession; to hold that mankind is exposed to the calamity of this Samsāra in consequence of men's nescience, which makes them see reality and permanence and externality where these do not exist; to distinguish between a right and a wrong course of conduct, and to proclaim that the latter leads to bondage and the former to

liberation in the form of Nirvāṇa: all these positions taken by the Vijñānavādin—involving as they do the need of some one or some thing, that is beyond and independent of the series of momentary phases of the mind or consciousness, and that could express these and such other judgments—become altogether inconsistent with the hypothesis of a series of mere momentary Vijñānas, not one of which has the power to “look before and after,” and which reaches the utmost limit of its life-purpose by producing a transient though self-conscious flicker.

—Sūtra 28, line 70 ff. — When an idea occurs to me, I do not have to take a light and see whereabouts in my mind it is : it is self-luminous. Not so an outward physical object. But unto whom can the Vijñāna be self-luminous? Not unto the Ātman, because the Ātman is not admitted; neither unto the “Ālaya-vijñāna” which is itself vijñāna, and which is also momentary. Vijñāna must hence be held to hold the candle unto itself, which is opposed to what is normal. See also below, lines 86ff.

—Sūtra 28, line 75 ff. — “I am reading the book” is the first grade of knowledge, which may be called *receptive* perception. “I am conscious of myself as reading the book” is the second grade of knowledge, which may be called *reflective* perception. “I am conscious of myself as being conscious of myself as reading the book” is the third grade of knowledge, which may be styled *re-reflective* knowledge. Can we carry the process of self-introspection any further; and if so, where are we to stop? Some have argued that, as inhabitants of a world of “three dimensions,” we cannot reach beyond the third grade of knowledge above enumerated. But Śaṅkarāchārya gives the correct answer when he says that there is no *conscious* double reflection in any of our acts of cognition. Further, the percipient is always distinct from the object perceived, be that object a mere book, or the perceiver's act of perceiving. And the perceiving subject *qua* subject, and as long as he continues as perceiver or the Sākshin, refuses to be turned into an object for perception. Nobody in fact dreams of making the subject, at the very same time and in the very same act, an object. — The problem has been very ably discussed by Śaṅkarāchārya in his Aitareyopaniṣadbhāṣya (pp. 59-66, Ānandāsrama edition).

—**Sūtra 28, line 83.** — “Apramāṇagamyā” is Śāṅkarācārya’s paraphrase for “avabhāsakāntaranirapekṣa,” and “anavagan-
trika” for “svayam eva prathate.”

—**Sūtra 28, line 84ff.** — Assuming that the vijñāna is a mass of self-luminousness, where there is neither means nor object for illumination and nobody to watch the illumination, the Pūrva-pakshin says that the nature of this light of vijñāna is of the nature of anubhava or of self-consciousness; but this is playing with words. When there is none to experience it, what is the use of saying that the light in question is of the nature of experience? — In the same strain one can ask the Vedāntin, what is the fun of your endowing the Brahman with the character of intelligence and joy, when there is nothing else that Brahman can know and take delight in, and when Brahman itself cannot be the source of light and joy to any other percipient? If Brahman or Ātman be the self-subsistent Sākshin, what does he stand witness to, and for whom? Śāṅkarācārya can reply that, of the kūṭastha Brahman no description is possible in words, and even “Sachchidanandatva” is not truly predicable of it. But short of that *ultima ratio*, the Āchārya merely replies by saying that there is a world of difference between the Vijñānavādin’s conception of the Vijñāna and the Vedāntin’s conception of the Brahman. As a matter of fact however the two are not so very different from each other. Vijñāna collectively is the “Bodhi” the “Prajñā Pāramitā” or the most perfect intelligence which is the highest reality which embraces the universe (because there can be no universe independently of the Vijñāna), and which is designated as the Tathatā, the real essence (tatha=tathya=tattva), or according to another explanation, the suchness (tathatā) or quiddity, *i. e.*, the supreme substance of the entire universe. The conception can be held to be practically one with the Vedāntic conception of the Brahman, and certain characterisations of his Absolute as given by Asaṅga, *e. g.*, Mahāyānasūtrālaṅkāra, vi. 1—

न सन्न चासन्न तथा न चान्यथा

न जायते व्येति न चावशीयते ।

न वर्धते नापि विशुध्यते पुन-

विशुध्यते तत् परमार्थलक्षणम् ॥

agree word for word with those of the Māyāvādin's Brahman. Compare also Gauḍapāḍakārikā iii. 35, 46 and *passim*, where Manas or Chitta is eventually identified with Brahman.

—Sūtra 29, line 10. — According to the stricter Vedāntic view the dream-experience is to be explained exactly like an ordinary case of error as when one mistakes the rope for the snake, there being the creation of an illusory object by what is called "Anirvachaniya-khyāti." Śāṅkara's speaking of the dream as an act of memory is not therefore according to the orthodox Vedānta as expounded, for example, in the Vedāntaparibhāṣā—

ननु स्वप्नस्थले पूर्वानुभूतस्मरणमात्रेणैव व्यवहारोपपत्तौ न रथादिसृष्टिकल्पनं,
गौरवादिति चेन्न । रथादेः स्मरणमात्राभ्युपगमे रथं पश्यामि, स्वप्ने रथमद्राक्ष-
मित्याद्यनुभवविरोधोपपत्तेः । अथ रथान् रथयोगान् पथः सृजते—इति रथादि-
प्रतिपादकश्रुतिविरोधापत्तेश्च । तस्माच्छ्रुतिरूप्यवत् स्वप्नोपलब्धरथादयोऽपि प्राति-
भासिका यावत्प्रतिभासमुपतिष्ठन्ते ॥

Of this correcter view Śāṅkarācārya is fully aware, as is clear from his Bhāṣhya on Br. Sūtras III. ii. 1. — Compare also his Bhāṣhya on II. i. 14, lines 75-86. That nevertheless he puts forth before his Buddhistic opponent the view that dream is an act of (imperfect) memory is because this view would be readily acceptable to him, while the "anirvachaniya-khyāti" view the Buddhist would at once denounce. No apology on behalf of Śāṅkarācārya is therefore called for. Nevertheless, the Brahmanvidyābharana says—

यद्यपि सिद्धान्ते शुक्तिरजनादितुल्यतात्कालिकस्वाप्नपदार्थगोचरं ज्ञानं साक्षि-
रूपमनुभवः, नतु तत्कालासतः स्वाप्नस्य पदार्थस्य ज्ञानं स्मृतिः, तथापि
प्रत्यक्षादिप्रमाणाजन्यत्वे सति संस्कारजन्यत्वं स्मृतेर्वर्तते, एवं स्वाप्नज्ञानस्यापीति
स्मृतिपदं तत्रैव गौणं द्रष्टव्यम् ॥

—Sūtra 29, line 14. — It is to be noted that Śāṅkarācārya is here assuming the position of inveterate realism while refuting the idealistic theory of his opponents, forgetting that he had himself drawn upon the analogies of dream and Māyā, time and again, in support of his own position. Bhāskarācārya and Keśava Kāśmīrin do not miss the opportunity to rate Śāṅkarācārya for his inconsistent procedure—

ये तु बौद्धमतावलम्बिनो मायावादिनस्तेऽप्यनेन न्यायेन सूत्रकारेणैव निरस्ता वेदितव्याः । यदि बाह्योऽर्थो नाभिप्रेतः स्यात्, किमर्थमित्थं यतेत सूत्रकारः ।

Śaṅkara's defence probably would be that the Vijñānavādin denies outer world altogether and gives you nothing instead but the transient flux of ideas; whereas the Vedāntin admits the external world as only *epistemologically* real, and when he denies it, it is only to affirm its existence in and through the Absolute Brahman. A similar distinction is made between the position of the Sūnyavāda and the Māyāvāda :

सौगतब्रह्मवादिनोरयं विशेषो यदादिमः ।

सर्वस्य मिथ्यात्वं ब्रूते द्वितीयस्तदनन्यताम् ॥

Vijñānabhikṣu also agrees in regarding the Māyāvāda as aprāmāṇika, and the fact that even some of the śruti texts have used the analogies of dream and the like he explains by declaring—

यत्र शास्त्रेषु विकाराणां स्वप्नदृष्टान्तप्रदर्शनं तद्वैराग्यार्थक्षणभङ्गुरत्वादिपरं न पुनर्बाह्यविषयाभावपरम् ।

—Sūtra 29, line 17. — Compare II. ii. 10, lines 42ff.

—Sūtra 30, line 5. — It will be remembered that under sūtras II. i. 35, 36 both the Sūtrakāra and the Bhāṣyakāra had not scrupled to seek support of the argument from “anāditva;” but there it was vouchsafed by the Scripture, whereas here it seems to have been reached by mere excogitation. Moreover, under II. i. 35-36, the problem was cosmological, and justified the appeal to the Scriptures. Here the problem is more or less psychological: namely, whether the mind can have an impression in the utter absence of anything outside the mind to produce the impression at some stage or the other. Hence, argues the Siddhāntin, we are justified in accepting the one, but rejecting the other. Compare also the Bhāṣhya on II. ii. 37, lines 18-22.

—Sūtra 30, line 6ff. — The Pūrvapakṣin had maintained—

Wherever vāsanās, there diversified knowledge, *e.g.*, dreams; Wherever no-vāsanās, there no knowledge.

The Siddhāntin now maintains—

Wherever no-vāsanās, even there diversified knowledge (as in outward perception);

Wherever no-diversified-knowledge, there no vāsanās.

And as mere arguments both ought to fare equally.

—Sūtra 31, line 1 ff. — Compare above, Note to II. ii. 18, line 18 and II. ii. 28, line 63.

—Sūtra 31, line 9. — The Vijñānavādins are also styled the Yogāchāras, just as the Sūnyavādins are often known as the Mādhyamaka school of philosophy. The names are variously explained. Thus—

शिष्यैस्तावद्योगश्चाचारश्चेति द्वयं करणीयम् । तत्र अप्राप्तस्यार्थस्य प्राप्तये पर्यनुयोगो योगः । गुरुक्तस्यार्थस्याङ्गीकरणमाचारः । यैरुभयं संपादितं ते योगाचाराः । यैः पुनर्गुरुक्तमङ्गीकृतं, पर्यनुयोगश्च न कृतस्तेषां मध्यमका मध्यमिका इति वा प्रसिद्धिः ॥

Lévi explains that the Yogāchāra school developed in particular the Yoga point of view which aimed at reaching mystical union with Reality by the method of introspection and meditation. This gave them the idealistic point of view, in the light of which they tried to explain the various stages of illumination called "daśa buddha-bhūmayah" and the courses of conduct known as "adhimukticharyā" leading up to and following upon each of these stages. The Mādhyamikas often claim to be the most faithful followers of the Buddha, the true doctrine of Sūnyatā, which was beyond the comprehension of the other schools) being revealed to them alone. As the Buddha adopted the "Majjhimā Paṭipadā" or the doctrine of the mean, the Mādhyamikas derive the name also from that circumstance. Śaṅkarāchārya dismisses this latter school, however, with rather scant courtesy.

—Sūtra 32, line 5 ff. — Śaṅkarāchārya has been ironical (II. ii. 28⁷³, II. ii. 29¹⁴) and even abusive (II. ii. 28³⁷) before; but that the Buddha, who claimed to have been filled with extreme compassion not only for the whole humanity, but for the whole universe, should have been charged with hatred and ill-will for the world was the most unkindest cut of all.

—It only remains to discuss how far Śaṅkarāchārya has been correct in his interpretation of the Buddhistic sūtras and especially of the last five sūtras directed against the Vijñānavādins. Amongst the Bhāshyakāras, Bhāskara and Vallabha, like Śaṅkara, dismiss the Śūnyavāda by a bare mention. The others assign a separate adhikaraṇa to the school, Rāmānuja and Śrīkaṇṭha and Nimbārka bringing it under the last sūtra (śarvathā'nupapatteś cha), while Madhva is peculiar in distributing the sūtras over the three schools as follows: Bāhyārthavāda, sūtras 18-25; Śūnyavāda, sūtras 26-29; and Vijñānavāda, sūtras 30-32. The language of the sūtras is not particularly propitious to Madhva's interpretation except in the sense that as all the schools of Buddhism agreed on several essential points, all arguments would apply to each of them severally and to all collectively, especially where the wording of the sūtras (e. g., 26, 28, 30) was as vague as vague could be. I am inclined to think that as sūtra 32 has all the appearance of the finale of an attack, the Sūtrakāra wished to throw all the Buddhistic sūtras into just one adhikaraṇa. There is probably a sort of an order observed in taking up the successive Buddhistic doctrines for refutation; but this is mostly logical, and it was more or less immaterial what school was to champion the the various doctrines attacked. We should remember in this connection that the Vijñānavādins, also held by the doctrine of the Śūnya or the Void: see Asaṅga XVIII. 101—

सर्वधर्मा अनात्मानः परमार्थेन शून्यता ।

आत्मोपलम्भे दोषश्च देशितो यत एव च ॥

Vijñāna, according to them is the sole reality belonging to the realm of *relative* knowledge. From the point of view of the highest or the most perfect knowledge, they would accept Śūnyatā, which according to them was not absolute vacuity, but rather the void thought, a mere thus-ness (tathatā) devoid of any characteristic and free from the distinction of subject, object, and knowledge. The extreme Śūnyavāda is, logically speaking, a further process of abstraction in the same direction, which has reached its culmination in the "Eight Noes,*" that famous negativistic formula with which Nāgārjuna commences

* "No annihilation, no production, no destruction, no persistence, no unity, no plurality, no coming-in, no going-out."

his Madhyamaka Śāstra—

अनिरोधमनुत्पादमनुच्छेदमशाश्वतम् ।

अनेकार्थमनानार्थमनागममनिर्गमम् ॥

यः प्रतीत्यसमुत्पादं प्रपञ्चोपशमं शिवम् ।

देशयामास संबुद्धस्तं वन्दे वदतां वरम् ॥

—However, the problem has acquired special significance by reason of Jacobi's contention (*Journal of the American Oriental Society*, 1911, Vol. xxxi, pp. 1-29) that the *Brahmasūtras* refute the *Sūnyavāda* in II. ii. 28-32 as they did not know of the *Vijñānavāda*, which was founded only subsequent to the date of the *Brahmasūtras*. Nāgārjuna, the "founder" of the *Sūnyavāda*, Jacobi assigns to about the end of the second century after Christ. Jacobi's date for Asaṅga and his younger brother Vasubandhu, the "founders" of the *Vijñānavāda*, was based upon a paper of Takakusu (*B. E. F. O.*, 1904) where cir. 450-550 was given as their time; but later researches have effected a shifting of the date to a period earlier by a least 100 years, which however Takakusu is not prepared to concede. This in any case need not seriously affect Jacobi's conclusion. Jacobi's line of argument is as follows. Refutations of philosophical theories can only be made after they are well established; and although germs of these two theories can be traced in the earlier Buddhist literature, it is improbable that the author of the *Brahmasūtras* should have spent so many sūtras over them unless the theories had assumed the prominence that they did after the writings of Nāgārjuna and Vasubandhu. This may be conceded with some reservations.

—Now, a possible way to escape from the clutches of the above argument would be to assert that the refutatory sūtras in question constitute a later addition to the several *Sūtrapāṭhas*. Jacobi does not appear to have seriously considered this possibility. In an independent paper contributed a few years ago, I have discussed this problem as far as the *Vedāntasūtras* are concerned; and with reference to the *Yogasūtras* it is well-known that Deussen has declared the fourth and the last pāda of the *Yogasūtras* to be of the nature of an appendix constituted out of four successive additions (1-6, 7-13, 14-23 and 24-33), the sūtras discussing the Buddhistic views (namely, the *Vijñānavāda*) being

IV. 15-16. Apart, however, from this consideration, which can possibly affect only the date of the philosophical sūtras, has Jacobi succeeded in showing that Nyāyasūtras IV. ii. 26-33 and Brahmasūtras II. ii. 28-32 discuss the Śūnyavāda, and not the Vijñānavāda? This problem deserves to be discussed on its own merits, even though we were to succeed hereafter in discovering some refutation of the Vijñānavāda marked out as such in a text indubitably belonging to a time considerably earlier than A. D. 350. — We naturally have to ignore here the Nyāya passage.

—The burden of Jacobi's proof, as far as the Brahmasūtra passage goes, rests upon a long extract quoted as from a "Vṛittikāra" which is given by Sabarasvāmin aneant his bhāṣhya on Mīmāṃsāsūtra I. i. 5. The passage extends to over ten printed pages (7-18) and is introduced by the remark—

वृत्तिकारस्तु अन्यथेमं ग्रन्थं वर्णयांचकार ।

It introduces, in the course of the proposed alternative explanation, an objector who denies the reality of all perceptions, and his objection is refuted in the passage by arguments which, when put together seriatim, are held to constitute a close commentary on the Vedānta sūtras II. ii., 28 to 32. The Vṛittikāra, we may add, mentions the names of Upavarsha, Pāpini, Jaimini, and Pingala, and also refers to the "Mahāyānika" view, and quotes from the Nirukta and the Aṣṭādhyāyī. We subjoin relevant excerpts from the quoted passage, inserting in brackets at their head the Vedāntic sūtras II. ii. 28-32, on which each is believed to be a commentary—

(नाभाव उपलब्धेः ॥ २८ ॥)

ननु सर्व एव निरालम्बनः स्वप्नवत् प्रत्ययः । प्रत्ययस्य हि निरालम्बनता-
स्वभाव उपलक्षितः स्वप्ने । जाग्रतोपि स्तम्भ इति वा कुड्य इति वा प्रत्यय एव
भवति । तस्मात् सोपि निरालम्बनः ॥—

(वैधर्म्याच्च न स्वप्नादिवत् ॥ २९ ॥)

.....यदि प्रत्ययत्वात् स्वप्नप्रत्ययस्य मिथ्याभावः, जाग्रत्प्रत्ययस्यापि
तथा भवितुमर्हति । । अन्यतस्तु स्वप्नप्रत्ययस्य मिथ्याभावो

विपर्ययादवगतः । कुत इति चेत् । सनिद्रस्य मनसो दौर्बल्यान्निद्रा मिथ्याभावस्य हेतुः । । अचेतयन्नेव हि सुषुप्त इत्युच्यते । तस्माज्जाग्रतः प्रत्ययो न मिथ्येति । ॥

(न भावोऽनुपलब्धैः ॥ ३० ॥)

शून्यस्तु । कथम् । अर्थज्ञानयोराकारभेदं नोपलभामहं । प्रत्यक्षा च नो बुद्धिः । अतस्तद्भिन्नमर्थरूपं नाम न किञ्चिदस्तीति पश्यामः ॥ स्यादेतदेवं यद्यर्थाकारा बुद्धिः स्यात् । निराकारा तु नो बुद्धिः, आकारवान् बाह्योऽर्थः । स हि बहिर्देशसंबन्धः प्रत्यक्षमुपलभ्यते । अर्थविषया हि प्रत्यक्षबुद्धिः, न बुद्ध्यन्तरविषया ॥ —

(क्षणिकत्वाच्च ॥ ३१ ॥)

क्षणिका हि सा, न बुद्ध्यन्तरकालमवस्थास्यत इति । उत्पद्यमानैवासां ज्ञायते ज्ञापयति चार्थान्तरं प्रदीपवदिति यदुच्येत तन्न । न ह्यज्ञातेऽर्थे कश्चिद्बुद्धिमुपलभते । ज्ञाते त्वनुमानादवगच्छति । तत्र यौगपद्यमनुपपन्नम् । । न चार्थव्यपदेशमन्तरेण बुद्धे रूपोपलम्भनम् । तस्मादप्रत्यक्षा बुद्धिः ॥

(सर्वथानुपपत्तेश्च ॥ ३२ ॥)

अपिच काममेकरूपत्वे बुद्धेरेवाभावः, नार्थस्य प्रत्यक्षस्य सतः । नचैकरूप्यम् । अनाकारमेव हि बुद्धिमनुमिमीमहे, साकारं चार्थं प्रत्यक्षमेवावगच्छामः । तस्मादर्थालम्बनः प्रत्ययः । अपिच नियतनिमित्तस्तन्तुष्वेवोपादीयमानेषु पट-प्रत्ययः । इतरथा तन्वादानेऽपि कदाचिद्धटबुद्धिरविकलेन्द्रियस्य स्यात् । न चैवमस्ति । अतो न निरालम्बनः प्रत्ययः ॥

—According to Jacobi the first two sūtras, on the ground that we actually perceive the objects, refute the view that external objects do not exist, the analogy of the dream-objects being pronounced inapplicable. The next two sūtras refute the view that ideas can be concrete realities, seeing that they are in themselves fleeting and have to be at best inferred only — and inferred, let us add, by an enduring percipient. The last sūtra is a general condemnation. We confess that we fail to see the cogency of this "refutation of the doctrine of the Void." The

first two sūtras, it is true, can be indifferently a refutation of the Vijñāna as well as the Śūnya philosophies, because both alike deny reality of the external world. But to argue that "an idea cannot be a real object" implies that the opponent maintained that the ideas *were* real objects; and surely no Śūnyavādin cared to maintain that thesis. It is on the contrary the Vijñānavādin who did this. The Vijñānavādin asserts that "objects are unreal, but ideas are real." This can be met by the assertion which is its direct contradictory, namely, that "objects are not-unreal (nābhāvaḥ), while ideas are non-entities (na bhāvaḥ)." How Jacobi can make the second passage—interpreted by him as a commentary on the last three sūtras—fit in with the rest of the context we are unable to see.

—Jacobi has assuredly done great service to scholarship by pointing out the importance of the present citation from the unknown Vṛttikāra. The citation extends certainly much beyond what Kumārila understood it to do. Nor have we any objection to regard the passage as a sort of a commentary on Brahmasūtras II. ii. 28-32,—at any rate this can be more truly said about the first part of the passage which seems to explain sūtras 28-29: although it seems to us not quite impossible to explain the correspondence of the passage and the sūtras on the ground of sameness of topic. The case is certainly much more problematic as to the latter part. Jacobi seems least convincing in his proposed interpretation of Brahmasūtra II. ii. 30. If it is a Śūnyavāda sūtra its proper interpretation might perhaps be—"Śūnyatā does not exist because of the (proof called) Non-perception"; or, in the words of Kumārila-bhaṭṭa (Slokavārttika, page 343)—

तस्माद्भावगम्यत्वं शून्यतायाः स्थितं हि नः ।

[Commentary—तदेवमभावगम्यत्वमेव शून्यतायाः पार्श्वेऽप्युक्तम् ।]

—But even granting that the Brahmasūtras were originally directed against the Śūnyavāda, it is difficult to imagine what possible motive—not only Śaṅkarāchārya—but even Bhāskarāchārya and Vallabhāchārya could have had in not bringing in a refutation of the Śūnyavāda school under some one or more sūtras? It is at times argued that the Śūnyavāda, in its distinguishing between a 'samvṛiti-satya'

and a "paramārtha-satya," or between the phenomenal and the noumenal points of view, no less than in its conception of the Highest Reality as an aggregate of the "Eight Noes" came so very dangerously near the absolutistic position of the *Māyāvāda* that Śaṅkarāchārya found it prudent not to raise up a hornet's nest about his ears and create suspicion as to the true parentage of the Vedāntic doctrine of Advaita. But we doubt if this would be at all a fair view of the case. The fact is—as indeed Jacobi himself points out—the "Vṛttikāra" speaks of the followers of the *Mahāyāna* in quite general terms without distinguishing between the *Mādhyamikas* and the *Yogāchāras*. Opponents of Buddhism only knew that Buddhistic philosophers had developed a number of peculiar logical and metaphysical positions, and these they tried to refute, without always caring to go into the finer shades of distinction between schools and schools. This last was effected only in the later age of the *Bhāshyakāras* and commentators. As in the case of the *Sāṃkhya* and the *Vaiśeṣika* systems, so also in the case of Buddhism, we accordingly feel inclined to conclude that the *Sutrakāra* had before him a presentation of the opponents' system much more primitive than what is preserved in our extant classical exponents of each.

—Sūtra 33, line 1. — It is worth while noting the differences in apparel and equipment that marked out the followers of one school of philosophy from another. Thus we are told, in regard to the *Sāṃkhyas*—

अथ सांख्यमतं ब्रूमस्ते त्रिदण्डैकदण्डकाः ।
 कौपीनि वसनं तेषां धातुरक्ताम्बराश्च ते ॥
 क्षुरमुण्डा एणचर्मसिना द्विजगृहाशनाः ।
 बीटेति भारते ख्याता दारवी मुखवस्त्रिका ॥
 दयानिमित्तं भूतानां मुखनिःश्वासरोधिका ।

About the *Saivites* we learn—

अथ योगमतं ब्रूमः शैवमित्यपराभिधम् ।
 ते दण्डधारिणः प्रौढकौपीनपरिधायिनः ॥
 कम्बलिकाप्रावरणा जटापटलशालिनः ।
 भस्मोद्भूलनकर्तारो नीरसाहारसेविनः ॥

दोर्मूले तुम्बकभृतः प्रायेण दनवासिनः ।

आतिथ्यकर्मनिरताः कन्दमूलफलाशनाः ॥

The Vaiseshikas are not differentiated from the Śaivites—

अथ वैशेषिकं ब्रूमः पाशुपतान्यनामकम् ।

लिङ्गादि योगवत् तेषां ते ते तीर्थकरा अपि ॥

The Buddhists are thus described—

अथ बौद्धमतं वक्ष्ये मोण्ड्यं कृत्तिः कमण्डलुः ।

लिङ्गं तेषां रक्तवस्त्रं वेषः शौचक्रिया बहुः ॥

The two Sects of the Jainas are thus characterised—

तत्र जैनमते लिङ्गं रजोहरणमादिमम् ।

मुखवस्त्रं च वेषश्च चोलपट्टादिकः स्मृतः ॥

श्वेताम्बरा वन्द्यमाना धर्मलाभं प्रचक्षते ।

शुद्धां माधुकरिं वृत्तिं सेवन्ते भोजनादिषु ॥

दिगम्बराणां चत्वारो भेदा नाग्न्यव्रतस्पृशः ।

पिच्छिकाधारणपराः प्राहुर्नो निर्वृतिं स्त्रियः ॥

नास्ति चीवरयुक्तस्य निर्वाणं सद्ब्रूतेऽपि हि ।

शेषं श्वेताम्बरैस्तुल्यमाचारं देवते गुरौ ॥

Finally, the Bhāgavatas comprise several sub-sects, wearing mudrās, tripundras, Gopichandana marks, and the other familiar sectarian devices, which it is perhaps unnecessary to detail here any further.

—Sūtra 33, line 1ff.— A few general facts concerning the origin and the historical development of Jainism will be useful for an understanding of the discussions that are to follow. While Gotama the Buddha was the founder of Buddhist philosophy, Vardhamāna alias Mahāvira (for whose death B. C. 467 seems to be the most probable date, although others put it as far back as B. C. 484, and even B. C. 527) was only the most successful reformer, belonging to a religious order which was older than Buddhism by at least 200 years, and of which Mahāvira is regarded as the 24th Tirthakara. Pārśvanātha the 23rd (or the last but one) Tirthakara of the Jainas is also a historical figure. The followers of the order founded by him are actually men-

tioned by their earlier name of Nigganthas (Sans. Nirgranthas), not only in the Scriptures of the Jainas (*e. g.* Uttarādhyayana, xxiii), but also, apparently, in the Buddhistic Canon (Dīgha Nikāya, i. p. 57). In the course of time, some laxity seems to have crept into the order; and Mahāvīra expurgated the same by prescribing a strictly rigorous discipline for the monks.

—By way of a corollary from this it follows also that a very large part, if not of the Jain Scriptures themselves, at least of the ideas contained in them, belongs to a date much earlier than that to which the ideas peculiar to Buddhism can be referred. It is also the case that while the Buddhist texts presuppose at each stage, and as their back-ground and source of inspiration, the philosophical ideas developed in the Brahmanical circles, the Jainas seem to have worked out their philosophical conceptions in more primitive and independent circles. The Jain notion of the embodied souls as inhabiting all the four elements; their conception of sin as a subtle matter entering, so to say, into a chemical combination with the substance of the souls and capable of being expelled from it by ascetic practices; their belief in the six colours (*leśyas*) of the soul in accordance with their ethical purity; as also in what is known as the *taijasa-śarīra* of the meritorious persons which has the power, for the benefit or injury of others, to emit heat and light: all these notions proclaim their kinship with that circle of thought and practice which gave rise to the Atharvaveda and to literature of that type. Jainism has suffered in estimation as an ethical and metaphysical system by being deemed as more or less contemporaneous in origin with the other more evolved philosophical systems like the Sāṅkhya, Vedānta, and Buddhism. The fact is that Mahāvīra inherited the ontology of his system from a remoter ancestry, and he probably did little more than transmit it unchanged to succeeding generations.

—The Sacred Canon of the Jainas has undergone considerable vicissitudes. There was an earlier—probably, in essentials, a pre-Mahāvīra—part of the Canon which has been irrevocably lost. This was made up of the fourteen “Pūrvas.” Next there are the “forty-five ($11 + 12 + 10 + 6 + 4 + 2 = 45$) Āgamas” in the form in which they were finally redacted by Devarddhigaṇi at the great Council at Valabhi (A. D. 526): but these labour under

the disadvantage of not being recognised at all by the Digambara section of the Jain community. For purposes of reference we give below a list of the Canon. The language of the Canon is known as Ārsha- or Ardha-Māgadhī.

I.—FOURTEEN “PUVVAS” or Pūrvas (*not extant*)—

- (i) Uppāya (Utpāda);
- (ii) Aggeniya (? Aggrāyanīya);
- (iii) Viriyappavāya (Viryappravāda);
- (iv) Atthinatthippavāya (Astināstippravāda);
- (v) Nāṇappavāya (Jñānappravāda);
- (vi) Sachchappavāya (Satyappravāda);
- (vii) Āyappavāya (Ātmappravāda);
- (viii) Kammappavāya (Karmappravāda);
- (ix) Pachchakkānappavāya (Pratyākhyānappravāda);
- (x) Vijjānuppavāya (Vidyānuppravāda);
- (xi) Avañjha (Avandhya);
- (xii) Pāṇaum (Prāṇāyus);
- (xiii) Kiriyaṇvisāla (Kriyāvisāla);
- (xiv) Logavindusāra (Lokabindusārā).

II—TWELVE AṄGAS—

- (i) Ayāraṅgasutta (Āchārāṅgasūtra), oldest extant text in prose and verse, giving prescriptions for monks, etc.;
- (ii) Suyagaḍaṅga (Sūtrakṛitāṅga), poetic exhortations and philosophic disquisitions, followed by a polemic against Kriyāvāda and Akriyāvāda, Vainayika and Ajñānavāda;
- (iii) Thāṇaṅga (Sthānaṅga), enumeration of different principles in rising numerical groups of 1 to 10;
- (iv) Samavāyanga (Samavāyaṅga), a continuation of the preceding, giving groups of 1 to 100 and more;
- (v) [Bhagavati-]viyāhapaṇṇatti ([Bhagavati-]vyākhyā-prajñapti), exposition of the dogma in the form of dialogues, and containing stories of contemporary philosophers (Jambūli, Gosāla, etc.);
- (vi) Nāyadhammakathāo (Jñātadhammakathāh), a collection of stories, with a moral and religious purpose;

- (vii) *Uvāsagadasāo* (*Upāsakadaśa*), ten chapters narrating stories of pious monks and laymen ;
- (vii) *Antagadasāo* (*Antakriddaśa*), ten chapters narrating stories of pious ascetics who have attained salvation at death ;
- (ix) *Aṇutarovavāiyadasāo* (*Anuttaraupapātikadaśa*), ten chapters giving stories of monks who have attained the highest heaven ;
- (x) *Paṇhāvāgaraanāim* (*Prasnavyākaraanāni*) expositions of prescriptions and interdictions ;
- (xi) *Vivāgasuyam* (*Vipākasūtram*), legends concerning rewards and punishments earned by Karman ;
- (xii) *Diṭṭhivāya* (*Dṛiṣṭivāda*), *no longer extant* : probably an abstract of the " *Pūrvas*," especially discussing philosophical theories.

III—TWELVE UPĀṄGAS (corresponding to the Twelve Āngas)—

- (i) *Ovavāiya* (*Aupapātika*)—concerning the origin of beings in heaven and hell ;
- (ii) *Rāyapasenañña* (*Rājaprasānya*)—Dialogue between king Paēsi and the monk Kesi concerning the soul ;
- (iii) *Jivājivābhigamasūtra*—Discussion on biological subjects ;
- (iv) *Paṇṇāvaṇā* (*Prajñāpanā*)—by an author called *Ayya Sāma*, and treating of thirty-six categories, etc. ;
- (v) *Suriyapaṇṇatti* (*Sūryaprajñapti*)—Jain astronomy ;
- (vi) *Jambuddiyapaṇṇatti* (*Jambudvīpaprajñapti*)—legendary geography of *Bhāratavarsha* ;
- (vii) *Chandapaṇṇatti* (*Chandraprajñapti*)—cosmography of the Heavens, and system of time-reckoning ;
- (viii) *Nirayāvali*,
- (ix) *Kappāvadamsiāo* (*kalpāvatamsikāh*),
- (x) *Pupphiāo* (*Pushpikāh*),
- (xi) *Pupphachuliāo* (*Pushpa chūlikāh*),
- (xii) *Vaṇhidasāo* (*Vṛishṇidaśa*)

Description of the Hells and lower regions as attained by the ten murderous stepbrothers of *Ajātasatru* of Buddhist fame, or as attainable by others.

IV—TEN “ PAIṆṆAS ” OR PRAKĪRṆĀNI (Miscellanies)—

- (i) Chaūsaraṇa (chatuḥśaraṇa), Four Adorables, by Virabhadra ;
- (ii) Āūrapachchakkhāṇa (Āturapratyākhyāna), how one may die peacefully ;
- (iii) Bhattapariṇṇā (Bhaktaparijñā), abstenances prior to death ;
- (iv) Saṁsthāra (Saṁstāra), postures at death ;
- (v) Taṇḍulaveyāliya (Taṇḍulavaichārika), detailing how the foetus grows ;
- (vi) Chandāvijjhaya, (Chandravedhyaka), proper astrological conjunctions for death ;
- (vii) Devindatthava (Devendrastava), praise of Lord Indra ;
- (viii) Gaṇiavijjā (Gaṇitavidyā), Jain Mathematics ;
- (ix) Mahāpachchakkhāṇa (Mahāpratyākhyāna), renunciations prior to death ;
- (x) Viratthava (Virastava), in praise of Lord Mahāvīra.

V—SIX CHHEDA-SŪTRAS (lists not unanimous)—

- (i) Nisīhājhayana (Nisīthādhyayana)] Discussions as to
- (ii) Mahānisīha (Mahānisītha), what constitutes
- (iii) Vavahāra (Vyavahāra), prohibited conduct
- (iv) Āyāradasāo (Āchāradaśa), alias Dasāsuyakkhandha (Daśāśruta-skandha), for monks & for nuns, prescribing punishments
- (v) Bṛihatkalpasūtra, and expiations for the same.
- (vi) Pañchakalpa.

VI—FOUR MŪLA-SŪTRAS—

- (i) Uttarājhayana (Uttarādhyayana) a compilation of dialogues, parables, ballads, etc. concerning ascetism ;
- (ii) Āvassaya (Āvaśyaka), treating of the six daily practices of the monks ;
- (iii) Dasaveyāliya (Daśavaikālika), by Sājjambhava and giving rules of conduct, sententious maxims, and the like ;
- (iv) Pinda- [or Oha-] nījjutti (Pinda- [or Ogha-] nīryukti, being a supplement to the above).

VII—SOLITARY TEXTS—

- | | |
|---|---|
| (i) Nandisutta (Nandisūtra), | } Encyclopædic treatment
of several principles and
practices. |
| (ii) Anuyogadārasutta (Anu-
yogadvāra-sūtra). | |

—This Canon, as before observed, is disowned by the Digambaras, but on various internal and external grounds an age as early as the commencement of the Christian era has been rightly claimed at any rate for the twelve (eleven) Āngas. The Śvetāmbara tradition itself refers the constitution of the canon to about 300 B. C., when a council was held for the purpose at Pāṭaliputra, and the period represented by 300 B. C. to 100 A. D. is probably the period when the Canon was being formed and fixed.

—Sūtra 33, line 26. — The Jain philosophy starts with a dualistic division of the universe into Jīva and Ajīva. The Ajīva is further divided into (i) Dharma, (ii) Adharma, (iii) Ākāśa, and (iv) Pudgala, to which some add (v) Kāla. The Jīva, Pudgala, Dharma, Adharma, and Ākāśa are pradeśātmaka, occupy space, and are therefore often designated as the five “Asti-kāyas,” or “Extended-entities,” Time being excluded from the category because it has *astitva* or existence, but not *kāya/ya* or extension in space. The sentient Jīva comes into contact with the non-sentient Ajīva, and as a result there takes place a pouring in of a subtle material fluid (*āsrava*) which keeps the soul down in bondage (*bandha*)*. When the inlet for this fluid is closed (*saṁvara*), and the fluid that has already penetrated into the soul is driven off by penance (*nirjara*, lit. drying up), the soul is liberated (*moksha*) and soars upwards to the Highest Realms of the Blessed. This gives us, therefore, the five categories of (i) *āsrava*, (ii) *saṁvara*, (iii) *nirjara*, (iv) *bandha*, and (v) *moksha*, to which in some enumerations two more, viz. *pāpa* and *punya* as the ethical causes of the physical effects of *āsrava* and *saṁvara-nirjara*, are added. One thing to be noted here is the peculiar Jain notion of what they call Dharma and Adharma. As Jacobi says, the Jainas have divided the normal functions

* The Jain notion of *Asrava* is much more primitive than that of the Buddhists, who therefore may have been indebted to the Jainas for the idea.

of space as we conceive it into the three moments of Ākāśa, Dharma, and Adharma, the three together forming the necessary condition for the subsistence of all things. The Ākāśa affords them room to subsist; Dharma makes it possible for them to move and to be moved; and Adharma makes them rest in one place. If we ignore these three "Asti-kāyas" there remain the two Astikāyas of Jīva and Pudgala or soul and matter, there being an infinite number of the former, while the latter are either aggregates, or atoms torn off from the aggregates and capable of being fused into them from time to time. This is a very simple description of Jain ontology, against which Śāṅkarāchārya does not find it worth his while to raise any objection. His main objection—and of course that of the Sūtrakāra whose intention he faithfully interprets—is against their so-called "Syādvāda," or "Disjunctive Dialectics."

—Sūtra 33, line 7ff. — In the same breath with their ontological dogma as above described, the Jainas maintain another dogma which in some respects corresponds to the Śāṅkhya doctrine of "pariṇāmi-nityatva," but for the true genesis and explanation of which we have to consider the peculiar intellectual atmosphere within which the religious and philosophical activities of the Buddha and of Mahāvīra fell. Everything which is sat(existing) the Jainas tell us—

उत्पादन्ययध्रौव्ययुक्तं सत् ।

चेतनस्याचेतनस्य वा द्रव्यस्य स्वजातिमजहतो निमित्तवशाद्भावान्तरावाप्ति-
रुत्पादनमुत्पाद इत्युच्यते, मृत्पिण्डस्य घटपर्यायवत् । तथा स्वजात्यपरित्यागेन
पूर्वभावविगमो व्यय इति कथ्यते, यथा घटोत्पत्तौ पिण्डाकृतेः । अनादि-
पारिणामिकस्वभावत्वेन व्ययोदयभावात् ध्रुवं स्थिरीभवतीति ध्रुवः, तद्भावः कर्म
• वा ध्रौव्यम्, यथा घटपिण्डाद्यवस्थासु मुदाद्यन्वयात् ॥

This theory of the indefiniteness or many-sidedness of existence (anekānta-vāda) is in reality a Jain version of the Śāṅkhya doctrine of the constant mutation of the guṇas of the Prakṛiti, or an application to facts of ordinary life of the Vedantic simile of—

वाचारम्भणं विकारो नामधेयं, मृत्तिकेत्येव सत्यम् ।

which originally was intended to apply to only the transcendental Being. The distinction, of course, is that while with the Sāṃkhyas the changing factors are the guṇas and there is no Prakṛiti as, so to say, a substance over and above the mere sum of the three guṇas; and while with the Vedāntins the changing is the unreal, the Real or the Brahman being incapable of any change; the Jainas regard mutability as an aspect of the Immutable, the 'utpāda' and 'vyaya' being regarded as the guṇas of the 'dhruva' substance. On these premises it is obvious that concerning a given padārtha we can make *from divergent points of view*, different apparently contradictory statements. Thus we are told—

प्रश्नवशादेकस्मिन् वस्तुनि अविरोधेन विधिप्रतिषेधविकल्पना सप्तभङ्गी ।
तद्यथा—स्याद्घटः स्वात्मना, स्याद्घटः परात्मना, इत्यादि ।

This seems to mean that (i) if somebody has told you that a ghaṭa has a specific shape, and an object normally called the ghaṭa but not having that particular shape is presented to you, you will declare it to be "aghata," though it really is "ghaṭa." Your assertion will thus depend upon *your conception* of what a ghaṭa is. (ii) Similarly, to you the essence of the ghaṭa might consist in its broad-bottomed shape, and not in its smell or colour, and so you would be justified in asserting that inasmuch as the object before you has that given shape it is ghaṭa, but inasmuch as it has the unwanted smell or colour, it is aghata. (iii) Or, a given ghaṭa may not be large enough to serve your purpose and so you can say it is no ghaṭa *to me*: and so on, from several other points of view that can be enumerated. In a sense this is a truism. It amounts to saying that men's points of view differ. But as a proposition of universal application it can imply that all our judgments are particular or individual judgments which have to be always considered in the given limitations of time, place, circumstance, use, intention, etc. If, therefore, we had to depend *exclusively* upon the judgments of men, it is clear that there could be no consensus of opinion, and therefore no certainty. But, fortunately, the Jainas would argue, the Āgamas, which are the works of the Āpta or reliable and omniscient persons, have declared the existence of the seven Padārthas and

five "Asti-kāyas," and we are saved from the purely sceptical attitude to which the "Syādvāda" by itself would lead us. Śāṅkarācārya, no less than the Sūtrakāra, ignores this latter safeguard, and succeeds in proving that, as a mere "anaikāntika" theory of predication, the Syādvāda must return upon itself, and end in doubting the doubter himself.

—Sūtra 33, line 24. — The Jain texts are not anxious to *prove* their Padārthas, any more than the Vedāntins are to prove their Brahman. That rests on the authority of the Āgama, and reasoning can do it harm only, if applied. There is, however, one essential difference between the two. (i) Unlike the Vedāntin the Jain brings in his dialectics even to explain the facts of ordinary life. (ii) Secondly, the omniscient Tirthakara of the Jainas can never become the Creator of the Universe, because, in the first place, they do not believe in the creation or the dissolution of the world; secondly, because the Tirthakara, along with his omniscience, develops an absolute indifference to all mundane concerns whatsoever; and thirdly because, with their dualistic starting point, the only relation that they could think of between spirit and matter was that of repulsion. Thus it happens that God, the Creator, is entirely unavailable to the Jainas, and this in a way knocks off the basic support of their Āgamas. And even if it were otherwise, Śāṅkarācārya was not expected to lay much stress upon this argument on the ground of the veracity of the Scriptures of his opponent: Compare Sūtra 38, line 8ff.

—Sūtra 33, line 28. — Śāṅkarācārya forgets for the time that his conception of the "Māya" is open to the same charge. The defence probably would be that this Māyā is a transcendent entity that is not introduced in and out of season to explain the facts and phenomena of ordinary life. But even so, Śāṅkarācārya's own argument in the present passage can be forced down his own throat. As Kumārila says in another context (Ślokavārtika, p. 219)—

तस्माच्चान्नास्ति तन्नास्त्येव यत् त्वास्ते परमार्थतः ।

तत् सत्यमन्यन्मिथ्येति न सत्यद्वयकल्पना ॥

—Sūtra 33, line 37. — It remains to explain how the seven propositions of the Syādvāda came to be formulated. From the data supplied by Buddhist as well as Jain Scriptures, we know that the time during which these prophets and teachers flourished was a period of considerable intellectual upheaval, no less remarkable than the age of the "Sophists" in Greek Philosophy before the advent of Socrates. Agnostic and Sceptical dialectics had run so rampant in the age, and they had such a ruthless logic at their command, that it had become very difficult for any established dogma or institution to hold its own against their attack. The Buddha had accordingly to leave a number of vital metaphysical questions "avyākṛita" or unexplained. Mahāvīra (who might be safely credited with the invention of the Syādvāda dialectics) apparently pursued the bolder method of turning the tables against his Sophist opponents. One typical Sophist of the day was Sañjaya Belaṭṭhiputta who took an extremely agnostic attitude, answering, in reply to any question put to him,—

‘अत्थि’ ति पि मे नो, ‘नत्थि’ ति पि मे नो, ‘अत्थि च नत्थि च’ ति
पि मे नो, ‘नेवत्थि न नत्थि’ ति पि मे नो ।

Mahāvīra probably tempered this agnosticism by lending to it an apparently positive aspect. Whereas Sañjaya had said: "I *cannot* say if it is, and I *cannot* say if it is not," Mahāvīra declared; "I *can* say that the thing in-a-sense *is*, and I *can* say that the thing in-a-sense *is not*." He further added that while mere human judgment could lead only to such uncertainties, Scriptures had taught an indubitable doctrine, which, of course, it behoved all true followers to accept. This would logically involve a distinction between the point of view of the highest truth (nīśchaya-naya), and the ordinary (vyavahāra) point of view; and the Jain philosophers are not averse to recognise this. Understood in its historical setting, we are thus enabled to appreciate the Syādvāda in its true aspect and to evaluate it accordingly.

—Sūtra 33, line 38f. — Analogously to the Seven Propositions of the Syādvāda, the Jain texts speak of Seven "Nayas" or Modes, viz.—(1) Naigama, (teleological aspect); (2) Saṃgraha (class aspect); (3) Vyavahāra (empirical aspect); (4) Rījusūtra

(immediate or *prima facie* aspect); (5) Śabda (denotative aspect of names); (6) Samabhirūḍha (etymological denotation of names); and (7) Evambhūta (context aspect). For definitions and illustrations of these consult, amongst others, *Tattvārtharājavārttika* (Pannālāl's edition, pages 65ff.). Regarding the seven propositions of the *Syādvāda* and their scope, the following quotation will be found useful—

तद्विधानविवक्षायां स्यादस्तीति गतिर्भवेत् ।
 स्यान्नास्तीति प्रयोगः स्यात् तन्निषेधे विवक्षितं ॥
 क्रमेणोभयवाञ्छायां प्रयोगः समुदायवान् ।
 युगपत् तद्विवक्षायां स्याद्वाच्यमशक्तिः ॥
 आद्यावाच्यविवक्षायां पञ्चमो भङ्ग इष्यते ।
 अन्यावाच्यविवक्षायां षष्ठभङ्गसमुद्भवः ॥
 समुच्चयेन युक्तश्च सप्तमो भङ्ग उच्यते ।

Regarding the definite occasions when the above dialectic can be used, the *Brahmavidyābharana* notes—

सांख्येन यत् सत्त्वैकान्त्यमुपगतं तन्निवृत्तये आद्यो भङ्गः । शून्यत्व-
 वाद्युपगतासत्त्वैकान्त्यनिवृत्तये द्वितीयो भङ्गः । कालभेदेन सत्त्वासत्त्वे
 तार्किकोपगते तदनैकान्त्याय तृतीयो भङ्गः । वेदान्तिना अनिर्वचनीयत्वमुप-
 गम्यते तदनैकान्त्याय चतुर्थो भङ्गः । सत्त्ववादिनं प्रति सत्त्वेनानिर्वचनीयत्वं
 पूर्वपक्षिणोद्भावितम्, असत्त्ववादिनं प्रति असत्त्वेनानिर्वचनीयत्वं पूर्वपक्षवादिनो-
 द्भावितम्, सदसत्त्ववादिनं प्रति ताभ्यामनिर्वचनीयत्वं पूर्वपक्षवादिनोद्भावितम्,
 तदनैकान्त्यद्योतनायावशिष्टास्त्रयो भङ्गाः ।

This probably is a later refinement within the school. There is, however, some justification in the argument that if the *Syādvāda* is intended merely to assert that things can be looked at from various points of view, that is a truism which cannot establish the proposition concerning the mutability of the *real nature* of things. As Appaya Dikshita says in his gloss on the *Srikanṭha-bhāṣya* on the passage—

घटादिः स्वदेशेऽस्ति, अन्यदेशे नास्ति, स्वकालेऽस्ति, अन्यकाले नास्ति, स्वात्मनास्ति, अन्यात्मना नास्तीति देशकालप्रतियोगिरूपोपाधिभेदेन सत्त्वासत्त्वसमावेशे लौकिकपरीक्षकाणां विसंप्रतिपत्त्यभावः । नत्वेतावता पराभिमतं वस्त्वनैकान्त्यमापद्यते । स्वकाले सदेव, अन्यकाले असदेव, इत्यादि-नियमस्य भङ्गाभावात् ।

As we have already said, it is the Āgama that proves the Syādvāda : Syādvāda cannot itself prove Syādvāda.

—Sūtra 33, line 40. — The Jain theory of atoms is thus stated—

एकरसवर्णगन्धं द्विस्पर्शं शब्दकारणमशब्दम् ।

स्कन्धान्तरितं द्रव्यं परमाणुं तं विजानीहि ॥

The Jain atoms are thus infinitesimal, eternal, ultimate, and—unlike the Vaiśeṣika atoms, but rather resembling in this the Buddhist atoms—qualitatively alike. They have weight, and are hence capable of downward as well as upward motion. But the whole theory is somewhat crude. Keith observes (*Logic and Atomism*, page 16), "The fact that the Jain school retained the theory without any substantial development is merely one of the many proofs of the metaphysical barrenness of the school." We have to observe in this connection that the main interest of Jainism was in other domains than in metaphysics.

—Sūtra 34, line 3ff. — The Jīvas are divided by the Jainas into the two main classes of the 'free' and the 'bound,' the latter being further divided into 'sthāvaras' or immobiles, that are endowed with only the sense of touch and inhabit the earth, water, light, wind, and plants of all kinds; and the 'trāsas' or mobiles, which are endowed with two, three, four, and five senses and inhabit the bodies of the water-insects, gnats, bees, and animals—and others of the type of each, respectively. The bodies inhabited by these Jīvas are classified into (1) audarika or physical, (2) vaikriya which are the plastic sheaths of the gods and denizens of hell, (3) ahāraka of saints, (4) taijasa or magnetic, and (5) kārmanas. The first and the last two are shared by all unliberated souls. The souls are all immortal and have to undergo countless succession of transmigrations following their own karman, until, by means of the

saving doctrine of Jainism, they are transported to the Realm of the Blessed which is situated in the Highest Heaven.

—Sūtra 34, line 9. — As we have seen, Jīva is an “*asti-kāya*” and so occupies space. With regard to its magnitude, we are told—

असंख्येयाः प्रदेशा धर्माधर्मैकजीवानाम् ।

and in the case of each Jīva we learn—

जीवस्तावत् संहरणविसर्पणस्वभावत्वात् कर्मनिर्वर्तितं शरीरमणु बृहद्वा-
धितिष्ठंस्तावद्वगाह्य वर्तते ।

The usual illustration of the process is that of a lamp which can, according to circumstance, diffuse its light within a small room, a larger hall, or the wide space without. The specific difficulty put forward by Śāṅkarāchārya, the Jainas would probably meet by declaring this description of the soul in terms of space as figurative only ; or by the supposition that, out of the infinite parts of the soul, only eight, occupying the very centre of each soul, are the really essential parts ; or finally—
“*Arhadāgamapramāṇyāt*” (*Tattvārtharājavārttika*, page 203), adding that there is also “*Svapakshadoshaprasaṅga*” in the conception of the Ākāśa and the śrotrendriya. The Brahmasūtrakāra (to judge from the defence put forth) thus seems to have laid his unerring finger upon a real vulnerable point in the system.

—Sūtra 34, line 13f. — Śāṅkarāchārya’s contention that a small body cannot conceivably comprise an infinite number of parts is rather crude. If the *avayava* is *sufficiently minute*, the number of them contained in the human body may transcend the calculation-powers of man—and that is all that infinitude can mean. Compare the Nyāya-Vaiśeṣika argument that if we do not agree to the proposed size of an atom as $\frac{1}{4}$ th part of the tertiary-atom, but go on indefinitely dividing and sub-dividing, mount Meru and a mustard seed would be equal in dimension.

—Sūtra 35, line 6. — It is the Sāṃkhyas who admit the doctrine of “*pariṇāmi-nityatva*” or fixity of the essence amidst the mutations of the *guṇas*. To the Vedāntins every *real* modification implies impermanence. Compare our Note to II. ii. 33, line 7ff.

—The simile of the skin of the body which wears out every moment is expressed by the old stanza quoted fully in the *Sarvadarśanasamgraha* (ii. 78-79) and referred to by *Sureśvara* in the *Naishkarmyasiddhi*, ii. 60—

वर्षातपाभ्यां किं व्योम्नश्चर्मण्यास्ते तयोः फलम् ।

चर्मोपमश्चेत् सोऽनित्यः खतुल्येश्चदसत्फलः ॥

—*Sūtra* 35, line 7. — The Jainas have surpassed most philosophers, in the variety and minuteness of their classifications of *Karman*. There are eight main types of *Karman*, distributed into as many as 148 sub-types. The main types are—

- | | | |
|---------------|---|---|
| Ghāti-karmas | { | <p>(i) Jñānāvaraṇiya—which obscures, the souls' in-born right to knowledge ;</p> <p>(ii) Darśanāvaraṇiya—which obscures right intuition and makes men heretics; it also brings on sleep ;</p> <p>(iii) Antarāya—which hinders the good tendencies, and so leads the soul on the path of sin.</p> <p>(iv) Mohaṇiya—which exposes the soul to passions and temptations ;</p> |
| Aghāti-karmas | { | <p>(v) Āyushka—which determines the type and the duration of the next life ;</p> <p>(vi) Nāma—which determines the body and the number and nature of the indriyas to be assumed by the soul ;</p> <p>(vii) Gotra—which determines the nationality, caste, family, and social standing of the next birth, and</p> <p>(viii) Vedanīya—which brings on us suffering by obscuring the bliss-nature of the soul.</p> |

In certain enumerations, number (iii) *Antarāya* and number (viii) *Vedanīya* change places. The first four are classed as “ *Ghāti* ” because they occasion positive impediments to salvation, which it is possible to get rid of in this life; the remaining four are not so positively mischievous; but they are responsible for

determining the nature and circumstance of the next life of the transmigrating self, and these are the basic but indirect causes that determine the quality of one's Karmans. Further, the "Aghāti" Karmans are incapable of being destroyed in the present life.

—Sūtra 35, line 8. — The following quotation develops the simile of the gourd to its fullest possibility—

तथथा गुणवद्भूमिभागारोपितमृतुकालजातं पोषणकर्मपरिणतं
कालच्छिन्नं शुष्कमलाव्वप्सु न निमज्जति, तदेव गुरुकृष्णमृत्तिकालेपैर्धनैर्वहु-
भिरालितं घनमृत्तिकालेपवेष्टनजनितागन्तुकगौरवमप्सु प्रक्षिप्तं तज्जलप्रतिष्ठं भवति,
यदा त्वस्याद्भिः क्लिन्नो मृत्तिकालेपो व्यपगतो भवति, तदा मृत्तिकालेपसङ्ग-
विनिर्मुक्तं मोक्षानन्तरमेवोर्ध्वं गच्छति । एवमूर्ध्वगौरवगतिधर्मा
जीवोप्यष्टकर्ममृत्तिकालेपवेष्टितस्तत्सङ्गात् संसारमहार्णवे भवसलिले निमग्नो
भवासक्तोऽवस्तिर्यगूर्ध्वं च गच्छति, सम्यग्दर्शनादिसलिलक्लेदात् प्रहीणाष्टविधकर्म-
मृत्तिकालेप ऊर्ध्वगौरवादूर्ध्वमेव गच्छत्या लोकान्तात् ॥

—Sūtra 35, line 10. — Apparently therefore the doctrine of the eight central particles of the soul (see above, Note to Sūtra 34, line 9) is a post-Śāṅkara development.

—Sūtra 35, line 16. — Under the cover of the word "ādi" the Bhāmatikāra introduces a new criticism of the theory by inquiring whether the soul's chaitanya is shared by each constituent particle of the soul, or by a given number of particles in their totality--

तेषां प्रत्येकं चैतन्ये बहूनां चेतनानामेकाभिप्रायत्वनियमाभावात् कदा-
चिद्विरुद्धद्विक्रियत्वेन शरीरमुन्मथ्येन । समुच्चैतन्ये तु हस्तिशरीरस्य पुत्तिका-
शरीरत्वे द्वित्रावयवशेषो जीवो न चेतयेत् ।

—Sūtra 35, line 19. — In the first interpretation the word "par-
yāyena" meant "by turn," "alternately;" in the second inter-
pretation it denotes unending succession.

—Sūtra 36, line 1ff. — The sūtra is variously interpreted—

शंकर— { (1) अन्त्यस्य (मोक्षावस्थजीवपरिमाणस्य) अवस्थितेः
 (नित्यत्वात्), उभयोः (तत्पूर्वयोरप्यमध्यम-
 परिमाणयोः) नित्यत्वात् (आत्मपरिमाणाविशेषत्वेन

 नित्यत्वं) [प्राप्नोति];

भास्कर, }
निम्बार्क } —Same as Saṅkara (1).

—*Sūtra* 36, line 3. —The process of liberation according to Jain philosophy is as follows. With the destruction of four “ghāti” karmas there results during the life-time of the soul the absolute knowledge ‘kevala-jñāna.’ When the body falls down at death, there results the destruction of the “aghāti” karmas, and the soul thereupon ascends higher and higher until he gains the top of the universe—

तन्वी मनोज्ञा सुरभिः पुण्या परमभास्वरा ।

प्राग्भारा नाम वसुधा लोकमूर्ध्नि व्यवस्थिता ॥

चलोकतुल्यविष्कम्भा सितच्छत्रनिभा शुभा ।

ऊर्ध्वं तस्याः क्षितेः सिद्धा लोकान्ते समवस्थिताः ॥

Such liberated souls, although freed from the audarika (terrestrial), taijasa (igneous), and kārmaṇa (transmigratory) bodies, can occasionally assume āhāraka (translocatory) body by means of which they can now and then pay visits to Tirthakaras who occupy the highest region of the Universe—the use of the āhāraka being also permitted to the Jivanmuktas even before the falling away of the body at death. The liberated souls constitute a hierarchy in the Highest Heaven with the first Tirthakara as their supreme head. The Jainas, as before observed, do not need any God to create the world, but the place of a god for devotion and worship is taken by the several Tirthakaras and their immediate disciples, the Gaṇadharas.

—*Sūtra* 36, line 6.—There is lacking in this adhikaraṇa the general condemnatory sūtra, unless we regard the word ‘aviśeśah’ as implying reference to sūtra II. ii. 32, as Saṅkarācārya seems to suggest. —While Saṅkarācārya’s criticism of Jainism is to be understood with the limitations as above indicated, it seems at the same time necessary to say here finally that Jainism has to be evaluated more as a religion than as philosophy, at least so far as its origins are concerned. Accordingly one cannot help deprecating a judgment like the following (Hopkins, *Religions of India*, p. 297)—“A religion in which the chief points insisted upon are that one should deny God,

worship man, and nourish vermin, has indeed no right to exist." And yet, like some other things that may also not possess the 'right to exist,' it has existed for over two millenia, and has produced excellent types of men—both monks and house-holders—and has offered real guidance and solace to many a seeking and believing votary.

—Sūtra 37, lines 3-6. —The following extracts from the Śāṅkarabhāṣya on the sūtras in question will explain the exact point—

ब्रह्म च 'जन्माद्यस्य यतः' इति लक्षितम् । तच्च लक्षणं घटरुचकादीनां मृत्सुवर्गादिवत् प्रकृतिकत्वे, कुलालसुवर्णकारादिवन्निमित्तत्वे च समानमित्यतो भवति विमर्शः—किमात्मकं पुनर्ब्रह्मणः कारणत्वं स्यादिति । तत्र..... ईक्षापूर्वकं हि ब्रह्मणः कर्तृत्वमवगम्यते । । ईक्षापूर्वकं च कर्तृत्वं निमित्तकारणेष्वेव कुलालादिषु दृष्टम् । । इत्येवं प्राप्ते ब्रूमः— 'प्रकृतिश्च' उपादानकारणं च ब्रह्माभ्युपगन्तव्यं निमित्तकारणं च, न केवलं निमित्तकारणमेव । कस्मात् । 'प्रतिज्ञादृष्टान्तानुपरोधात्' ॥

The 'pratijñā' refers to the promise concerning the knowledge of everything by the knowledge of one thing, which, Śāṅkarāchārya tells us in his Bhāṣya on II. iii. 6, is to be understood not "kshīrodaka-nyāyena" but the "prakṛiti-vikāra-nyāya"—

क्षीरोदकन्यायेन च सर्वविज्ञानं कल्प्यमानं न सम्यग्विज्ञानं स्यात् । नहि क्षीरज्ञानगृहीतस्योदकस्य सम्यग्विज्ञानगृहीतत्वमस्ति । तस्मादशेष-वस्तुविषयमेवेदं सर्वविज्ञानं सर्वस्य ब्रह्मकार्यतापेक्षयोपन्यस्यत इति द्रष्टव्यम् ॥

The "dṛiṣṭānta" is the famous 'earth and jars' in Chhāndogya vi. 1-2. —The next sūtra adduces in support of the position the "Bahu syām, prajāyeya" passages, where Brahman thinks not only of creating the world, but of *itself being it*.

—Sūtra 37, lines 10 f. —The Yogasūtras of Patañjali, which is the Classical exposition of the Yoga doctrine, has only one sūtra where Īśvara is mentioned and defined (i. 24)—

क्लेशकर्मविपाकाशयैरपरामृष्टः पुरुषविशेष ईश्वरः ।

In the four other sūtras where the word occurs, it occurs in combination with 'prapīdhāna' and as one of the possible objects

of meditation. It is quite clear that, having once recognised God for the sake of appearances, the Philosophy of Yoga as expounded by Patañjali, is not over-willing to make him a vital part of the system. It is Vāchaspati-miśra who asserts, under iv. 3, that—

प्रकृतिरेव जगत्कारणम् । ईश्वरस्तु (प्रकृतेः) साम्यपरिणामादि-
रूपाखिलावरणभङ्गेनोद्बोधकः ।

In the "Sāṃkhya-Yoga" system as presented by the Gītā, and in portions of the Mahābhārata, Īśvara plays a more important rôle. In passages like (Gītā, xv. 16f.; cp. also xiv. 3, vii. 4f.)—

द्वविमौ पुरुषौ लोके क्षरश्चाक्षर एव च ।

.....

उत्तमः पुरुषस्त्वय्यः परमात्मेत्युदाहृतः ॥

God has almost become the pantheistic deity of the Vedāntins, though passages are occasionally met with in the Epic where God is the Controller of the Prakṛiti. Śaṅkarāchārya is here thinking probably of a treatment of the Yoga doctrine where Īśvara is of more consequence than in our Yogasūtras, and yet much short of what the Gītā seems to make him. What exactly is the text in the mind of the Bhāṣyakāra, and what is the part that such a text played in the genesis and evolution of the Early Sāṃkhya Philosophy is a moot point. Compare Notes, page 69, before.

—Sūtra 37, line 12 ff.—The brunt of the attack of this adhi-
karaṇa is of course against the Māheśvaras or Pāśupatas, so that in explaining how the Sūtrakāra was led to bring in these Śaivite systems in immediate succession to his attack on Jainism the Ratnaprabhā observes—

लुब्धितकेशमतनिरसनानन्तरं जटाधारिर्शिवमतं बुद्धिस्थं निराक्रियत इति

प्रसङ्गसंगतिमाह—इदानीमिति ।

—The origin of the Māheśvaras is lost in obscurity. Although the terrific Rudra is mentioned about 75 times in the Rīgveda and has three entire hymns addressed to him, he occupies a very subordinate position in that Veda, and the epithet "Śiva" is used in connection with him only once in the Tenth Maṇḍala. In the Yajurveda he appears in a much more developed form

and is the frequent subject of prayer and worship; and there is even a mention of more than one form of him. These forms, sometimes invoked under the distinctive titles of Bhava, Śarva, Īśāna, etc., and representing possibly so many distinct divinities at first, came in course of time to be fused into the Great God who, in the Atharvaveda, is already elevated to the position of the "Lord of Beings" or Bhūta-pati. The eleven forms of the Rudra are definitely formulated in the Brāhmaṇas and in the subsequent theosophic speculations; and, particularly in the Śvetāśvatara Upanishad, the God has already taken his rank as the All-highest, and as the Creator of the World, while the Mahābhārata has several legends to narrate concerning that aspect of the God. The so-called Śaivaite Upanishads belong of course to a much later age. But it seems now to be generally conceded that the deity had its first home somewhere outside the pales of Vedic Aryandom: that he was originally a god of the forests and mountains, whose cult and worship was already well-established and wide-spread amongst a section of the aborigines and of the pre-Aryan inhabitants of India—the Nishādas and the Dravidians. Mr. Narasimha Swāmi even suggests that "Rudra" was no more than the title of the head of the ancient tribe of the "Bhūtas," with Rudrāṇī as the title of his consort. That is not improbable in itself. In any case, it is evident that the Aryans borrowed the Rudra cult from their non-Aryan predecessors.* It is uncertain, however, as to whether the phallic worship was a part of this Rudra cult, or whether it originally belonged to another section of the pre-Aryan inhabitants of India. Prof. K. R. Subramanian, in his recent book on the Origin of Śaivism (Madras, 1929) makes the old Nāga tribes of Ancient India responsible for the origin and evolution of the serpent-worship, phallic-cult, and other features peculiar to Śaivism. That the phallic worship belongs to the pre-Vedic period, (cp. the epithet. "śiśnadevāḥ" which occurs twice in the R̥gveda), and that in one form or another it was once prevalent in Assyria and all

* Compare in this connection the story of Dakṣha, how he was punished for denying Śiva a place amongst the regular Vedic Gods with the words—

सन्ति नो बहवो रुद्राः शुलहस्ताः कपर्दिनः ।

एकादशस्थानगता नाहं वेदो महेश्वरम् ॥

around the coast of the Mediterranean is now practically proved. And if, amongst certain sections of the Māheśvaras of Mediæval India, certain aberrations in practice are known to have been current, we can attribute that as much to the original inheritance of the cult, as to the sensuous propensities of a more debased age. *

—As a system of philosophy with a literature of its own Śaivism can be definitely traced to the early centuries of the Christian era. Patañjali (to Pāṇini v. 3. 99) refers to the images of Śiva, Skanda, and Viśakha; the Śāntiparvan speaks of the Pāsupata as one of the five established schools of religious doctrine; and references since Kālidāsa's time can be cited without end. There are also the Vāyu, Liṅga, and other Śaiva Purāṇas of a somewhat uncertain date and authenticity. The so-called Śaiva "Āgamas," of which a traditional list of 28 is preserved, belong to a period not later than A. D. 500, whereas for Nakuleśa (rather Lakuleśa, from *lakula*, a club), a native of Gujarāt and the founder of the orthodox Pāsupata Philosophy, dates as early as the beginning of the Christian era, and as late as the 3rd or 4th century after Christ, have been variously claimed, the earlier date being probably the more correct one. What exactly was the innovation introduced by Lakuleśa in the Śaivite Philosophy current before his time, it is not now possible to determine. The philosophical religion as established by Lakuleśa in time branched off into the four schools known as Śaiva, Pāsupata, Kāruka (*v. l.*, Kārunika, Kālāmukha), and Kāpālika. The first of these is the most moderate and rational, and it developed ultimately into a philosophical system akin to the Viśiṣṭādvaita. The Śrīkaṇṭha *alias* Nilakaṇṭha Bhāṣhya on the Brahmasūtras belongs to this school, and most of the literature of the Tamil or Dravidian Śaivism follows the same persuasion. The Pāsupatas are more extreme in their ritual, but none too weird and dreadful as the other two schools, whose ritual is characterised by Śāktic practices of a revolting type. The sphere of activity of these four schools (which may have originated in Northern India) was subsequently mostly confined to the Central and Peninsular India, while in Kāśmīr there arose about the 7th or the 8th century after Christ another form of Śaivism passing under the name of "Spanda" and

"Pratyabhijñā" schools,* with extensive literatures of their own that is gradually being brought to light. A yet more modern development of Śaivism is the cult of the *Līṅāyatas* founded (?) by Basava about the middle of the twelfth century. In nearly all of these Śaivite schools, Tāntric ritual of a kind, consisting in the repetition of mystic formulæ to the accompaniment of symbolical movements of parts of the body, is generally proscribed amongst the disciplines for the novices, and these Śaivite practices, or their analogues from Vaishṇavism, have, even down to the present times, quite thoroughly permeated the daily religious observances (e. g., the *Samdhya*) of the average Hindu, "who can be, from the nature of these observances, unmistakably classed as a Śaivite or a Vaishṇavite or a Śākta, even though he personally may not be swayed by any sectarian narrowness, and may carry his cultured indifference in regard to these and the other religious observances to the length of denying all religion as such." Śaivism has thus a long and checkered past, and possesses untold possibilities for the future. Its significance in the pre-historic period of Aryan migrations is being only in the last few years recognised to the full.

—Sūtra 37, line 13. — It is obvious that Śāṅkarāchārya's refutation in the present *adhikarana* can apply only to those schools of Śaivism that do not eventually imply monism. This was the case with the earlier "Āgamas" where Śiva or Maheśvara played only a subordinate rôle, his wife Śakti exercising the cosmic functions in a predominant manner. The Śākta Āgamas (of which a traditional list of 77 has been enumerated) carried the same tendency to its extreme. As a compromise there ensued the later Śaivite systems where Śiva and his consort form but one body. Of such a nature are most of the Dravidian and Kāśmīrian schools of Śaivism, which, accordingly, fall outside

* There are not really two schools, the one founded by Vasugupta (cir. 800) and the other by Somānandanātha (cir. 900), as was imagined by Bühler. "Spanda" is the ultimate principle of spontaneous *vibration* accompanied by consciousness, which creates the world. "Pratyabhijñā" is the discipline consisting in unbroken *recognition* of the identity between Jīva and Śiva, which leads to salvation.

the sphere of Śaṅkarācārya's present attack. What answers most closely the description of Śaṅkarācārya is the system of Lakuleśa or Lakulīśa, (as he is more usually called) who is credited with the authorship of a work called "Pañchārtha" or "Pañchārtha-vidyā." Regarding the five categories recognised by the school the following explanations are offered by the Sarvadarśana-saṁgraha (vi. 62ff.)—

अस्वतन्त्रं सर्वं कार्यम् । तत् त्रिविधम्—विद्या, कला, पशुश्चेति । तत्र पशुगुणो विद्या । सापि द्विविधा, बोधाबोधस्वभावभेदात् । चेतनपरतन्त्रत्वे सत्यचेतना कला । सापि द्विविधा, कार्याग्न्या कारणान्या चेति । तत्र कार्याख्या दशविधा, पृथिव्यादीनि पञ्च तत्त्वानि रूपादयः पञ्च गुणाश्चेति । कारणस्या त्रयोदशविधा, ज्ञानेन्द्रियपञ्चकं कर्मेन्द्रियपञ्चकमन्तःकरणत्रयं च । पशुत्वसंबन्धी पशुः । सापि द्विविधः, साञ्जनो निञ्जनश्चेति ॥ समस्तसृष्टिसंहारा-
नुग्रहकारि कारणं महेश्वररूपम् । तस्यैकस्यापि गुणकर्मभेदापेक्षया विभागः ॥ चित्तद्वारेणात्मेश्वरसंबन्धहेतुर्योगः । स च द्विविधः, क्रियालक्षणः क्रियोपरमल-
क्षणश्चेति ॥ धर्मार्थसाधकव्यापारो विधिः । स च द्विविधः, प्रधानभूतो गुणभूतश्च । तत्रायः, भस्मस्नानशयनोपहृत्तपप्रदक्षिणात्मकं व्रतम्, काथनस्पन्दनमन्दन-
शृङ्गारणावितत्करणवितद्वायणात्मकानि द्वायाणि च । द्वितीयस्तु अनुनान-
भैक्ष्योच्छिष्टाशननिर्मात्यधारणादिः ॥ दुःखान्तो द्विविधः, समस्तदुःखनिवृत्तिः,
पारमैश्वर्यप्राप्तिश्च ॥

Under "upabāra" are included the peculiarly Śaivaite practices such as—

हासेतगीतनृत्यहृदुकारनमस्कारजपाः ।

while the "dvāras" included certain aberrations in practice in the matter of sex, speech and drink.

—Sūtra 37, line 14f. —Regarding the recognition of a God in the Vaiśeṣhika philosophy, vide our Note to II. ii. 12, line 31 (page 82 before).

—Sūtra 37, line 19. —The Lakuleśa-Pāśupata, Śaiva, and Pratyabhijñā schools differ from each other in regard to the extent of the causal efficiency of Śiva. The Pāśupata school maintains that Śiva is a cause independent of the Karman of

the individual soul; the Śaiva or the Siddhānta school regards Śiva as the cause in consonance with and not independent of the world's Karman*; while the Pratyabhijñā school maintains that Maheśvara creates the universe by the mere force of His desire.

—Sūtra 37, lines 20-22. — It will be noticed that the “*itaretarāśrayatva-dosha*” and the “*andhaparamparā-dosha*” have been already urged against the Vedāntic position in Sūtra II. i. 35, while the “*prayojanābhāva*” formed the topic of the 11th Adhikaraṇa (II. i. 32-33) of that same Pāda. The superiority of Śāṅkarāchārya's position as compared with that of his opponent consists, in the first place, in the Scriptural authority which the Āchārya naturally claims exclusively for himself, and, secondly, in his *ultima ratio* of the “*ajāti-vāda*.” — It may be pointed out here in passing that the argument in II. i. 34ff. recurs in Brahmasūtra II. iii. 41f. The wording of the latter sūtra—

कृतप्रयत्नापेक्षस्तु विहितप्रतिषिद्धवैयर्थ्यादिभ्यः ।

as well as the general argument is so similar that one wonders why the author of the Brahmasūtras was led to repeat it in such close proximity. I have elsewhere suggested (Basu Mallik Lectures, Pt. 1, pp. 144ff.) that the discussions about the nature of the individual soul and the Absolute Self in Br. Sū. II. iii, and III. ii, respectively, are later additions.

—Sūtra 37, line 27f. — Compare Yogasūtra i. 24, quoted by us on page 190 before. It is clear of course that this part of the refutation is directed against the Śeśvara-Sāṅkhya, rather than against any specific Pāsupata school.

—Sūtra 38, line 1ff. — The sūtra is not present in the Sūtra-pāṭha as preserved by Rāmānuja, Śrīkaṇṭha, and Bhāskara: the other Bhāṣhyakāras give it. As Śāṅkara interprets it, it seems somewhat unconnected with the “Pāsupata” refutation.

—Sūtra 38, line 3f. — For Sanyoga see Note to II. ii. 17, line 32ff. Samavāya was already refuted in II. i. 18²⁹⁻³⁵, and else-

* “His dependence on the Karman does not detract from his independence any more than the King's dependence on the guards to protect the capital detracts from the royal power.”

where. The other sambandha, the commentators suggest, might be “yogyatā.”

—Sūtra 38, line 10. — An “Āgama” is generally divided into four pādas—

विद्याक्रियायोगचर्याख्याश्चत्वारः पादाः । पतिपशुपाशानां स्वरूपनिर्णयो विद्या ।
अनेकविधसाङ्गदीक्षाविधिः क्रिया । जपध्यानादिर्योगः । विहिताचरणनिषिद्धवर्ज-
नात्मिका चर्या ॥

Compare also Sarvadarśana-saṁgraha, vii. 178f.—

शैवागमेषु मुख्यं पतिपशुपाशा इति क्मात् त्रितयम् ।

तत्र पतिः शिव उक्तः पशवो ह्यणवोऽर्थपञ्चकं पाशः ॥

The Āgamas are highly prized by the Śaivas, and the literature bearing upon them is vast and only partially made available in editions and translations. The Śaivas refuse to accord an inferior rôle to the Āgamas by the side of the Vedas. They assert that the Vedas are general, the Āgamas special treatises. Hence, the Vedas which are often meant for the ordinary layman have to be discarded when they go against the teachings of the Āgamas. Śrīkaṇṭha, in his commentary on the sūtra, in fact says—

वयं वेदशिवागमयोर्भेदं न पश्यामः । वेदेषु शिवागम इति व्यवहारो
युक्तः, तस्य तत्कर्तृकत्वात् । अतः शिवागमो द्विविधः, त्रैवर्णिकविषयः सर्व-
विषयश्चेति । वेदस्त्रैवर्णिकविषयः, सर्वविषयश्चान्यः, उभयोरेक एव शिवः कर्ता ।
अतः कर्तृसामान्यादुभयमप्येकार्थपरं प्रमाणमेव ॥

—Sūtra 38, line 11f. — Apparently Śaṅkarācārya here intends to imply that to the Vedāntins the Vedas are eternally self-subsistent, “apauruṣeya,” and so eternally valid. The Vedas are not valid *because* they are the work of an omniscient person. This last is the Vaiśeṣika position, while the former is that of the Pūrvaṁimāṁsā, which Śaṅkarācārya is not averse to accept whenever convenient. Compare the “Mantravarṇa” cited in II. i. 36¹⁶, and contrast II. i. 14⁶⁷.

—Sūtra 39, line 2 f. — Śaṅkarācārya in his first interpretation of the sūtra takes adhiṣṭhāna to mean support or substrate; and since the Pradhāna is without the qualities of colour etc. he

argues that it cannot be the proper *adhiṣṭhāna* for the Lord. In his alternative explanation he takes *adhiṣṭhāna* to mean body and says that in the absence of a body the Lord would be unable to manipulate matter. Rāmānuja, Śrīkaṇṭha and others combine the two interpretations by declaring that the bodiless Lord cannot have anything as his substrate, whether it be with or without qualities. As regards the line of argument followed, the Bhāmatī says—

यथादर्शनमनुमानं प्रवर्तते, नालौकिकार्थविषयमितीहापि न प्रस्मर्तव्यम् ।

—Sūtra 40, line 1ff. — In the first interpretation the affix *va!* is taken in the sense of *like*: as is the soul with reference to the Indriyas, which, being atomic, have undeveloped or non-manifest qualities, so too is the Lord. In the second interpretation, *va!* is understood as a possessive termination, meaning Indriya-endowed [body.]

—Sūtra 41, line 18. — The arguments urged in this refutation are by no means very profound. They can be even stated to be fallacious; for, when we infer fire from smoke we do not say that because in the kitchen a fan was used to kindle the fire therefore the mountain also must have a fan. This is true; but the very fact that the system is unable to withstand even such arguments shows how very weak it really is, says the *Kalpataruparimala*—

सामान्यतोद्दृष्टानुमानोपन्यासस्तु ईदृशेनासारतरेणाप्यनुमानजातेन दूषयितुं
शक्यत्वादत्यन्तुच्छः पक्ष इति द्योतनार्थम् ।

Śrīkaṇṭha however says that this refutation must not be held to apply to the Pāsupata system as a whole, but only to certain parts of it; or rather, to no part of the Pāsupata system, but to the Sēśvara Yoga system propounded by Hiraṇyagarbha—

शिवागमैकदेशे शिवस्य परब्रह्मणः केवलनिमित्तत्वमुपपादितम् । तत्परि-
हारार्थमिदमधिकरणमिति पूर्वाचार्याणां व्याख्या । । केवलेश्वरनिमित्तत्व-
वादिरिष्यगर्भोक्तयोगस्मृतिविषयमिति वयं वदामः । । सर्वथा न
केवलमीश्वरो निमित्तमित्यस्माकं राद्धान्तः ।

Śāṅkarācārya himself makes it a rather general refutation, so that anybody may wear the cap whom it fits.

—Sūtra 42, line 4. — Compare Sūtra 37, line 3ff.

—Sūtra 42, line 8. — On the origin of the “Pāñch-rātra” system, which is the topic of the present *adhikaraṇa* in the opinion of all the *Bhāṣhyakāras* save two (Madhava and Nimbārka), important light was shed by Sir R. G. Bhandarkar, first in his Report for the Search for Sanskrit Mss, 1883-84, then in the paper submitted by him to the Seventh International Congress of Orientalists at Vienna, and finally in his work on *Vaiṣṇavism Śaivism and Minor Religious Systems*, Strassburg, 1913. The main points of his thesis are—(1) The doctrine of *Bhakti* or devotional worship to a Supreme Divinity was known to Pāṇini (7th century B. C.) and can even be detected not only in the *Svetāsvatara Upanishad* where the word first occurs (albeit in a concluding stanza which looks like an addendum), but even in some of the *Rigvedic* hymns, particularly those addressed to Varuna. — This has been now generally conceded, and the view propounded by Weber and others as to India's indebtedness to Christianity for this doctrine of *Bhakti* finds no advocate now-a-days. It has in fact been recognised that it was in the course of the development of the worship of the Sun-god as Vishnu-Nārāyaṇa, and of Rudra-Śiva, that we meet with the highest expression of the Indian religious thought in the shape of *Bhakti*, or rather of Pantheistic-monism. And if in the origins of this faith any influence from outside the pale of orthodox Aryan thought is to be brought in, it should rather be sought for in the pre-Aryan cults of worship of the several local gods and godlings, which were capable of arousing in the mind of the worshipper the requisite mood of awe and submission. The second point made is: (2) The *Kṣatriya* race of the *Sātvatas*, otherwise known by the name of *Vṛishni*, originated, some centuries before the time of Pāṇini, a new religion of devotion by raising their eponymous hero Krishna-Vāsudeva of the *Mahābhārata* fame, his brother Baladeva (alias *Samkarshaṇa*) and his two descendants, Aniruddha and Pradyumna to divine honours. This religion steadily rose in importance so that at the time of the rise of Buddhism there were in existence, besides Buddhism itself, two other important religions, (Jainism and the *Bhāgavata* religion of *Bhakti*, equally opposed to *Brāhmaṇism*, and alike founded by the *Kṣatriyas*. — This part of Bhan-

darkar's argument is also generally conceded. Thirdly (3), in the course of the prolonged struggle between Brāhmaṇism and Buddhism and the pre-Buddistic "Heretics," the former found it to their interest to make an alliance with the Bhāgavata religion, and in the process of doing so, the Brāhmaṇas identified Vāsudeva with Nārāyaṇa, which was the name given to the Supreme Being in the later Brāhmaṇa period, as also with Viṣṇu—originally an aspect of the Sun-god—who, along an independent line of development, was concurrently being raised also to the position of the Supreme Being. — The line of evolution herein postulated is a legitimate working out of a tendency first seen in what Max Müller styles "henotheism," afterwards accentuated in the Brāhmanic doctrine of the mystic correspondences (bhaktisāhacharya or bandhutā)* obtaining between divinities and their varied paraphernalia of worship, and ultimately culminating in the full-fledged doctrine of the "avatāras." And several gods like Khandobā or Viṭhobā are being identified with Śiva or Viṣṇu in more recent times in accordance with the same process of thought. Fourthly (4), when, in the first two centuries of the Christian era, a colony of Ābhīras from central Asia migrated into India, they brought with them certain Christian notions and legends connected with the birth of Christ and the miracles of his childhood, which added to certain subsequent developments made on the luxuriant soil of India, resulted in the well-known stories of Gopāla-Kṛishṇa, the cowherd-boy of Gokula, which are to be met with only in the Harivaṁśa, the Viṣṇupurāṇa, the Bhāgavata and other subsequent literary works—the portion of the Grāt Epic where allusions to the doings of Kṛishṇa in his boyhood occur being put down by the distinguished Orientalist as later interpolations. We have already a mention of Kṛishṇa-Devakīputra, the ardent pupil of Ghora-Āṅgīrasa in the Chhāndogya iii. 17. 6; and this Kṛishṇa is probably the same as the astute politician of the Mahābhārata, and the religious teacher of Arjuna: but his identification with the Gopāla, the child-god of Gokula, was made only after this immigration of the Ābhīras.—This

* For the "Bandhutā" theology of the Brāhmaṇa texts, its presuppositions and ulterior developments, reference may be made to Belvalkar-Banade's *The Creative Period*, Chapter II, Sections 24–25.

last part of Sir Ramakrishna's theory is frequently called into question. Patañjali mentions the Ābhīras (vol. I, p. 252) and so they must have come into India at least a couple of centuries before Christ. Hence, if the legend of the cow-herd boy is of Christian origin, it could not be the Ābhīras who brought it in. As rivals to the Ābhīras in this respect, the Gurjars who had an early settlement in the north-west of Punjab, and who gave their name not only to the Gujrānwālā district of Punjab, but also to at least four "Gujarāts," are at times put forward. The Gurjars it is believed had acquired some tincture of Christianity from their neighbours in Central Asia, and they naturally propagated their ideas in the course of their advance into the interior of India. The case nevertheless stands so far unproven.

—So much as to the origins of the Bhāgavata or Pāñcharātra religion. The oldest account of its tenets is contained in the Bhagavadgītā, which, according to Garbe, was originally a Krishnaite theism grounded upon Sāṅkhya-Yoga philosophy, and was subsequently worked over in the interest of Vedāntic pantheism.* Before long not only the later sectarian Upanishads, but likewise independent "Saṁhitās" came to be written inculcating the philosophy and ritual of the sect. Over two hundred such Saṁhitās are known by name, the oldest of them dating from at least the early centuries of the Christian era. The best account of the contents of these texts is given by Schrader in his "Introduction to the Pāñcharātra," Adyar, 1916. A normal Saṁhitā treats of four topics: Jñāna or philosophy, Yoga or disciplinary practices, Kriyā or construction of temples and dedication of images, and Charyā or prescribed religious and social observances. The Pāñcharātra probably originated in the North of India and subsequently spread to the South, where it brought into existence a mass of controversial literature written in Sanskrit by a series of Vaishṇava teachers known as Āchāryas (amongst them Yāmuna and his pupil Rāmānuja), as also an extensive devotional literature, mostly in Tamil, composed by

* Holtzmann considered the pantheistic part of the poem as the earlier. Hopkins' formula is longer and puzzling: He calls the poem as being "at present a Krishnaite version of an older Vishnuite poem, and this in turn was at first an unsectarian work, perhaps a late Upanishad."

Dravidian saints known as Ālvārs, whose collected writings are often spoken of as the "Vaishṇava" or Tamil Veda. As was perhaps inevitable, there arose a number of minor differences in the philosophical position and the ritualistic practices of the schools, producing in time the Viśiṣṭādvaita theory of Rāmānuja (1017–1137), the Dvaita theory of Madhva (1197–1276), the Dvaitādvaita theory of Bhāskara (perhaps cir. 1050) and of Nimbārka (died cir. 1162), and the Śuddhādvaita theory of Vallabha (1479–1531). Most of these Āchāryas were natives of the South, although their activity in later life was spread over other parts of India. And concurrently with these religious awakenings of the South, there took place similar awakenings in Bengal, Bihar and adjoining Provinces, under the lead of Rāmānand (1299–1410), Vidyāpati (cir. 1400), Kabīr (1440–1518), Chaitanya (1485–1533), Sūradās (1483–1563), Tulsīdās (1532–1623), Dādu (1544–1603) and others; in Gujarāt under the lead of Narasimha Mehta (1415–1481), Mirābāī (1403–1470), Bhalap (1434–1514), Akhā (1615–1675), and Premānand (1636–1734); in Karnatak under Narahari Tīrtha (died 1333), Purandara Das (1491–1564), Vijaya Das (1687–1755), and other representatives of the Dāsakūṭa (= Bhaktipantha); as also in the Mahārāṣṭra under our own saints Jñāneśvara (cir. 1290), Nāmadeva (born 1270), Ekanātha (1548–1599), Tukārāma (1607–1649), Rāmadāsa (1608–1681), and the rest. There is thus an extensive record of achievement to the credit of the Pāñcharātra *alias* the Bhāgavata religion, and the chapter of that record cannot by any means be said to be closed yet. Next to the Gīta, the Bhāgavatapurāṇa is the most authoritative work, which is even recognised (along with the Gītā, the Upanishads, and the Brahmasūtras) as their fourth "Prasthāna" by most Vaishṇava philosophers. The Bhaktisūtras attributed to Śaṇḍilya and to Nārada are much later productions.

—Sūtra 42, line 9ff. — The "Vyūhas" or Modes have a cosmological as well as a psychological aspect. Cosmologically the Vyūhas mark the four stages of world-emanation as proceeding from the Highest Being. This Highest Being is endowed with "Shāḍguṇya" or the six qualities of jñāna, aiśvarya, śakti, bala, virya, and tejas, which in their totality make up the body of the Highest Vāsudeva. In the Vyūhas only two out of the

six qualities are specially emphasised, and by the help of them the Vyūhas initiate the creative process by originating nascent distinctions, putting forth the duality of Purusha and Prakṛiti, and bringing about an all-round growth and movement in the cosmos. From the psychological point of view the Samkarashana is the individual soul, the Pradyumna the Manas, and Aniruddha the Ahankāra. —The four Vyūhas give rise to three sub-Vyūhas each, the resulting twelve Vyūhas being the first twelve out of the twenty-four names—Keśava, Nārāyaṇa, etc. with which the orthodox Hindu begins his daily “Samdhya.” —The doctrine of the Vyūhas is found in the “Nārāyaṇīya” section of the Mahābhārata (xii. 347. 30-40), but it is altogether unknown to the Gītā. It would also seem that originally only the first two Vyūhas were recognised.

—Sūtra 42, line 13 f. — The terms are thus defined—

वाक्कायचैतसामवधानपूर्वकं देवतागृहगमनमभिगमनम् । पूजाद्रव्याणामर्जन-
मुपादानम् । इज्या पूजा । स्वाध्यायोऽष्टाक्षरादिजपः । योगो ध्यानम् ॥

—Sūtra 42, line 26. — It will be remembered that the Bhāgavata conception of Moksha was the soul's *permanent* abode in Vaikuṇṭha, and not a merging of the individual soul into the Supreme Soul without leaving behind any consciousness of individuality.

—Sūtra 43, line 2 f. — The attack contained in the first two sūtras of the present adhikaraṇa is interpreted in the same manner by all the Bhāshyakāras except Madhva, Nimbārka and Vijñāna. The two latter Bhāshyakāras (and particularly Madhva) interpret the first sūtra (*i. e.*, 42) as an attack against the view that the Lord's Śakti might be the creator of the world *independently*. A female-being like Śakti cannot by itself create anything. If you join the Śakti with the Lord, who is the active agent in creation, it is clear that before the Lord the Kartṛi can do anything, he must have a karaṇa or body and limbs, which he has not (sūtra 43). And if you endow the Lord with both body and power of seeing (vijñāna), that amounts to accepting (apratishedha) “our own” theory. The last sūtra is a condemnation in general terms.—Rāmānuja is alone in making the last two sūtras a reply to the pūrvapaksha in the first two sūtras, so that the Pāñcharātra

system, being cured in its few vulnerable points, stands uncondemned. Śaṅkara, Bhāskara, and Vallabha have made the *adhi-
karaṇa* condemnatory throughout. Śrīkaṇṭha comes midway. While he makes sūtra 44 a refutation of the attack in sūtras 42 and 43, he nevertheless makes the last or 45th sūtra a general condemnation of the system on other grounds.

—Sūtra 43, line 4. — Would not the spider producing threads out of himself have been an adequate *drisṭānta*? Compare the Bhāshya on II. i. 25.

—Sūtra 44, line 3. — The Mahābhārata (xii. 347) explicitly declares—

यो वासुदेवो भगवान् क्षेत्रज्ञो निर्गुणात्मकः ।
ज्ञेयः स एव राजेन्द्र जीवः संकर्षणः प्रभुः ॥
संकर्षणाच्च प्रद्युम्नो मनोभूतः स उच्यते ।
प्रद्युम्नायोऽनिरुद्धस्तु सोऽहंकारः स ईश्वरः ॥

—Sūtra 44, line 5. — The word "tat" in the sūtra refers, according to Rāmānuja and Śrīkaṇṭha, to "Pāñcharātraprāmānya," according to Śaṅkara and Bhāskara, to the "asambhavadoshā" urged in sūtra 42; while Vallabha who, not unlike Śaṅkara and Bhāskara, finds a condemnation of the Pāñcharātra system in all the four sūtras, understands by "tat" the Vyūhas, who, being now regarded as endowed with Vijñāna and the other *guṇās* of the Supreme Lord, will each of them be an independent Sovereign upon whose sweet will there can be no restriction imposed. The simultaneous existence of more than one Omnipotence can always be proved to be a logical inconsistency. — I think that there is a much more satisfactory way of interpreting the sūtra. Sūtra 43 having urged that from Saṅkarashapa, the agent, Pradyumna, the mind cannot originate, sūtra 44 says—if, as an alternative supposition, Pradyumna is not a "Karaṇa" but is identical with Vāsudeva, as being possessed of "vijñāna" and other pre-eminences, then the "Karanatva" ought to have been plainly denied; but "tadapratishedhah," the Karanatva is not discountenanced in the system.

—Sūtra 44, line 13. — Compare II. i. 6, line 18.

—Sūtra 44, line 14. —The name “Pañcharātra” has been variously explained. (1) Rātra signifies a chapter or a topic, as in the familiar Arabian “Nights,” the five topics of a Saṃhitā being either Tattva, Muktipradda, Bhaktipradda, Yaugika, and Vaiśeṣhika; or the five means of Abhigamana etc. detailed in II. ii. 42, line 13, above. (2) A treatise that results in the night-obscuraton, *i. e.*, the confounding of five heretical systems. (3) What cooks (verb, *pach*) the night of ignorance, what illumines. (4) a treatise in which the great Puruṣha offers a sattra for five nights as a means of obtaining pre-eminence in the world and, as a consequence of the sattra, assumes the five-fold manifestations in his Para, Vyūha, Vibhava, Antaryāmin, and Archā forms. This last explanation seems to me to be more legitimate than the others.

—Sūtra 45, line 1ff. —Rāmānuja is alone in turning, what on the face of it is a concluding stroke of the attack against an opposed system, into an actual defence of it. He thus paraphrases the sūtra—

विप्रतिषिद्धा हि जीवोत्पत्तिरस्मिन्नपि शास्त्रे ।

For Rāmānuja's rendering we would expect the sūtra to be “Pratishedhāch cha” and not “Vipratishedhāch cha.” Further, if the “pratishedha” were so explicitly made, what are we to think of the earlier objection which ignored the existence of such an explicit denial? Rāmānuja's interpretation of the adhikaraṇa thus lacks conviction, and yet apparently it seems to have convinced Thibaut, who says (S. B. E. 34, lii)—“It, however, appears, to me that the explanations of the ‘vā’ and of the ‘tat’, implied in Rāmānuja's comment, are more natural than those resulting from Śāṅkara's interpretation. Nor would it be an unusual proceeding to close the polemical pāda with a defence of that doctrine which—in spite of objections—has to be viewed [—by whom?—] as the true one.” The arguments against Rāmānuja's interpretation are quite on the surface: (1) The tone of the whole pāda is “parapakshanirākaraṇa.” (2) The tone of the last sūtra of the adhikaraṇa is decidedly combatative, as of sūtras II. ii. 10, 17, and 32. (3) Rāmānuja's explanation of the last sūtra is anything but satisfactory. (4) If the Sūtrakāra really wanted to defend the Pañcharātra system

he could have done so in a far less unambiguous manner. And finally, (5) Śaṅkara's explanation of the sūtras falling under the *adhikaraṇa* is not, after all, so very objectionable.

—Sūtra 45, line 2 f. — One expects that Śaṅkarāchārya would pick many more holes into the system under cover of this last sūtra than what he has actually done. His "Veda-vipratishedha" is absolutely untenable. Rāmānuja has correctly pointed to the analogous passage in the *Chhāndogya*, VII. i. 2-3, where the "Veda-nindā" by Nārada is not really intended, and says that the words of dissatisfaction put in Sāṅdilya's mouth are merely intended as "vakshyamāṇa-vidyā-prasamsārtham." Rāmānuja writes—

यथैष केषांचिदुद्घोषः.....वेदविरुद्धं तन्त्रमिति, सोऽप्यनाघ्रातवेदवचसाम-
नाकलिततदुपबृंहणन्यायकलापानां श्रद्धामात्रविजृम्भितः ।

—Sūtra 45, line 5. — Śrīkaṇṭha finds, from his point of view as a Śaiva philosopher, another contradiction in the Pāñcharātra system—

श्रुतिविरुद्धेश्वरकारणवादमुक्तिहेतुत्वतस्तमुद्राधारणादिधर्मपरत्वादिना विप्राति-
षेधात् ।

Probably, the Pāñcharātra philosopher would find the "chitā-bhasmacharchā" of the Pāsupata system equally contrary to "Scriptural" commands! As to "Purāṇa" passages proclaiming Śiva, Vishṇu, and the worshippers of each in turn, by all kinds of opprobrious names, they end by cancelling each other, and can never be taken very seriously.

 Gaṇadharas n189.
 Ganges n40.
 Gaṇiavijjā n177.
 Garbe n201.
 Gaudapāda n82n; Śāṅkara's parama-guru n24; a fictitious name n24; theory about a Gaṇḍa school n24; his Kārikās n24, n164; Kārikā quoted 21.
 Gautama Buddha *see* Buddha.
 genus, its existence 43.
 ghāṭikarman, its varieties n186.
 Ghora-Āṅgīrasa n200.
 Gīta-bhāṣhya, quoted n16.
 God, knowable by Sāṅkhya and Yoga 9; his omniscience and omnipotence due to Nescience 37; his power of illusion 38; unjust and cruel 63; his regard to merit and demerit of beings 64; his rain-like attitude 64; as omniscient, creating the universe 74; as controller of the universe 75; his activity and power of cosmic illusion 79; as efficient cause alone 133; of the Theists, not connected

with souls 134f.; has no operating basis n135f.; susceptible to pleasure-and-pain experience 136; as finite 137; non-omniscient 137f.; his Modes in Pāñcharātra 139; cannot create instrument from himself 140; his svabhāva n54; independence n55; his powers n69; his function in Nyāya-Vaiśeṣika n97, n97n; Jain God n180; Yoga • definition of n190; of the Vedāntins n191; in Sāṃkhya-Yoga of the Gṛha n191; his adhiṣṭhāna n198; God and his śakti in Bhāgavata philosophy n203.

Gokula n200.

Gopāla-kriṣṇa n200.

Gotra (Jain) n186.

gourd (ālu), the simile of n187.

grammarians, on the brevity of sūtras n3.

Gṛhyasūtras n57.

Gross-long Analogy, Topic 2 (II. ii. 11) 84f.

Gujarāwālā district of the Punjab n201.

guṇas n61, n75, n83; originating from avyakta 5; their nature 70; their activity 72; their dominance and subservience 79; their number and nature n17; described n65f.

Gurjaras n201.

Hari Dīkṣita n10.

Harivamśa n200.

Harivarman n118.

Hauer n14.

Heaven (Jain) n189.

Hegel n51.

Henotheism n200.

hetupratyayas n124, n127f.

Hīnayāna n30, n31, n155; its schools n117; contrasted with Mahāyāna n117; its characteristics n117f.; its date n118.

Hiranyagarbha n14.

Hinen Tsang n40, n121.

Holtzmann, on Bhagavadgītā n201n.

Hopkins n189, n201n.

hṛdayayatana n50f.

Ideas n157f.; Platonic n40; Buddhist 121; their luminosity 121.

idealism, Buddhist n117; see Vijñānavāda.

ijyā, defined n203.

Ikṣhāna n8f.

illusion, beginning less 21; cosmic 74. *Impartite's Part-modification*, Topic 9 (II. i. 26-29) 55ff.

Inequality and Cruelty, Topic 12 (II. i. 34-36) 63ff.

inherence, see samavāya.

initiation 4.

intimate relation 42; examination of its nature 42f.; see also samavāya. *īraṇa* n122.

Īśa, quoted 7.

Īśvarakriṣṇa n6, n7, n59, n60, n82; see also Sāṃkhyakārikā.

itihāsa n20.

Itivuttaka n116.

Jābāla, quoted 10.

Jacobi n133, n168, n170, n171, n172, n178.

Jaimini n8, n169.

Jaimini-sūtra, quoted 6, 57; n16, n19. see also mīmāṃsāsūtra.

Jains, their refutation 127ff., their categories 127; their dress etc. n173; their canon n174ff.

Jainism, origins and historical development n173ff.; its soul-theory n174; its estimation n174; outline of the system n178ff.; ontology n179; system compared with Sāṃkhya n179f.; its classification of Karman n186; more a religion than a philosophy n189; Hopkins' estimate of it n189f.

Jambuddīyapaṇṇatti n276.

jarāmaraṇa n130.

Jātakas n116.

jāti (Vaiśeṣika) defined and described n40; its perception n99.

jāti (Buddhist) n130, n157.

Jayasinha n42, n43.

Jiva (Jain) n178; Jain classification of n184; see also Soul (Jain).

Jīvājivābhigamasūtra n176.

jñānavarāṇi n186.

Jñāneśvara, his date n202.

Jumna n40.

Kabir, his date n202.

Kāla (Jain category) n178.

Kāśamukha n193.

Kalpataruparimāla, quoted n198.

Kammappavaya n175.

Kaṇḍa 24, 87; n97, n104; derivation of his name n25.

Kanishka n119.

Kant n51.

Kantian view n44.

Kāpālika n193.

Kapila, founder of the Sāṅkhya system 4, 5, 24, n6, n7; the purpose of his Smṛiti, 4 his perfect knowledge 6, not reliable when he contradicts śruti 6; *alias* Vāsudeva 7; on plurality of Selves 7; his theory running counter to Veda 7; his incidental mention in Śvetāśvatara n9; the tawny-coloured being n9; who burnt the sons of Sagara n12.

Kappāvadamsikāo n176.

kāraṇakavyāpāra n41.

kāraṇa, upādāna and nimitta n5;

Vaiśeṣika n98f; defined n106;

Kāraṇa (Śaiva artha) n195.

karman 66; of the individual souls 19; its beginninglessness 65; fluid 106; its Jain classification n186f.

Kārmaṇa n184, n189.

Kāruka n193.

Kāruṇika n193.

kārya, defined n106.

Kāryakāraṇabhāva (Buddhist) n140; *see also* causation (Buddhist).

kāryakāraṇa n18.

Kātha 9, 17, n14.

Kathāvatthu n116.

Katyāyaniputra n119.

Kaushitaki-Up. 14, 64, n18, n34, n54f.

Kauṭilya n83, n113.

Keith, A. B. n74, n121, n184.

Kesava (Lord) n203.

Kesāvakaśmīrin n20; differences in sūtra-interpretation n46, n164.

Kevalāvidyā n55.

Khandhakas n115.

Khaṇḍobā n200.

khara n122.

Khuddakanikāya n116; books of the n116.

Khuddakapāṭha n116.

Kiraṇāvalī n113.

Kiriyaśāla n175.

Knowledge, intuitive 17; its attributes n160; in Vjñānavāda n162.

Krishṇa n200; Devakīputra of the Chhāndogya n200; of the Bhārata n200; religious teacher of Arjuna n200; his identification with Gopāla-Krishṇa n200.

Krishṇa-dvaipāyana n27.

Krishṇagupta n42, n43.

Krishṇa-Vāsudeva n119.

kriyāpāda n197.

Kriyāvāda n175.

Kṣetrājña 5; defined n9.

Kṣṇāṇḍīla p171, n181.

kuṇḍabadaṇanyāya n109.

Kūranārāyaṇa n24.

Kūṭastha n33.

Kūṭaṭṭho (Buddhist word) n33.

Lakṣhaṇa n35; svarupa-lakṣhaṇa n35; tāṭastha-lakṣhaṇa n35.

Lakṣhaṇā n26.

Lakuleśa n193, n195.

Lenciippus n87.

Lēvi n166.

Līṅga, defined and interpreted n15.

Logavindusāra n175.

Logicians n25.

Madhva, his dvaitavāda n49; his date

n202; difference in sūtra-interpretations n13, n14, n22, n27, n44,

n45, n47, n48, n52, n53, n70, n71,

n72, n74, n75, n76, n84, n96, n146,

n152, n154, n167, n188, n199, n203.

Madhyamakāsūtra quoted, 159, n168.

Madhyamaka school n166, n172.

magician and his magical creation 21.

Mahābhārata n10, n196, n203; Sāṅ-

khyā in, n83; quoted 5, 7, 17, 57;

n12, n94, n204.

Mahānīstha n177.

mahat 8, 76, 79; n13f., n61, n77.

Mahāpachchakkhāna n177.

Mahāvagga n115.

Mahāvīra n179; his date n173;

tempers agnosticism n182.

Mahāyāna n117, n155, n172; its chara-

cteristics n117f; its date n118.

Mahāyānasūtrālaṅkāra, quoted n163.

see also Aśaṅga.

Māheśvaras 133, n191; their cate-

gories 133, n191ff.

Majjhimanikāya n116.

Majjhima paṭipadā n166.

mana-āyatana n121.

mantras n29; defined and described

n18f.

Manu and Manusmṛiti 4, 7, 24, 27; n6

n15, n12, n27.

Materialists 73, n32.

Māṭhara n36, n12, n82n.

Māthurā n39, n40.

- Maudgalāyana n119.
 Maya, Asura n156.
 Māyā and Māyāvādins n53,* n54, n55, n73, n74, n78, n79, n81, n159, n164, n165, n172, n181.
 means of knowledge, negatory in the Absolute 32. . . .
 Menander, king n149. . . .
 Milinda, king n149.
 Milindapañha n112, n116; quoted n148f.
 Mīmāṃsā, theory of authority n12f; view of the world n55; its injunctions n56.
 Mīmāṃsāsūtras n51, n169; their purpose n57; quoted n8, n10, n34, n36; *see also* Jainisūtra.
 Mīrātai, her date n202.
 modes (vyūhas) n202f.
 mohaniya n186.
 moksha, its nature n30; in Vedānta n149; in Jainism n178; Bhāgavata conception of n203.
 momentariness (Buddhist) 46, 107, 108, 112, 113, 125f; n44, n142, n144, n146, n147, n151, n160; its modern revival n152.
 monads (Buddhist) n112.
 Muktiāvali n114.
 muktiprada n205.
 Mūla-sarvāstivādins n119.
 Mūla-sūtras (Jain) n177.
 Müller, F. Max n200.
 Muṇḍaka n29; quoted 21, 30, 55, 60.
 Nāgārjuna n113, n118, n155, n159, n167, n168.
 naigama (Jain) n182.
 Naiyāyikas n99, n101.
 Naishkarmyasiddhi n186.
 Nakuleśa n193; *see* Lakuleśa.
 nāma (Jain) n186.
 Nāmadeva, his date n202.
 namarūpa n130, n134.
 name and form, fabrication of Neuroscience 36, 37.
 Nānappavāya n175.
 Nandisutta n178.
 Nārada, Bhaktisūtras of n202.
 Naraharitīrtha, his date n202.
 Narasimha Mehta n202.
 Nārāyaṇa, the creator of the world 5; identified with Vasudeva Sātvata n200.
 Nārāyaṇīya section of Mahābhārata n203.
 navya-nyāya n114.
 Nāyadharmakāśa n175.
 Nāyas, Seven (Jain) n182f.
 Negativism, *see* Śūnyavāda.
 nescience, its superimpositions 21; its distinctive classifications 22; its fabrications 37, 58; in Buddhism 105, 106.
 Nettippakaraṇa n116.
 Nidānas 104f., n130; their relation to Saṃkhyatattvas 133, 134, 135; *see also* Pratītyasamutpāda and avidyā-causation.
 Niddesa n116.
 nigganthalas n174.
 Nihilism in Buddhism 103.
 Nimbārka n55; his date n202;—differences in sūtra-interpretation n13, n22, n27, n45, n47, n48, n53, n70, n71, n72, n76, n84, n135, n146, n167, n189, n197, n203.
 Nirayāvali n176.
 nirodha n140, n145, n149; *see also* Pratīsaṃkhyā- and Apratīsaṃkhyā-nirodhas.
 nirganthalas, *see* nigganthalas.
 nirjara (Jain) n178.
 Nirukta n41, n169.
 nibbāna 104; n125, n144, n149; as ahetuja n148; as nirhetuka n149.
 niśchaya-naya n182.
 Niśibhajbhāyana n177.
 Noble Eight-fold Path n149.
 non-creative sublation *see* Apratīsaṃkhyā-nirodha 109.
 non-existence and existence 40, 41.
 nyāya, its meaning discussed n6.
 Nyāyabhāṣya, quoted n95.
 Nyāyakandalī n113; quoted n76, n108f.
 Nyāyakusumāñjali n113.
 Nyāyamāñjarī, quoted n147.
 Nyāyasāra n113.
 Nyāyasūtra 114, n98, n133, n153, n169; quoted 134.
 Nyāyavarttika n113.
 Nyāyavarttika-tātparyā-parīśuddhi n113,
 Nyāyavarttika-tātparyāṭikā n113.
 Objects, external, denied by Vijñānavāda 117ff.
 Objects Turned Subjects, Topic 5 (ii. i. 13, 27f.
 Ohanijjuttī n177.
 Ovavāṇīya n176.

Overlord, omniscient, as originator, controller and absorber of the world 3; *see also* God.

Pachchakkhānappavāya n175.

Pāchittiya n115.

Padmapurāṇa n83; quoted 7.

Pakudha Kachchāyana n112.

Pāli Canon n115f.

Pāṇāṣmī n175.

Pāñchasikha n7, n75, n94.

Pāñchurātras, their refutation 139ff; their Modes 139; contradictions in 141f; origins and history of n199ff., n201; its derivation n205; *see also* Bhāgavata.

Pāñchakalpa n177.

pañchārtha n195.

Pāṇḍavas n156.

Pañhāvāgarāṇāi n176.

Pāṇini n15, n40, n169, n199.

Pāṇḍavāṇā n176.

para (a form of Lord's manifestation) n205.

parā-dovata n53.

Parājika n115.

paramarshi (Kapila) n6.

paramārthasatya n171.

pāramārthika (truth) n45, n46.

paratantra (satya) n159, n161.

parikūlpita (satya) n159, n161.

parimitatva n65.

parināma n24, n29, n70.

parināmi-nityatva n179, n185.

parinishpanna (satya) n159, n161.

Parivārapāṭha n115.

Pārśvanātha n173.

Pāśupata n193, n196; its founder n193; its different schools n193; *see also* Māheśvaras and Śaivism.

Pāśupatasūtrī, also called Śaiva Smṛitī n13.

Pāṭaliputra 43, n39; the Jain Council of n178.

Patañjali n15, n39, n40, n190, n191, n201.

patichchasaṃmupāda, *see* pratītyasaṃmupāda.

Patimokkha (of the Mūlasarvāstivādins) n119.

Paṭisambhidāmagga n116.

Paṭṭhānappakarāṇa n116.

Peṭakopadesa n116.

Potavattlu n116.

perolpiont and perception n162.

phallic worship n192.

Piṇḍa-nijjuttī n177.

Piṅgala n169.

Prābhākaras n94.

Prabodhachandrodaya n139.

Pradhāna 3, 8, 36, 133-136, n60; accepted as independent First Cause by the Yoga 9; illogicalities in the theory 22f; disparate effects of 23; its close analogy to Upanishadic theory 26; the theory attacked 59f; its inability to create the universe 70f.; impossibility of activity in 72f.; cannot act 74, 76; cannot be controlled 75; equipoise of the Guṇas in 75; nature of its activity 76f.; no assignable motive for its activity 77f.; pradhāna and soul, their relation 77, 78, 79; a simile for their interrelation 78; is acceptable to Vedānta if endowed with intelligence 80; inert n9; its constituents n17; arguments for the existence of n63; its pravṛtti is inexplicable n67f.; its pravṛtti n69, n71, n72.

Pradhānavādin, not the best Logician 25.

pradyumna n199, n204; a mode of God 139, n203.

Prajāpati and prāṇas 75.

Prajñā-pāramitā n163.

Prakṛti, independent First Principle 7; *see* Pradhāna.

Prāṇas, supremacy among 75: their five varieties and localities n44.

prāṇāyāma, its varieties defined n44f.

prāṇidhāna n190.

prasaṅga-dialectics n100, n107, 155, n159.

Prasastapāda n95, n97, n99, n113, his bhāṣya quoted n87f.

pratisaṃkhyā n147.

pratisaṃkhyā-nirodha 109, n145; defined and explained n142f.

pratītyasaṃmupāda n83, n127, n132, n135; *see also* avidyā-causation and Patichcha-saṃmupāda.

pratyāsatti n15.

pratyayas n141; their kinds explained n141; *see also* hetupratyayas.

pratyabhijñā school n194; its identity with spanda-school n194n; principle n194n.

pravṛtti and apravṛtti n54.
 pravṛttivijñāna n125.
 Premānanda, his date n202.
 production, the process of n43f.
 proofs, their validity and invalidity 120.
 pudgala (Jain) 127, n178, n179;
 theory of the Jainas n112; defined
 n139.
 Puggalapāṇṇatti n116.
 Puppachūliṣa n176.
 Pupphaṇṇa n176.
 purāṇa, its contents n20.
 Purandaradās n202.
 Pūrṇavarmān 45, n42.
 Puruṣa, aupaniṣhāda 10; his un-
 contaminated nature 10; *see also*
 Sāṃkhya.
 puruṣārthas, their varieties n8.
 Puvvas n175.
 Pūrvas, Fourteen n175.

 Rachanā n67, n70.
 rāddhānta n114.
 Rājāsūya n34.
 Rājavarman n42, n43.
 Rāmādāsa n202.
 Rāmānanda, his date n202.
 Ranado n200n.
 Rāmānuja, the Vaiṣṇava teacher
 n201; his date n202; differences in
 sūtra interpretation n13, n22, n23
 n27, n44, n45, n46, n47, n48, n53,
 n55, n67, n70, n71, n72, n78;
 (quoted), n84, n85, n97, (quoted),
 n135, n146, n152f., n167, n188,
 n196, n198, n203 n204, n205.
 Raṅgarāmanuja n58.
 Ratnaprabhā n28, n90, n125, n137,
 n138, n144; quoted n29, n32, n48,
 n92, n127, n139, n145, n191.
 Rāvaṇabhaṣya n30, n113.
 Rayapasevājī n176.
 re-absorption, *see* dissolution.
 realism, Vaiśeṣika n111.
 Reality, its knowledge beyond the
 ken of reasoning 25; its true
 knowledge from untrue Scriptures
 33; knowledge of ultimate reality
 annihilates activities based on
 distinctions 35; its knowledge
 n11; Buddhist reality n120, n121
 (bāhya), n121 (antara).
 reasoning, its scope in Brahman
 knowledge 17; its deceptive nature
 17; its non-stability 23; its worst

possibilities 23f; its jurisdiction
 27; its purpose in Vedānta 69.
Refutation of the Sāṃkhya, Topic 1
 (II. ii. 1-10) 69ff.
Refutation of the Atomic Theory,
 Topic 3 (II. ii. 12-17) 88ff.
